No need to penetrate the copper... all ya' gotta' do is get the pin close enough to cause 'arc-over' and 'POOOOF' goes his rig.

By your logic, I enjoy money, ergo I should be able to walk into any bank and take as much as I want. The current laws against bank robbery are interfering with my joy and by definition are no longer legal.

I have no clue where you come up with your childish rationalizations, but it is time for you to grow up and become a responsible adult.

I've seen these big mobile antennas with one or two helical coils on them.
Im the store they say they handle up to 15,000 watts but people seem to use
them on normal below 100watt cb's. Do they do anything besides handle more
RF output? What are the helical thingies? They look cool:)

11. Re: Help for non-cb'er

Newsgroup: rec.radio.cb
Date: 2001-03-01 00:29:24 UTC
From: The Packrat<illegible> <spam@n7uic.net>
Message-ID: <EJgn6.486610$U46.14576428@news1.sttls1.wa.home.com>
Source record: 74486

I used get into my own speakers but it depended on the weather. Happened more when it's dry out.

What does get rid of it though is wrapping the lead from your sound card to the speakers around a torroid and doing the same for the power cable and the wire that goes to the other speaker.

Teaming/ganging up on someone just pisses them off. Best thing to do is let the person know he is getting into your amplified speakers and ask if he has any low pass filters inline. From there ask if he may have any suggestions on how to get rid of the problem. Running to the playground teacher solves nothing.

"'Doc" <w5lz@oio.net> wrote in message news:3A9C8872.187B7607@oio.net...

Chris,
The 'problem' is probably in the amplified speakers that
you use. Very few, if any, speaker systems for computers
are shielded in any way. The RFI can also be getting into
your computer by other ways. Any port of a computer is
a potential source of RFI (I'd bet on the speakers though).
You can try the common things, ferrite beads, shielded
cables, etc. There's no way of knowing before hand which
(if any) will 'cure' the RFI problem. After doing all that
you can on your 'end', you can try talking to the CB'er. I
have no experience with CB'ers in Canada, so can't give any
advice about them. I can say that a confrontational attitude
will make the problem worse, not better. So, good luck...
'Doc

When you key the microphone you are shorting the mic input to ground. You need to put a resistor between the wire that keys and the tip. This will allow the audio to get through.

you can probably get a diagram if you search on how to hook a packet modem to your HT

here is one for example

http://freeweb.pdq.net/medcalf/ztx/wire/y727.html

"Frizz" <none@none.com> wrote in message news:97f7hvqin1@bob.news.rcn.net...
Doesn't look like I am gonna get a reply from the ham groups and I guess this would fit more over there but I will give this a try anyways. I have an astatic d104 silver eagle desk mic with a 5 pin plug on it wired to a Uniden washington. This mic is interchangeable with several of my other radios with this plug so I must keep in on there. Currently, I am using a Yaesu FT-411 HT for 2m as a base station with a power supply, etc. It is easier to use a desk mic the way I have it set up and I want to use the d104 on the radio. I was using it on there actually, however, I went to make a more permanent connection with a panel mount jack and now the thing won't work. It will key the radio but no audio. I have it wired up with the Red and White wires going to the tip of the HT's mic connector and the Black and Ground going to the ring of the connector. This was how it was wired before but when I went to make the change over, something went wrong and now it won't work. I have rewired the mic plug on the d104, redone the plug going to the radio, cleaned contacts, tried a bunch of different reasonable connections with no luck. So, HOW DO I DO THIS? I am about to throw a d104 out the window and if this doesn't work then I will gladly let someone know where to catch it. Thanks and 73.

PB from KG4 land.

That style of mobile antenna is a type of birth-control device known
as a 'contraceptive'. Mounting one of those behemoths on your vehicle
will destroy any opportunity you may have to get laid. Wives like them
because they insure that their husbands will be faithful. And,
depending upon how much power you run, may also contribute to
sterility.

Source record: 74491

Most of the problems with RS antennas, in fact, a LOT of antennas, were the idiots that put them up.

Not that you're an idiot of course. But sometimes there are obvious, and not so obvious, tricks that should be done.

I put a LOT Of 1/2, 5/8, and even the ".64" antennas from RS and they were great.

But...

You had to wipe the joints first. And you had to SEAL the joints. And, yes, this was a shortcoming, if there were any 'single screw' joints, DRILL them for TWO screws and USE two high quality screws.

I NEVER had an antenna come down from weather or wind in less than 15 years. In fact, the 1/2 wave I put on my parents house in 1976 was there until a serious storm in 1994 or 95. And then it lost it's ground plane, but part of the reason for that was because it was on a chimney, and the smoke (very corrosive) was blowing over the base. (I had no choice in mounting.)

As to the mobile antennas... RS made the decision to build their own cable and most mobile antennas before the big CB boom. That's why they had antennas in stock when no one else did. Or when some 'CB Shops' were selling real junk with PCB ETCHED COILS! Yep, you heard that right!

RS antennas DID have some 'growing pains' especially with new models, but as a general rule, RS antennas were a HELL of a lot better than most of the garbage out there. Would I put a RS antenna up against something like the K40? Well, in performance (I tested the deluxe RS mag mount against a K40 for 10M HAM use) and the RS was virtually NON-DISTINGUISHABLE from the K40. However, the RS antenna DIDN'T work right at first. Seems there was a corrosion/contact issue with the set-screw base.

By the way, MOST (but not all) of the RS antennas were wound with 14ga wire, something a LOT of manufacturers scrimped on (but NOT K40, they really were 'good stuff') but the 'center loaded' versions did use a lighter wire.

Hey, if you want to blast RS for some of the shit they've put
out, do it right, not with BS.

Mike

Well I know the Wilson outperforms any radio shack mobile antenna.
THe ONLY problem with Wilson antennas is the lack of Weatherproofing
on the entry to the magnet base by the coax. Seal it up or it will
get corroded fast.

K40's weatherproofing is Awesome.
Radio Shacks's weatherproofing is good.
Wilson's sucks.

Anyway I own a Wilson 1000 and wetherproofed the magnet base.

Well, then try this: The radio spectrum is a very limited resource, and therefore requires strict regulation. If anyone feels that this regulation is too strict or otherwise unfair, they can attempt to have it changed legally (one of the greatest things about the US).

The first step would be to organize all those that want to run more power and/or have the band enlarged. This would get support from many legal operators as well. Then this organization would petition the government to initiate some reformatory legislation. If it could be shown that an expanded Citizen's Band would cause no harm, and that the operators would adhere to the new regulations, then the FCC would probably relax some restrictions.

But the current, widespread and blatant disregard for existing laws is going to prevent any new legislation. De-facto legislation is not going to happen because of the limited nature of the RF spectrum. It is more likely that the Citizen's Band will be eliminated, to be replaced with either another ham band or auctioned for commercial use.

So to just run power and someday hope for a de-facto law to take effect is absolutely lame.

Sparky, FLRC

Checking or Reading the mail simply means that a monitoring station is
notifying the "band"
that they are 10-8 or in-service so that another party who wishes to make
contact with them
may do so.
Check out the "11meter web portal", lots of good info for you
there.............

A 2meter example: This is KG4LBD monitoring......

Leland,

Here's (above) a telling statement on the differences between *most*
hams and the CBers you(?) call "keyclowns". To one group, it is the
height of "macho" to be able to cover up another station who is trying
to use the frequency. They cannot conceive of the polite standing by
nor NOT using just ANY radio just because they can. To the other, it
is inconceivable to intentionally key down on someone else. Indeed,
that group is so far removed from that concept and actitivy, they cannot
even fathom such infantile doings. Hey, I know where there is a
transmitter (ex-military) that is capable of 6000 watts. Yet, the owner
loafs along at about a KW, which, for him, is perfectly legal. He can
see no reason to call attention to himself or risk his license. The
KW, according to him, is more than he needs usually, and the radio sits
idle most of the time--hasn't even had the filaments on since summer.
Ah, Leland, I believe it is called "discipline", an alien term to some.

Jerry

26. What's the deal with 27.555 & Phoenix ops???

: But the current, widespread and blatant disregard for existing laws is
: going to prevent any new legislation. De-facto legislation is not
: going to happen because of the limited nature of the RF spectrum. It
: is more likely that the Citizen's Band will be eliminated, to be
: replaced with either another ham band or auctioned for commercial use.

1) Doing away with the CB band would do no good at all - without very
strict and enthusiastic legal enforcement. This will not occur, due to
financial concerns - as well as the fact that most of the illegal
operation is hurting no one except other users of the band.

2) I doubt if the Hams would want the band - and have to put up with the
many thousands of illegal users that would remain using the frequencies.

3) The band is pretty much useless for commercial purposes. The Hams are
more likely to lose frequencies in the UHF and above bands.

: So to just run power and someday hope for a de-facto law to take
: effect is absolutely lame.

True. But it does not mean that there is ever going to be any significant
amount of enforcement either.

Dave,

One of the things I hear "rumblings" about is reestablishing enough fund
ing to FCC to do something about this. I know that one thing that is
being done is petitions and letters to various Congressmen explaining
in detail why merely allowing local enforcement is not enough. We
currently DO have enough of a surplus to effectively do so without
making a big dent in gov't surplusses. Why is this important? Why now?
Because if it is NOT done now, then the bandits will roam farther and
farther afield both up and down the spectrum. If a massive, even if
only temporary, effort is not undertaken, hams, utility stations, for-
estry, and aircraft will experience interference from these truckers.
Eventually, this could cause someone to lose their life. What the
uneducated do not realize is that spectrum is divided up for a reason.
It is why users of radio in other HF bands must know, at least, some-
thing about RF propagation and how to minimize interference. When any-
one can walk into an "export" store, buy a radio that will transmit out-
side of the CB bands, that "teaches" nothing about how their actions in
using that illegal equipment would affect THEM if it were someone else
interfering with them. They are operating an appliance, that's all.

No. Most local jurisdictions recognize the contributions hams make to
their emergency communications capabilities. For that reason, when a
state moves to do such, the hams and ARRL lobby (usually successfully)
for an exemption. Another example is, volunteer organizations such as
VFD and Civil Air Patrol where mobile comm capability is ESSENTIAL.
Since CAP operates as a Federal agency due to its status as a USAF
Auxiliary, they'd have a tough time fighting USAF.

While FCC's charter gives them control over all things

QRM,

This is a point I made in another thread. There might be more CBers than users of other services. BUT the activities of the illegal operators encroaching onto other bands is not going to garner the kind of attention the serious, legal CBers want. It is causing ADVERSE attention that *may* create solutions nobody wants. Let's face it: in the grand scheme of things, which is more important? Police, fire, volunteer rescue squads, even Amateur, or CB--and that is NOT a slap. The contribution of VALUE-added service to the community will have far more weight than someone being able to buy what is essentially a "toy". The first volley fired over CBers' collective bows was the "local enforcement" law. It is doubtful that this, in and of itself, will have the desired effect on the illegals. Do you really think it will stop here? The farther afield the truckers wander, the more attention it will draw until enough people get tromped on, their rights to use the spectrum impeded, and something will HAVE to be done. It is better that it is stopped now rather than later. Again, all this illegal stuff *could* have an effect that no one can now foresee or would like.

Jerry

Ken,

I am afraid you are woefully uninformed on the age range of ham operators. That is a CB myth that is brought out in order to insult Amateur Radio as a whole. The age ranges of hams are no different than CBers. They range from 6 to 100! I have talked to MANY an under 10 yr old ham.

So is dope but it is still illegal due to the harm dope does to the persons who use it.

Therefore the FCC MUST change
> the regs to meet the needs of the cb user.

No they must NOT. Here's why. (I am not too happy about saying this, but it's on my mind, so....). 1. CB was never meant to be a hobby altho that is what it has become. 2. It was placed in an area that is suscept ible to "skip". Reason? Because of the technology of the era. And it was cheaper to market. 3. To counteract that, effect, the power res- trictions were put into place. The reasoning was that, even though one could HEAR stations beyond 155 miles, it did not mean that one had to talk to them since CB's purpose was to be a LOCAL, cheap means of per- sonal radio for families, and at one time, business. Talking distance was not needed to fulfil this purpose. That is one reason amplifiers are illegal. Another is that we in the US are not the only users of the radio spectrum. Since it is essential for nations to have cooper- ation in MANY areas, if a nation just does its own thing disregarding the needs of the WORLD community, it will come back to bite you in the butt. International agreements, treaties, and governing, cooperative organizations (like ITU) are entered into by many of the civilized countries throuhout the world. The use of amplifiers by *mostly* un- trained operators on HF frequencies WILL cause headaches (and do) for, not only other users in the US, but other nations as well. Even in the formation of the Citizens Band, the US had to make certain "promises" to the world community in order to remain in good standing with its "neighbors". The concept of an untrained group of people having access to HF frequencies actually goes against the consensus of the world com- munity. All other international HF operators are required to have a certain minimum amount of training in matters relating to HF operations to have access to it. That relates to the use of amplifiers as well. While it occurs on other bands (usually unintentional), we cannot deny that more interference occurs between CB ops than anywhere else--and that even includes the rogue hams that do such. This immature activity degrades the service for other users who have just as much right to use the CB as anyone else, yet they cannot because there is a "Channel Mas- ter" who won't let them.

The FCC is to regulate the
> industry based on the needs and desires of the radio community and to allow
> all users to enjoy their hobby.

What you need to consider is that ALL radio is not hobby. FCC ALREADY administers the RF spectrum according to the NEEDS of ALL users as best it can under the Comm. Act of 1934. I can see it coming: AAACK! That law is old and outdated. Nope. It is not. The characteristics of radio have not changed and, therefore, the BASIC precepts of the law are valid and flexible to meet the needs of ALL radio users. Not just CB.

If there is massive disregard for a certain
> law then the law is probably at fault.

Not necessarily. If the regulations were relaxed in order to favor one paticular group of users, there is going to be negative effects on others. The airwaves are full--there IS no more spectrum to magically "give" away. The "massive" disregard you describe isn't as big as you believe, but such disregard is based on ignorance of those who do not understand RF propagation, the concept of sharing, procedures that promote sharing, needs for business spectrum, needs for military spectrum, and on it goes. It STILL goes back to training, and to loose a group of "appliance operators" complete with splattering amps on ever more and more spectrum is a disasterous, horrifying prospect.

The FCC absolutely MUST give some> bandwith to the compitition amp community and surly have regulations
> concerning this activity but make absolutly no mistake. If American citizens
> enjoy and are passionate about a hobby like "keydown compititions" THAT
> activity is as legitimate as ANY HAM activity and MUST be respected by the
> US government and accomidated if at ALL possible or the government agency is
> the OUTLAW, not the hobbiest.

STILL goes back to understanding the affects of radio signals on others' useage, the validity of the activity, and its positive influence on the life of the radio community as a whole. For example, due to the fact that these "keydowns" are "on air" do these competitors know or care who they might be harming. Is a "keydown" more important than the lines they may be putting across the local police computer systems? Tell me how a "keydown" is equal to the health and welfare traffic that is being passed in and out of Washington State on 14.265 in the aftermath of a magnitude 7 (approx) earthquake. ANY ham activity? I doubt it. Here are *some* of the things that reasonable authorities AND the public --at least the intelligent ones--will use as criteria in determining the "validity" of a given activity:

1. Is this activity harmful in any way to others who wish to make use of said facilities (i.e. radio spectrum)? "Keydowns" fail at this because of their potential to disrupt communications of, not only domestic CBers, but of INTERNATIONAL communications that we as a nation have agreed to enhance, not disrupt.

2. Does this activity meet existing or future criteria for the needs of the public at large?

3. How much value does this activity add to the (a) quality of life for
the whole (local, state, national, international) community?

4. Will it interfere with anyone or does it have the potential to do so?
The answer is YES, it does and has the potential to do so.

But I see they LOVE and ENJOY thier
> hobby more then many Hams do

How do you *KNOW* this? You are not, I presume, a ham, so how can you
make a pronouncement such as this without personal knowledge of *how
much* hams enjoy their hobby?

and the Hams are just trying to get them busted
instead of asking
Can this new activity be promoted and enchoraged in a way
> that respects others rights.
\Down to the nitty gritty, MOST hams don't care WHAT CBers do within
the legal 40 channels. What HAS brought MUCH attention to the illegal
activities is the encroachment onto the 10 meter ham band, and it is
hard to delineate one illegal activity from another once the illegals
begin to flaunt their activities.

Again, the competition amp scene cannot be made to not interfere with
others' rights, or have the potential to do so.

Say all CB liniers must be FCC approved

Again, one of the provisions the US agreed to was to make the CB band
a low powered service so as not to create interference to member nations
There is more to it than just the FCC.

and can

Posts like this one still "leak" the real agenda of the "militant" CBer.
That is, to talk anywhere, with anything, on any frequency, at any
power, without restrictions, without respect, without training, with-
out understanding the serious consequences of their actions that *can*
result. Just because you can't HEAR somebody doesn't mean they are not
there desparately trying to overcome the interference caused by one
who thinks his "hobby" is more important than ANYTHING or ANYONE else
in the entire world.

Ken, again, while I don't agree with you, thanks for civil debate.

Jerry

Okay big whatever you say. Some people get it and some people do not.
TO each his own. I just do not understand why somoene would want to
listen to the trash that exists on the freebanders.
As far as the "guy just listening"..my experience has told me that if
someone can listen to that frequency ...chances are VERY good that the
same individual transmitts on that frequency.
As far as your ignorance to what is available on the ham bands goes,
why don't you try it or are you one of those who does not have the
intelligance required to study for the test...learn some code, etc.

I used to fart around on the freeband frequencies years ago...I got
tired of the crap heads on there and blatent disregard for any
"gentlemens rules." So what did I do....I studied the test, studied
the code...got licensed....kept on upgrading to Extra and then decided
I would not mind volunteering my time and became an Licensed Volunteer
Examiner as Acredited by the ARRL.

..yeah so give me a dog biscuit.
Take care,
Sam Cederas

I think that the FCC just might kill the band if interference problems
continue. Enforcement would be like shooting fish in a barrel.

>2) I doubt if the Hams would want the band - and have to put up with the

If the band were to be commercialized, it probably wouldn't happen for
several years - allowing time to clean up after the party. But I'm
sure that there are some businesses that can use it and would be
willing to pay for the bandwidth. There are many other possible uses
for the band, I only named two.

The trend in commercial usage is toward more 'trunked' kinds of usage,
following the lead of the 800 MHz systems that have been around a few
years. The logic is that say 12 frequencies handled together as one
system have far more capacity than 12 individual repeaters. The Poisson
Tables strike again (queuing theory).

One interesting application is keeping track of trucks. The truck
receives on HF or via SCA drops rented from FM stations along major
routes. It transmits GPS data in a packet on HF via transmitters of less
than one watt and automatic antenna tuners to a 4 ft whip. The conditions
of its HF license is that the freq be clear when it fires up so it listens
first, does the packet thing, and it is received at four stations in the
US. The system is going full NAFTA soon. Aside from being one of the
neater Rube Goldberg devices known to man, it is essentially a

self-directed trunking system or junior-grade Spread Spectrum system depending on how one looks at it.

The point of it all is that the days of a single freq assigned to a single user are over at least for data transmission. Commercialization has a different meaning today than it had only a few years ago. In this context, the low VHF frequencies are, to quote my dad, about as useless as a third tit and not nearly as decorative.

You make hams out to be this all powerful entity that is going to save
the day. Well I got news for you. Hams are doing the same thing
they have always been doing. Maybe you are reading the news for the
first time. Hams are self policing and have been for years. They
turn in their evidence and the FCC takes it from their.

Get ready.....get ready for what???? Your scare tactics are a
pathetic attempt to harass people on here by posing as some "In the
Know" individual. Your news is nothing new. The FCC is heading
towards deregulation of a lot of bands. They gave up years ago. Sure
they make a big bust occasionaly to flex their muscles...but the truth
is that they do not have the money anymore.

X-force is TRASH. I've seen a handfull at my local shop getting fixed. They are EL- CHEAPO to the max. Coponents hot glued together and to board, and to bottom of case. NO VOLTAGE REGULATION; it was running 21 volts to the pills. The tech at the shop called the amp builder. The builder outright said "voltage regulation makes them blow up". I am not kidding one bit.

. . . hmmm . . . depends on where it's located . . .

I was thinking more along the lines of other services. It could be used for anything from experimental to remote-control. And in the commercial area, mobile audio might be allowed by license for anyone with a CDL. There are a wide range of possibilities. In any case, I certainly think that the band could be put to much better use than to be abused by a community of pill-popping deltas.

The 20 meter thing is not too surprising. An 11 meter 5/8 is an electrical 27 feet with about 4 1/2 of that loading coil. This would make it about 24 feet at 14 MHz and with the 9 foot radials you have resonance with an off-center feed that is not too drastic. Not anything I would recommend to my friends but WTH.

At 21 MHz it is 26 feet or 35 with the radials which does not seem to present anything near a resonant load. If this turk matches at all decently, it would seem to me that it would have to be as an end-fed halfwave with one of the more interesting matching approaches in history. Not to say you are wrong but the mechanics of this caper evade me.

And you probably won't get the answer you were looking for. There shouldn't be any argument about what is LEGAL and what is ILLEGAL. There should be ACTION. If you find someone who is "actually" operating illegally, then report them. If the person is talking about modifications of Radios and Amplifiers, let them talk about it. I have yet to see you type the legal limit (because there is no such thing) let alone someone on this NG running 20KW as they type their post. Its a matter of discussion and opinions about the topic... there is nothing illegal about talking about mods on equipment the last time I checked...

Could be used for any number of things but for most of them there is a
better freq.

One of the three keys to making sense of 11 meters is to recognize the
pervasiveness and importance of the trucking industry and to a far lesser
extent four wheel travel. It should be FM on some weird channel spacing
so that no channel comes up on the fives, a marine-like power switch, a
marine-like calling/emergency channel with automatic return, and a
non-standard CTCSS tone hardwired. Then weld the case shut with a dye
bomb inside. After a shake-down to get rid of power mikes, roger beeps,
etc. the troops would learn to love it.

The other two are the outlawing of AM coverage outside the present legal
40 in the 26-29 range and a serious revision of Part 95 which has never
made a dime's worth of sense since 1959. Essentially abandon the legal 40
to become a bigger cesspool and defend the rest. Any successful defense
has to recognize the reality of the trucking biz.

Given that UPS never used the 220-222 allocation they got, perhaps that could be refarmed.

Dick N&#65533;BK

I think you totally missed the point of my post. Regardless,...

Admission of a crime is not a crime in itself, and I never said it
was. And I have never accused anyone of operating illegally, even
though there are some posters in this ng that freely admit doing so.
If they wish to use this newgroup to defend illegal behavior, that's
fine. Just as long as they understand that if their defense is lame,
someone else will probably say so in a reply. There is nothing illegal
about contradicting someone's argument, "the last time I checked..."

that's astounding, Bill. Most folks have had the experience of being on CB and having a "I cut the limiter" radio several channels away destroy any hope of having a decent conversation.

Almost every ham who operates on 10 meter SSB has had an unlicensed individual "break" for a signal report.

And EVERY HAM ON 10 METER CW can tell you what the illegal radios are doing to the DX window, along with interference centered 10 KHz apart, starting with 28.005.

Man why in the hell do you worry about that frequency? As I recall that frequency is licensed to the Government and the free banders are not supposed to be there.
Why dont you study and get a Ham License and then you can get on some decent bands and will always be able to find nice people to talk to.
-Sam

Why do YOU care what the freebanders do? Why don't YOU study and get your license and worry a bit less about other people. But I will gladly answer your last sentence. I do no want my addy and callsign on some an info base where you can get all my info at the touch of a mouse. I do not need to spend near what the hammies do to talk around the world. I don't interfere with hammies, and I assure you my barefoot radio is NOT putting out any harmonics that are splattering or bothering another band. I find nice people to talk with EVERYDAY, and guess what? I have plenty of decent bands.

100% agreement. But I also remember when CB first exploded in the mid
1970's. It didn't take long for the ratio of illegals/FCC personnel to
go beyong the level of effective enforcement. Not long after, the FCC
dropped the licensing requirement (Heck, no one was bothering to get a

license, even when they dropped the fee), and then basically gave up on policing the band, except for direct complaints of a sufficient quantity, or backed by a "credible" source (like a LE agency).

The only thing limiting the people from spreading out to "outband" frequencies, was the limited capability of the radios, and the prohibitive expense of doing major design changes, not to mention the lack of people truly qualified to perform such changes.

With the proliferation of general coverage HF ham radios, and export radios, that problem has largely been solved, and anyone with a few bucks can buy their way into freeband history.

But the problem is still the ratio of Illegals/Enforcement. "Deputizing" local cops as pseudo FCC enforcers, adds more manpower to the effort, but they are not really qualified to handle all the cases of "RF tomfoolery". Many mistakes in judgement will be made, many licensed operators will also be hassled in the process.

Until the perception of risk of capture increases, there is just not enough of a deterrant to those that operate illegally on 10 meters, to make much of a difference.

Of course, once the sunspots quit in a few years, there will be enough quiet channels below 28.000 that many will drop back down again, and the problem may solve itself, or at least go into remission.

"Okay big whatever you say. Some people get it and some people do not."

Get what? YOUR point of view only?

" TO each his own."

If you meant that, you would care less about what others do.

"I just do not understand why somoene would want to listen to the trash
that exists on the freebanders".

One mans trash is another mans treasure. I feel the same way about many
of the hammie freqs.

" As far as the "guy just listening"..my experience"

What does that consist of?

" has told me that if someone can listen to that frequency ...chances
are VERY good that the same individual transmitts on that frequency."

Sorry 'bout your luck and stereotypical ways.

"As far as your ignorance..."

No. As far as YOUR ignorance. As to what takes place on the freeband,
you threw the first stone against it and it wasn't pretty. Practice what
you preach.

"to what is available on the ham bands goes, why don't you try it"

Been there, done that.

" or are you one of those who does not have the intelligance required to
study for the test"

You don't have a clue. You know how many of us actually do know code? We
don't CARE about getting a ticket. Why does that bother you?

"...learn some code, etc.
I used to fart around on the freeband frequencies years ago...I got
tired"

Read: Couldn't get out!

"of the crap heads"

Why? Cause they wouldn't talk to you? If you went on the air with the same attitude you carry here, it is no wonder.

" on there and blatent disregard for any "gentlemens rules."

You mean the way YOU think it should be. The frequencies I go to, there are plenty of "gentlemans rules"

"So what did I do....I studied the test,"

Good for you. Many of us passed the sample tests COLD when they were posted here awhile back. NO STUDYING! So what?

"studied the code...got licensed....kept on upgrading to Extra and then decided I would not mind volunteering my time and became an Licensed Volunteer Examiner as Acredited by the ARRL."

That says it all. Now I know why you have this "holier than thou stance".

".yeah so give me a dog biscuit."

You earned it.

"Take care,
Sam Cederas"

You too!

Besides,
"Guys, if you plan a strategy against me (us?),"

I said it before and I'll say it again. you guys give yourselves way too much credit. If you are in the room, read what I wrote. I worry about you as much as a pimple on my dogs ass.

"don't do it out in the open"

Arrogance must be an inbred trait to some of you guys. Here you are giving directions and trying to tell people what to do. LMFAO!

" I had a big smile on my face again today when I went thru the "suggestions" on how to kick my ass'

Nobody used that term, not even close. More of you girls pinching each others fannies. A rat, yes.

" in rec-radio-cb. All the methods so far can be avoided, even the one which includes a snail mail letter with confirmation and so on: I have plenty of good friends"

I doubt that as well. But what do you care what I think? Oh yea, you care, else you would not follow us. Thats why we are constantly fanning our asses to get you guys noses out of it. Tell me you don't follow us a like loyal puppies! Now I'm smiling!

"in the States and Canada, real people'

Are there any other kind?

" with real addresses and all the credentials"

What credentials are needed to supply you with an address. Man, you think you are important. (chuckle)

'needed to do the job'

What Job?

"
Give my idea some thought"

You are in the wrong forum to actually think we would.

," and tell me where you draw the line in your "freebanding",

what do you mean, "draw the line?"

"and I'll let...."

Now I'm rolling! You will never "let" or "permit" me to do anything, son.

"you do your stuff"

I always do.

"- unless you do anything really outrageous, of course.
If you have faith in your activities, surely you can defend yourselves against me"

Nothing to defend. Just chewing your trash up and throwing it away, It has no merit. You live in a dream world and think you matter. Haha! You don't. To any of us.

," I'm only a harmless troll"

We know.

" (I've read my descriptions in the ngs - on the other hand, somebody called me a full-blooded "rat". Isn't that a mob term?? Are you also involved in organized crime:-) ...) Hope not."

Agian, why the hell would you hope anything that doesn't have anything to do with you?

Gary,

oh8mfh,

out

What about the people that respect the law, and expect it to be applied
equally to everyone?

If the FED sends the message, that it's ok to ignore federal
regulations, how long will it take before people start ignoring other
laws that might have a greater impact on society?

> If even half of all the CB radio operators ever got organized, they would be a
> voting bloc that would have an extremely strong 'voice' in Washington.

Most blatent illegals fall into the "Joe Sixpack" segment of society.
Most couldn't organize a successful weenie roast much less become a
political lobby.

> Possibly strong enough to cause a re-allocation of the 10 meter band 'for the
> good of the many'.
>
> If they gave the truckers 10 meters I'm sure they would get the trucker's
> votes, and that would unload a lot of the existing problems off the regular
> channels.

Most truckers belong to unions (like the teamsters). Most of them
already voted for Gore, and Bush still won.

Besides, most truckers are more conserned with issues of financial
importance, then who rules the CB band, and would vote with their
wallets first.

>
> One reason folks buy amplifiers in this area is because that is the only way
> they can reliably communicate past the truckers driving through town 50 feet
> apart and using their CB radios in such a way that they are oblivious to the
> other folks trying to use the frequency.

And those same inconsiderate truckers are now invading 10 meters. How
long do you put up with parasites, before you do something about it?

>
> If you live in a town that happens to be a trucking 'HUB' like Chicago, that is
> a continuous 7 X 24 interference problem.

10-4! And this illustrates the importance of trying to do something
about it. Legitimizing this same inconsiderate behavior is not sending a
good message.

> I know this post will alienate a lot of ham operators, but I am just trying to
> show you what the 'downside' of all your efforts to get FCC attention could
> possibly be.

It would be a sad day for our society when we let the whims of a bunch
of inconsiderate, lawbreakers set the standards that our society must
follow and abide by.

Anarchy has never, and will never work.

I'm surprized that you fail to see that.

DO WHAT I DID AND GET THE LOCAL POLICE INVOLVED AND FILE A {DISTURBANCE OF THE PEACE} COMPLAINT. I DID AND THE PERSON WAS FINED $200.00 AND GIVEN A 30 DAY SUSPENDED SENTENCE. SINCE THEN HE HAS DONE IT 3 TIMES AND WE CALLED THE PROSECUTOR AND HE FILED THE CHARGES AGAIN FOR US. WE WENT TO COURT AGAIN AND HE WAS FINED $100.00 AND MADE TO SELL HIS EQUIPMENT. HOW'S THAT FOR ACTION. MORAL OF THE STORY IS THAT YOU DO NOT HAVE TO PUT UP WITH THIS KIND OF INVASION OF YOUR PRIVACY AND DISTURBANCE. YOU CAN PROBABLY TRY ALL OF THESE THINGS THAT THE OTHER GUYS ON HERE ARE SUGGESTING, BUT MY GUESS IS THAT THEY WILL NOT HELP AT ALL. IN OUR CASE THE PERSON WAS BLEEDING INTO COMPUTER SPEAKERS AND THE PHONE LINES.

You, my friend, are so full of it your eyes should be brown. I call your bluff. If what you say happened really did, tell us the town and police agency involved so I can confirm it. You won't 'cause it didn't happen. Now begone with your lies.

>Just 'Cause you say it don't make it irrelevant.

It's irrelevant to me and to the topic of this thread too.

> NO! That is the essence of YOUR problem. You are quite arrogant to think
> you know what is best for the band and what everyone wants.

I have my opinions, I express them, and if that ticks you off, deal with it.

> Oh man! Read just what you wrote. Because there is a LACK of something
> YOU deem necessary, it is reoccuring? Let me say it again, lack of, but
> reoccurring? Oh man!

Then why don't you start by pointing out how you have personally spoken out about the need to clean up 11m, and the elimination of pirate operators. You spend your time running to the defense of people like Tim, who has no excuse for what he does. And Tim is part of the problem, being a self admitted radio pirate. I would not even call him a CBer.

> only arrogant ones such as yourself

I call a pirate radio operator a pirate radio operator. No different than calling a drug deal a drug dealer.

> Doesn't matter why.

Truth hurts. Your a big boy, and I don't need to treat you like some kid whose feeling are going to be hurt.

> Good. Stay the hell out of mine.

Now now Twisted, get a grip on yourself.

> You are an ignorant fool to make such a statement

Based on your present use of colorful language, your stead fast refusal to admit 11m is a mess, provides the very example to invalidate your own statement.

> Like the Liberty net?

The topic of this tread is "Re: Problem with export radios". If you wish to comment about the Liberty Net, then feel free to start another separate thread on the subject. Mean while I will continue to comment about the problems with export radios in this thread.

> No, it isn't. If it was, you'd stick to the issue, and I would take no
> issue with it.

You would take issue with anything which reflected negatively on 11m just to be argumentative. The present thread topic included. Now that you came out and stated publicly that "you'd stick to the issue, and I would take no issue with it", it's going to be interesting to see if you live up to your word, or if it's all smoke.

Twisted is trying to get creative in his quoting style. In case you haven't noticed he is not quoting anything while leaving my name at the end of his post. That way it looks like I either wrote the whole thing, or he just wants to make it harder for people to figure out who wrote what. I suspect he's up to no good, and will sooner or later try quoting his own post, and claim I wrote it. It would appear that way if one did not closely follow what was going on. For an example just look at the post just above yours. Basically he's just wasting his time with the effort.

The hams used to have 11 meters and it was hardly used because they have 10 meters. No one cried when they lost it and I doubt the hams would want 11 meters back.

Re: Problem with export radios

I have a feeling you may be getting dangerously close to my kill file.
I cannot merit a discussion with one who doesn't even have the sense to
know who he is posting to.

Group: rec.radio.cb Date: Thu, Mar 1, 2001, 10:00am From:
no-spam@junk-mail.net (Leland C. Scott)
Just 'Cause you say it don't make it irrelevant.

"It's irrelevant to me and to the topic of this thread too."

So was half of what you posted.

NO! That is the essence of YOUR problem.
You are quite arrogant to think you know what is best for the band and
what everyone wants.

"I have my opinions, I express them, and if that ticks you off, deal
with it."

Doesn't tick me off. I express mine to invalidate yours. You can't even
tell who posts what. Maybe you ought to go with a server you can
comprehend.

Oh man! Read just what you wrote. Because there is a LACK of something
YOU deem necessary, it is reoccuring? Let me say it again, lack of, but
reoccurring? Oh man!

"Then why don't you start by pointing out how you have personally spoken
out about the need to clean up 11m"

Again...wasn't me.

, "and the elimination of pirate operators.'

Another correction from the cbers to the hammie. Wasn't me, genius.

"You spend your time running to the defense of people like Tim, who has
no excuse for what he does"

I do what I feel is necessary. Don'thave to justify myself to you.

"And Tim is part of the problem, being a self admitted radio pirate. I
would not even call him a CBer"

Opinions are like , well you know.

only arrogant ones such as yourself

"I call a pirate radio operator a pirate radio operator. No different than calling a drug deal a drug dealer"

And I call a busybody a busy body and one that is ignorant in tthe knowledge of who the hell he is even talking to. .
Doesn't matter why.

"Truth hurts."

Maybe to you. Truth never hurt me. Is that why you're in here stirring the pot?

"Your a big boy, and I don't need to treat you like some kid whose feeling are going to be hurt"

Perish the thought. Now stay on topic.

Good. Stay the hell out of mine.

"Now now Twisted, get a grip on yourself"

Get a grip on YOURSELF, dude. You sound like you are getting frustrated.

You are an ignorant fool to make such a statement

"Based on your present use of colorful language"

Again...show me where, and check the headers, Einstein.

", your stead fast refusal to admit 11m is a mess"

Make up your mind. At the beginning you said I was for it. See what I mean?

," provides the very example to invalidate your own statement"

What statement? You are lost!

Like the Liberty net?

"The topic of this tread is "Re: Problem with export radios If you wish to comment about the Liberty Net, then feel"

Sorry Pal, I need no one to tell me to "feel free' to do anything. I do as I please. If you can tie in all your BS to this thread, then I can damn sure use the Liberty net as an analogy to what YOU incorrectly stated.

' free to start another separate thread on the subject. Mean while I will continue to comment about the problems with export radios in this thread."

No, it isn't. If it was, you'd stick to the issue, and I would take no issue with it.

"You would take issue with anything which reflected negatively on 11m just to be argumentative."

No. You are projecting from within. Anything related to freebanding or amps in any way and you and your ilk take issue with it just to be argumentative.

" The present thread topic included. Now that you came out and stated publicly that "you'd stick to the issue, and I would take no issue with it", it's going to be interesting to see if you live up to your word, or if it's all smoke.

Like the smoke you are blowing out YOUR blow
hole? I said if YOU stuck to the issue, I would take no issue with that. I don't expect you to understand. You have already demonstrated your ineptness at even knowing who you are communicating with. Dougie comes in here to give us a hard time, and makes fools out of you and another unnamed source (AHEMQRM) who also doesn't have the balls to admit when they are wrong and apologize like a man. Keep it up Dougie! Hahaha!

Everything is in quotations from the original poster. Too bad you can't
figure it out and can't tell a forger from the original. Go sit in the
corner with the other half a man, QRM! A real man can admit an error and
apologize when he's screwed up as bad as you two have! QRM thinks I'm
gonna let it die without a stink, he's wrong. Same with you. You both
F'd up and neither can admit it. That's no news to me though. I had a
feeling you both were punks. Speaks volumes about the type persons you
are, especially when YOU were the one crying about an apology from ME,
Leland, when I mistakenly attributed a post to you. And you got it! I am
not afraid to admit when I'm wrong. You guys are choking on it! You
hypocritical losers! Talk about credibility. Until you can see how bad
you erred, your credibility is absent. So go on about your childlike
ways.. I'm done teaching you how to read headers. You need some
assistance and I am not going to be the one to edu-ma-cate you. Dougie
is doing just fine. you both are wrong and fell for Dougies line ALL THE
WAY! Suckers!

> CBERS correcting you?

That is still no guarantee that you did not write both, even if the headers are significantly different. You could be using more than one ISP, somebody else's account, and or posting from an alternate location. I currently have access to up to 3 ISP's myself, at two different locations, with their own home news servers too. The particular ISP I use depends on where, and which computer I happen to be using at the time. Since I have recently switched from a dial up line to a cable modem at home with another ISP, that means over that past 5 years I have used as many as 4 accounts.

So if somebody has been forging your screen name etc., you don't seem to care much unless the contents of the "forged post" conflicts with the information in another post. The monkey's on your back to prove who you are. Waving your hands around and claiming forged posts don't cut it. It's too easy to forge your own posts, and claim it was somebody else.

"You yellow coward! Go ahead and backpedal. What the hell would I forge
my own name for? I have NOTHING to hide. I even posted my addy here for
the whole damn world, See, Leland, unlike you, I have a full set".

, somebody else's account, and or posting from an alternate location.

"Uh-yea, right Check my posting history and times if it means that much
to you. But it doesn't mean squat to you. I could have claimed the same
thing when I erred with your post long ago, but I admitted I was wrong,
Like a man! Something you and QRM have a problem with. You guys are
wrong and you both know it and are both too small too admit it." Well at
least QRM is. In addition to being small, you are too stupid as well,
since you don't know how to trace an isp."

I currently have access to up to 3 ISP's myself, at two different
locations, with their own home news servers too.

"Good for you. I have one. Web tv. Go play with yourself halfman!"

The particular ISP I use depends on where, and which computer I happen
to be using at the time. Since I have recently switched from a dial up
line to a cable modem at home with another ISP, that means over that
past 5 years I have used as many as 4 accounts.
So if somebody has been forging your screen name etc., you don't seem to
care much unless the contents of the "forged post" conflicts with the
information in another post

"Why should I care? Everyone who has half a brain is aware of who it is.
Excluding, of course, you and QRM."

The monkey's on your back to prove who you are. Waving your hands around and claiming forged posts don't cut it. It's too easy to forge your own posts, and claim it was somebody else

"Ha"! Nice try. You know the truth and so does everyone else. Busted, made a fool of by Dougie, a self-made fool, and one that demonstrates sheer ignorance in the way of usenet posts and utterly lacking any cajones whatsoever. You're a punk, Leland, and cannot afford me the same courtesy I afforded you in the past. Ditto for QRM! You know it, QRM knows it, I know it, and so does everyone else".

No, I think I got it. Earlier in '99, a group of CBer's petitioned the FCC to expand CB operating spectrum to the so called "unused" Gov't frequencies above and below CBRS, extend the legal distance range and power requirements above 4 watts. And that was the legal part, right?

> Admission of a crime is not a crime in itself, and I never said it
> was. And I have never accused anyone of operating illegally, even
> though there are some posters in this ng that freely admit doing so.

>

> Sparky, FLRC

Freely admit? For all you know, they could be really good liars about their equipment just to raise ruckus with the individuals who really can't stand breaking ANY laws or regulations. And you're right... "There is nothing illegal about contradicting someone's argument, 'the last time I checked...'"

Pass up most of the posts on your question and read the post from Richard McCollum. His answer is correct. A friend of mine had a similar problem into computer speakers a couple of houses down and a ferrite bead on each speaker lead fixed the problem. I don't care how dirty the rf signal is or isn't - telephone and speaker interference are caused by poor shielding in the telephone/audio system. It is not the fault of the transmitter. A couple of turns of the speaker leads through a torroid or putting clip-on type ferrites over the speaker leads should cure your problem. To the other guys in the newsgroup - the CBers and Hammies can whine all you want, but this gentleman asked an honest question. Could you lighten up on your antics just enough so we can get him an honest answer before you commence jumping on each other again? Oh - thanks, Dick, for an honest answer (if this fellow can find it through all the whining!).

Thanks and 73 from Rochester, NY

> Know what i mean Vern...........

Hiya there, Mad dog,

So all the ham exams are in vain, since any intelligent human being could use his or her judgement on how to operate a radio, no need for any test.. .
Au contraire, mon ami. Ten meters, especially the CW portion, clearly shows everyone what illegal radios do, especially in the hands of imbecils.
Legal CB radios are something quite different, and if someone is willing to study a bit, a ham ticket is a choice, but not a must. Then you could use a linear, various ham bands and so on, without any scruples.

Sigh. No one seems to 'get it'. Why should hams be upset with intruders on the 10 meter band? Well, what if I build a neat little 100 watt transmitter. Better make it FM. Ummm ... make that wide-band FM. Where would I like to operate? Lessee ... um, channel 8 locally will be televising a neat show at 4:00 PM tomorrow night - yeah, I'd like to operate on the channel 8 audio carrier frequency - and around 4:05 PM tomorrow night I can start hollering "AAAUUUUDDDDIIIIIIIIOOOOOOOOOOOOOOO" to my hearts content. 100 watts should pretty well blanket the neighborhood, considering that the channel 8 tower is miles and miles away .... I'd bet the whole neighborhood won't be too happy with my choice, but, what the heck. Everyone can transmit anywhere they like, right? Come to think of it, I can buy a 10 watt UHF TV transmitter and convert that to VHF channel 8 video carrier and put it through a couple hundred watt amp and put "NUMBER ONE" up on the screen in the neighborhood too! Maybe I can find another neighbor within a mile or so and we can chat to each other over the channel 8 audio carrier ....

*** putting on my asbestos pants and shirt at this time (and a crash helmet) ****

Wer have 1.8 to 2.0 with certain limitations, e.g output power ranging from 15w to 1kW. Also, only 7.0 to 7.1 megs, with extreme interference from various BC stations, e.g. Arabic countries, running several Megawatts... aw, that hurt.

David, I can only assume you are talking about THE BASE VERSION, it RUNS 21 VOLTS TO THE PILLS WHEN IT IS IDLE, WHEN YOU KEY UP THE VOLTAGE WILL DROP PROBABLY TO 16 VOLTS OR SO, the pills aren't seeing 21 volts. That IS CALLED AN UNREGULATED POWER SUPPLY Now I don't agree with the builder of X Force regarding regulating, but because he is not a technician by any stretch of the means I know he doesn't understand the correct operation of the amps he is building. he is just a parts assembler. But It is cheaper to build an amp with a UN regulated power supply

Have you ever been on a fox-hunt and had to find a hidden transmitter,
3 words- "radio directional finder"
Arrange a mobile possie one night when he is transmitting, you will need a
road map of the area,
and a couple of field strength indicators with adjustable input
sensitivity,using the rf gain on a
so-equipped cb would also work quite nicely.
If you know someone with a RCI2950 use them in the hunt, (front-end overload
can be a
powerful tool when trying to locate someone whos transmitting).
In case your not familiar with the 2950's receiver, it is very powerful and
easily overwhelmed.
Assign a couple friends to non-chalantly entice him while the possie
triangulates his position.
Once you find him you should beat the #$&*%$#@ out of ....know
what i mean Vern.

I resemble that remark, being a trucker and having a great radio (2950) has enabled me to get
help when i am broke down (I hate it when that happens) also helping other stranded motorists
and truckers in need of assistance.
There is bad apples in every walk of life, but for the most part the majority of us will give the shirt off our back's to help someone on the road.

Keep On Truckin.....and stay out of our blind spots.

A simple loop antenna works nicely, and one person can do the job in
about 10 minutes. Bring your staple gun for bases. For mobiles, make a
bolo out of guitar wire and a couple fishing sinkers.

> site. Thanks

No, they are not. Use Bill's 2 Way. The Joker of an outfit that ExportsRUs points to now will sell you junk and not make good on it without a whole bunch of drama. Believe me, it's not worth it. I have a story to tell about the miscreants at EEI and their handling of a friend of mine that took place over the past several weeks. It's a sad display of poor service and inability to accept responsibility on EEI's part. I'm gathering the last of the information this evening and I will present it for all to see, either later tonight or tomorrow morning. It is eye opening and it shows a clear pattern when coupled with the other stories of poor service that have appeared on the NG lately.
I say again, "Use Bill's 2 Way." You will be glad you did.

Uniden Pro-510XL - excellent mod and can be found new for about 30 and used
for around 15.
Get a microphone like the D104-M6B and this radio will sound really nice.

Hey dummy...I just got back on the NG here after 3 days of relaxing in Las vegas with my wife. I see you are still running around blaming it all on me.
Hey thats cool, that way whoever IS doing it is getting away and laughing at you...like I am now. I guess you got kinda pissed off about whatever it was they forged. good.

Dont sweat it gayboy, I will have anice web page up all about you soon. hee hee hee.

best fishes,

N8WWM

Damn it Dougie. OK let's level man to man: what did I do to deserve this? Every morning I get up and have a cup of coffee while I listen to the skip roll in on 27.555 and I read the newsgroup and see some stupid post you did that attempts to forge me. It wrecks my day and I must admit I am getting tired of the constant harassment. Last night I stayed awake thinking about my secret weapons, the killfile and the < > and how they PROVE beyond a shadow of a doubt that Leland is an old goat. Then I went for a walk around the trailer park and damn it if I didn't step in dogshit. It's YOUR FAULT Dougie! Well I won't play your game anymore. I will NOT let you upset me. I'm going to go make farting noises on 28.355 USB now and you or Leland can't do A THING about it! HAHAHAHAHAH!

If you are an open-minded freedom-loving individual like me you probably are sick of all the holier than thou hammie and rf cop interference in this NG. This is our HOBBY and we have to FIGHT for it because JEALOUS HAMS want to take it away from us. How do I know hams are jealous? Read this NG! They are against us and make no bones about it. They are out to get us, just like Area 51 and project MAJESTIC, I tell you, they are no joke and are part of an effort to take away your freedom. I am addressing this to the honest businessmen who use CB not only as a hobby but also to put FOOD on their families tables. Many of you run a little side business like I do tweaking and doing mods hehe and you DO NOT want any government poking their nose into it especially taxes-wise. Who is the ARRL to say what is legal and what is not? Do they NOT read the Constitution? Why should someone get an NAL for 10 grand just for what is essentially the same as jaywalking? We are FREE to do what we want on radio - that is what the Founding Fathers intended - and if that includes running power or making a few bucks with 800 channel export radios so be it - that is part of AN HONEST HOBBY that the FCC REFUSES to recognize. Don't laugh it's true that if enough of us stood up and contributed say $5 each to kitty we might be able to get a lobbyist interested. Hell, maybe XFORCE or DAVE or even the Aryan Nationalists at EEI would be interested in paying for lobbying for us. Hey money talks and companies like RCI have a VESTED INTEREST in keeping freebanding alive. Even though fartheads like Leland disagree, freebanders are a real benefit to the US. We experiment with new frequencies all the time. And the mobiles and big boxes of the bowl are really pushing the state of the art. So what, sure it's BS, but that's not the point. The point is to STAY doing what we're doing by hook or crook and not be bothered by "legalities" we need MUSCLE. There are pleanty of bad dudes in this NG I'm sure they could do some damage to whoever is causing us harm. If we could get some crooked politician on our side THEN we could take over 10 and 12 meters and have a DX band that hammies would REALLY envy.

The TRC 236 requires a simple clipping mod to transmit in the mostly unused state cop band above 30 MHz. Cut D11 and R3. R27 is the RF adjustment. Turn that all the way to the right. Echo and power mike also help a lot.

Dougie I see you are still concentrating on homo issues. Why the fascination with gays? Studies show MOST normal men HAVE had one or two same sex experiences and I am willing to bet most people in this NG have done so with a Scoutmaster or older brother or in my case a college roomate, that is no reason to call people "gay". You are a sick individual to bring unwanted ridicule to people in this NG and I hope you have the guts to apologize to the ones you have hurt even though I doubt you will.

Why, of course I am jealous: I wonder what it would feel like if I had an
import radio and amps...

Well, we've got to live with what we've got: 137kHz to gigabands, ALL
LEGALLY.

Have a nice day,
don't twist your head

I had a similar situation happen to a friend of mine as well. He was taken to court (and lost) on a charge of "disturbing the peace", which resulted due to interference of a neighbor's stereo. It might have been defendable, except for the fact that the neighbor had tapes of the interference, and the fact that the defendant was using obscene language, was enough to convict him.

Had the interference not been of an offensive nature, the case for disturbing the peace could not have been made. In the court's eyes, this case was no different than someone yelling obscentities at the top of his lungs in the middle of the street at 2:00 am.

Wow! Straight from the X-Files. Another conspiracy theory. Thank God there are alert CB Operators to keep us from being rushed to the slaughter.....and now some specifics:

>This is our HOBBY and we have to FIGHT for it because JEALOUS HAMS want to
>take it away from us.

Conspiracy theory fails because:
(1) Hams ALREADY have 11 Meters, just like everyone has 11 Meters. Wake up! All you have to do is buy a radio for $39 and you have 11 Meters.

(2) Hams don't want 11 Meters as a ham band. Hams did not use it when they had it years ago, and they sure don't want it back, now. This issue has been settled numerous times in this NG. Quit listening to the Old Farts at the CB shop. This arguement does not fly anymore.

>They
>are against us and make no bones about it. They are out to get us, just like
>Area 51 and project MAJESTIC, I tell you, they are no joke and are part of
>an effort to take away your freedom.

Theory fails again:
(1) Nobody is out to get you. If you don't believe me, look over your shoulder and ask that person who's following you......
(2) Nobody is trying to take away your freedom, which (for purposes of this discussion) consists of operating below 28.0 MHz. You don't have the freedom to operate higher than 28.0, so you can't lose what you don't have.

> Many of you run a little side business like I do tweaking and doing mods
>hehe and you DO NOT want any government poking their nose into it especially
>taxes-wise.

Fails again:
(1) Hams don't care if you tweak radios, as long as these radios don't get used in the Amateur allocations by unlicensed persons.
(2) Hams don't care if you pay taxes on your side business.
(3) By the way, we've seen some of your work. Where else but in America would somebody pay good money for a radio, then pay good money for someone to butcher it, and then be thrilled--even though other operators are yelling at him for splattering across ten channels?

>Who is the ARRL to say what is legal and what is not?

An accurate statement. The ARRL does not determine what is legal and what is not. Perhaps you are referring to Congress, and its enforcement arm, the Federal Communications Commission?

>Why should someone get an NAL for 10 grand just
>for what is essentially the same as jaywalking?

Last time I checked, Jaywalking was not a Federal offense.

>We are FREE to do what we
>want on radio - that is what the Founding Fathers intended -

I remember this from my history books. Paul Revere, wasn't it? "Channel 1 if by land and 2 if by sea...."

>freebanders are a real benefit to the US. We experiment
>with new frequencies all the time.

Whoa! Experiments imply something scientific. What do you call it when you decide to take over someone else's radio allocation? Outlaw? Pirate?

Experiment all you wish......BELOW 28.0

>There are pleanty
>of bad dudes in this NG I'm sure they could do some damage to whoever is
>causing us harm.

There are some REALLY BAD DUDES in this NG, Old Man. But not in the sense you're suggesting. Do you think this NG is not read by folks who make and enforce communication laws? DUH! I sincerely hope you're kidding about doing radio mods as a sideline business, because you sure "let the cat out of the bag" if it's true.

>If we could get some crooked politician on our side THEN
>we could take over 10 and 12 meters and have a DX band that hammies would
>REALLY envy.
>

This comment is going to come back and haunt you, someday. 'Nuff said.

Hello Bill: I had a friend who wanted me to order and assembly him the forgin manufactured "New" Starduster.

What a piece of junk!!!!! I can't put into words the engineering effort that had to go into this pile, to make it as cheap as can be.

The aluminum tubing is soft as butter, and I wouldn't use it for a mop handle. Most of the forgin made stuff is of the mop handle quality.

I threw all this crap in the trash, my friend was amazed that I just just throw out a 39 dollar antenna. I told him that you can't get your money back and that it would cost you much more money and time to put it up and then have fall apart, and then buy something else. So I saved him money and time. And I didn't charge him anything. I eat the 40 dollars, but I didn't lose a day off up on his roof replacing the damn thing either.

I had a old A99 that I gave him, and told him when he is ready for a good antenna that I'll put his name on the list. Just last night he sent me e-mail, he's on the waiting list.

Looks very nice, but lacks the features other "Galaxy" radios have..This radio has sideband, but NO extra channels. It also does not have echo. To be honest, I really dont think it will hang out with the other Galaxy radios on the wattmeter either.. If you are looking for a Galaxy, that has the channels, and most of the features (except sideband,and echo) get the 55V. Unless that is, sideband is a major issue.. in that case, I would find a Uniden Grant XL.This one has sideband, and can be channeled out with very little problem.. The Galaxy 959 cannot be channeled unless you use an expander kit.. These "kits", are very unstable, and tend to drift frequency more often then not... The way a Grant XL is channeled, is through the PLL chip. NO external ""kits" are added.. I own both radios (the Galaxy 55V, and the Grant XL), and am overjoyed with the both of them..
The 959, I feel, is nothing more than a flashy exterior (large S-meter, freqency counter)..... Hope I helped with your decision....
Good luck,
Maniac.

<twistedhed@webtv.net> wrote in message
news:27796-3A9EA913-170@storefull-128.iap.bryant.webtv.net...

"Yes it is. Too bad you don't understand how it works."

Sure I do. Just for grins and giggles somebody forged a post using my name. Now go and try to prove who is really who. They also did the same thing on the Ham policy news group too.

"You yellow coward! Go ahead and backpedal. What the hell would I forge my own name for?"

No idea, but it is possible.

"I have NOTHING to hide."

You could start by using your real name for one. I don't recall ever finding that out.

"I even posted my addy here for the whole damn world"

You may in fact have done so, but I don't recall seeing it.

"Uh-yea, right Check my posting history and times if it means that much to you. But it doesn't mean squat to you."

Your right it doesn't. If you check the time I post, carefully, you will notice I have made posts almost around the clock at times. So any posting pattern I have, based on time, is not very regular, and thus would be useless as a means of assurance that the post is genuine.

"I could have claimed the same thing when I erred with your post long ago, but I admitted I was wrong, Like a man!"

I did appreciate that too. The difficulty at the moment is I now find that somebody is forging posts in my name too. Without an independent method to verify who is really who, people can't even trust anything posted. So I will apologize for the other post, from me, where it seems I quoted a forged post in your name.

"Something you and QRM have a problem with. You guys are
wrong and you both know it and are both too small too admit it."

As you see above I don't have a problem with it.

"Well at least QRM is. In addition to being small, you are too stupid as well,
since you don't know how to trace an isp."

As I pointed out, in a prior post, tracing an ISP is not prove enough. Too many people have more that one ISP they use.

"Good for you. I have one. Web tv. Go play with yourself halfman!"

You would impress me more without the name calling.

"Why should I care? Everyone who has half a brain is aware of who it is. Excluding, of course, you and QRM."

You should. I could very easily use one of my accounts to post messages here under another name, and nobody would be able to prove it came from me or not. The same could be done by anybody else too. And that is the problem.

"Ha"! Nice try. You know the truth and so does everyone else."

What I do know is the contents of the exchange we had in those other posts, which has convinced me, from your current comments, and excluding your obvious anger, that I'm addressing the real Twisted. I don't trust tracing ISP addresses however.

"Busted,made a fool of by Dougie"

And then again it may not even be him, but somebody else who wants him to be the fall guy, while they jerk our chains and get a kick out of us point fingers at all the wrong people, including even Dougie.

My first reaction was it was Dougie. We know you are too small of a man to do the right thing. Then I realized, all your isps, words out of your mouth, obviously, you have forged yourself. Sorry, it's just too convenient and easy for you to claim it was a forgery. The burden of proof is on you to prove otherwise. Have a good day.

If you can find a Cobra 19 Plus with the plastic case......These little
things kick ass! Keep in mind that when buying ANY of these little cheap
radios.....they ARE throw aways and will crap out much sooner than many of
the better radios. The 510 is also a good choice but if possible.......I'd
go with the little Cobra.

When looking at a high end amp, you'll find that outputs are going to be
VERY CLOSE. The determining factor will always come down to the ENTIRE SETUP
and not just amp selection. I would pat MORE ATTENTION to ANTENNA SELECTION
than high end amp. Any way you look at it, you can only get so much out of
2879's.

HAMFEST March 4, 2001 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB and SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - March 4, 2001

LINDENHURST, LI - NY

On March 4, 2001 the Great South Bay Amateur Radio Club will again
sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and access-
ories, software, books, technical manuals, ARRL information, Amateur Radio
License Exams, Door Prizes.

Advanced registration is $18.00 each table. Tables at the door are $25.00
each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations.
NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no
charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst.
For exam candidates please remember to bring your original FCC Amateur
Radio license (if licensed), any C.S.C.E. forms that are pending, plus a
photocopy of each, pens, calculator, formal form of ID (preferably photo
ID), and the examination fee, to the exam session. Current ARRL/VEC fee is
$10.00, exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights
of Columbus Council.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 PM following the Newsline Report on the W2GSB
repeater, 146.685 -600 136.5 PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704-0356

Greetings!

I'll second that, lots of good memories, dinky little radio that was a talker. A 2078 Final, with a KIA7217p audio chip. 5-segment LED "bar-graph" display and push button channel with PA and CH9 switches. Built in ANL, tended to get noisy due to electrical noises in some areas but a little re-tune of the ANL gets rid of the noise.

Yes, they are frail to a point, but if they're taken care of, they do live to see another day. The biggest drawback is the lack of metal. Almost all plastic. Makes it lightweight but prone to overheating when you're long winded. However, you could hit it with a baseball bat and it will still be looking back at you - real thick ABS type of plastic for the case.

They use a condenser element mike, or oft' known as Gray Key Mike. It differentiated it from the regular Dynamic element mikes. The dynamic ones wouldn't work very well on this design, you needed a condenser or power mike with high output to drive the radio. Mike jack is the 5-pin Half-moon DIN connector types, like older R/S models.

When you could "tweak" the mikes power supply and audio feed to the audio chip, along with some other little tweaks, the radio gets compliments from others thinking it's a big radio.

The newer Cobra 19's aren't as well made, so if you can locate a Cobra 19+ with the satin Chrome face and controls, with blackout display, and the pushbutton channel controls, you've got the ones I also recommend.

Darn good radio for a Garage sale special that I have located them for, many as low as $10.00 and one was even free.

It's a shame that they aren't made like they used to.

Baseball bat not included, see Warranty for details...;-)

On Fri, 02 Mar 2001 15:55:11 GMT, while the modem was ice fishing with the Mouse, "Train" <cbmods@optonline.net> dissertated the following:

I think that's the point. So long as people continue to read my posts he
most likely will continue to forge his posts using my name, just so they get
read. If posts forged in my name no longer get read, he will just pick
somebody else, and use their name.

Hmmmm....I think you have dual personalities. I called you a name, A halfman, and an idiot. Correct. I did. It was not out of anger. As you said, you call an illegal an illegal. You said you call 'em as you see 'em. For you to say you believe I would forge a post from myself, well, I too, call 'em as I see 'em.. You have been around here long enough to know the language I use. If I didn't mind the world knowing my name, I would have got my ticket long ago. Well, thats not entirely accrate, there are other reasons, (no, code is NOT one of them) but that is the main reason. There is no difficulty here, Leland. When you read an asinine post attributed to a regular in here, you have got to have your head in a closet to not see who it is. Most of us know the regs in here and there are little things that most of us know to look for in posts that tip the hand of the author, for those who don't have access to the isp numbers. Do not misinterpret my frustration with you as anger. Even though we have disagreed overissues in the past, we have usually managed to maintain a somewhat civil dialect. But when you start misattributing posts to me and use them to justify your calling me illegal, hypocrite, whatever, etc., etc., do not be offended by return fire.
No, Leland. It's none other than Dougie. Trust me on this. Lets assume for a second you CAN forge the #'s. 1) Dougie will never learn how 2) If he did, you would think he would get rid of the "Toledo" by-proxy addy server that always shows when questionable posts are made, eh?

It's a good working, fairly rugged, Type Accepted by the FCC CB Radio. Can be modded like any other with the same board. I had no problems with mine. If you want a good working radio for around 150 plus shipping, you can't go wrong. Remember, it's a CB, not a 10 meter Export "type" like the other Galaxies.

Jeff

Source record: 74680

Ken,

In all honesty, if one must use a coil in an antenna, then use only one. Coils do add resistance to the total system. Ideally, the 102" whip "should" work better. But, alas, there are drawbacks to ANY mobile antenna. The think that "hurts" the whip is that it flops around and leans back in the breeze. This *can* (it doesn't mean it does at all times) change SWR in the system. Since one is moving, usually, there will be a constant, or fluid, set of SWR conditions thru out the drive. The average of these constantly changing conditions *can* adversely affect performance. As to the "cool" coil antennas, yes, they work. But I don't think they work *better* or *worse* than others. Their act-ual performance compared to other types is not really what sells them. It's the "pretty" plating, the dual coils that say to the uninformed, "Look at me, I'm COOL, I'm BAD." Ken, I can make you a "coil" antenna for around $30 that will work just as well as those "cool" ones, the expensive ones. Lots of these antennas are overpriced, I hate to tell you, and an ordinary whip will do just as well (usually). The secret is marketing--making something "look" so good that it has GOT to be better than everybody else's. But if it is looks you are after, go for it. It's just my opinion, after all, right?

Jerry

206. Re: Problem with Export Radios

Newsgroup: rec.radio.cb
Date: 2001-03-02 18:45:23 UTC
From: dinod@deltanet.com
Message-ID: <7TRn6.328710$ge4.117026707@news2.rdc2.tx.home.com>
Source record: 74681

My OPINION is that the FCC does NOT worry too much about 27.415 to 27.995.
They DO care about operations BELOW 26.965 and they DO care about the
complaints they get from interferrence issues.

My experience is that MOST operations in the freeband are nothing more
than enjoying the hobby. It is usually SSB with decent converstions.
Its too bad 30 to 40 is so dirty!

Do you hear much about the brothers getting busted on channel 6?

Enjoy the hobby and don't be an ASS! Its that simple.

Run BIG power and act like an ass and you will have problems.

I have yet to meet an Amateur who has a problem with the freeband!
Just stay below 28 MHz!

>One problem with export radios is that once you start trying to massively
>crack down what will be the result?
>If the FCC would just allocate 3 or 4 mhz say from 26 to 29mhz or 24 to
>27mhz so what. Heck most of the cb activity is around 27mhz. Go to 28mhz all
>I have heard with 1 or 2 exceptions is Morse and Spanish.
> FCC starts with trying to play hardball with the export distributors
>guess what? the Big Radio guys will sell legal Ham stuff. And with no
>license they are perfectly legal unless you key up and say AAUUDDIIOOOO!

Good comments Dick! I would agree! BUT I like AM and ONLY talk there
from 1 to 29. 30 to 40 is supposed to be for SSB. I was active with
a group in Southern California that talked on 35 LSB. It was great fun!

Those were the days!

Dave, I have heard of the disturbing the peace charge being applied, as well as public nuisance charges, but they happened a very long time ago, and/or either plead down, had charges reduced or dismissed altogether. A good lawyer was always able to beat this charge if the device receiving the interference was constucted to accept it and displayed such type warning label UNLESS the charges brought were by the FCC. I am curious Dave, was this pre or post 2346? Small town or metropolis? L8R!

RR Electronics Forums
Save Ur Drive Deadly Virus
United Kingdom
489 Posts Posted - 02 Mar 2001 : 08:29:24
Virus Warning.

Please be vigilant for a new virus called "A Virtual card for you"
or "An Internet Flower for you"
If this note is correct, there is currently no protection available
for this. (Can take up to 48 hours, from release).
Consequently our AntiVirus system may not pick this up.
As long as nobody opens an attached message with this title we are ok.

Steve Shuttleworth
Subject: Deadly Virus FYI We received this e-mail at work yesterday.
Deadly Virus A new virus has just been discovered that has been classified
by Microsoft (www.microsoft.com http://www.microsoft.com)and by McAfee
(www.mcafee.com http://www.mcafee.com) as the most destructive ever This
virus was discovered yesterday afternoon by McAfee and no vaccine has yet
been developed.
This virus simply destroys Sector Zero from the hard disk, where vital
information for its functioning are stored.
This virus acts in the following manner: It sends itself automatically
to all contacts on your list with the title "A Virtual Card for You".
As soon as the supposed virtual card is opened, the computer freezes
so that the user has to reboot. When the ctrl+alt+del keys or the reset
button are pressed, the virus destroys Sector Zero, thus permanently
destroying the hard disk.
Yesterday in just a few hours this virus caused panic in New York,
according to news broadcast by CNN www.cnn.com http://www.cnn.com
This alert was received by an employee of Microsoft itself.
So don't open any mails with subject "A Virtual Card for You". As soon
as you get the mail, delete it. Please pass on this mail to all your
friends. Forward this to everyone in your address book. I would
rather receive this 25 times than not at all. Also: Intel announced that a
new and very destructive virus was discovered recently. If you receive an
email called "An Internet Flower For You",
do not open it. Delete it right away! This virus removes all dynamic
link libraries (.dll files) from your computer. Your computer will not be
able to boot up.

I got some great info that confirms my suspicion of the radiation of RF off my Tower and mast.

Do to the fact that my tower is free standing its a real mother^&*^* to work on the antenna. It was a miracle to get this Sigma up there. I am not up to the task of trying to decouple the antenna from this tower. I fear that once I do this I will have to retune the radiator. For that to happen I would need a Cherry picker with at least a 70ft boom. In other words its not worth it to me. Jay is right about the Sigma and it not lasting. My Sigma is 3 years old and its leaning badly.

SO... I am going to put another antenna up. I need some advice from you guys on my options. I would like your opinions good and bad.

FYI: I have a 45 ft free standing Rohn tower. 10 ft mast pipe. I have 8257 Belden 8u but will be putting going to LMR 400 or LMR 600 with the new antenna.

I have sent mail to Jay asking about his antenna's. I have not recieved a reply at this time. I am sure he will get around to it :) Until then my other choices are:

(ABS 1600). No tune.. That means I put it up once on that tower. Its light and I could afford to put an additional 5-10 feet of pipe up. No counter poise? Will it bleed?

(Spectrum 1600) I have heard good things from people. 5/8th wave with Counter poise. Friend ordered one to replace his Sigma. Should have it up within a week. His Sigma bleeds bad as well. Throughts on Spectrum?

Thats all I could come up with. If you have another choice to offer please post it. The Sigma is leaps and bounds better than my A99 in performance. I am very happy with the performance of the Sigma but it does bleed and its a weak design. I would like something that is less opt to bleed and something that will at least = the Sigma in performance. Both of the antenna's above can be raised an additional 5-10 ft. From the ground to the tip of the sigma is 82 ft. With a 20ft antenna the tip will be about 70 ft. I could go that additional 10 ft and get to 80. Will performance come close to this Sigma?

Sorry for the long post again. I want to make a educated choice.

MC

227. Re: Power mic question

Newsgroup: rec.radio.cb

The 575 has the same mic element as the D104. The only difference in sound is the 575 has tone. You will not notice anything with a switch to the D104 other than your thumb may turn red from that damn little button.

The road devil is horrible in my opinion. I like to talk close to a mic with it almost resting on my lips. If you do this with a Road devil you get a muddy low pitched sound. Pull away about 3 inches and it sounds great. Problem is hold habbits are hard to break..

The best mic I have ever heard on a 29 was a EC 2018turbo. With echo turned off its clear as a bell and loud, loud ,loud. Problem with this is RF limited went to a cheap sounds like hell element. If you can get an old one you will like it. This mic will modulate a Black face Johnson unlike any other mic out there. It must be a perfect match. Not even a D104 power stand has a chance in keeping up with it.

Last choice is a RK56. If the radio has the audio turned up this mic will sound good and loud.

U.S. energy beam lightly scorches protesters - "Easier than an a-bomb"
by John Chipman The National Post 03/01/2001

http://www.nationalpost.com/home/story.html?f=/stories/20010302/489908.html

The Pentagon unveiled its latest weapon yesterday, a non-lethal beam that fires electromagnetic
waves at the skin, heating it instantly to painful levels without internal or permanent damage.

Touted by enthusiasts as the biggest military development since the atomic bomb, the Vehicle
Mounted Active Denial System (V-MADS) is easily transportable and is considered ideal for "crowd
control."

By using certain portions of the electromagnetic spectrum, it penetrates the skin to a depth of
about 1/64th of an inch.

Used properly -- that is, for less than three seconds -- it causes no serious long-term injuries.
The U.S. Marine Corps, which developed the V-MADS over the past 10 years along with the U.S. Air
Force, would not say what happens if the weapon is misused.

"This is going to save lives," said Major Dave Anderson at a briefing in Washington yesterday,
where a model of the weapon was on display. "It gives the commander another option that is not
deadly force ... We are very excited."

Easily mounted on a vehicle or a roof, it can be fired from up to 750 metres away, making it
especially useful in dispersing crowds.

"I can tell you we have no plans on using this on Canadians," noted one U.S. official yesterday.
"We don't see our embassy in Ottawa being besieged any time soon."

Maj. Anderson said the waves utilized by the V-MADS fall between microwave and infrared rays on
the spectrum.

The waves, whose exact length, frequency and amplitude are classified, cause water molecules in
the skin cells to vibrate. That rapidly produces heat and causes discomfort. The invisible waves
can pass through clothing but halt just beneath the skin's surface.

Maj. Anderson said the heat irritates nerve sensors in the skin but does not damage internal or
reproductive organs. The weapon's beam has no effect on electrical equipment, such as pacemakers
or computers.

Project officials said the human body begins to feel pain at about 113 degrees Fahrenheit. The
V-MADS weapon heats the skin to about 130 degrees Fahrenheit in less than three seconds.

"I lasted about a second before I pulled my hand away," said Maj. Anderson, who described the
sensation as similar to touching a hot light bulb. The sensation stops, with no lingering effects,
as soon as the person leaves the beam's path.

A report this week in Marine Corps Times described the technology as rivaling the atomic bomb.

"That's a bit of a stretch, but it's in the ball park at least," said John Pike, director of
GlobalSecurity.org, a Washington defence policy organization.

He said it could be a very useful tool during peacekeeping missions in which outnumbered soldiers
must disperse a hostile crowd without causing any permanent injuries.

"What they want is something that will heat people up enough that they will run away, but not heat
them up so much that they will explode," Mr. Pike said, adding it is too early to tell whether it
will be effective.

First, scientists must continue tests to guarantee V-MADS is truly non-lethal, he said, and then
convince a skeptical public.

"I think the first problem will be difficult and the second problem will be very difficult," Mr.
Pike said.

Military officials say the effective range of 750 metres means V-MADS would allow soldiers to
remain outside the reach of most small arms fire.

Scientists are developing a vehicle-mounted version, and Maj. Anderson added they are also looking
at plane-, ship-mounted and hand-held models. The weapon will not be ready for field use until at

least 2008.

Maj. Anderson maintained that people's involuntary reaction to resist pain will force subjects to
flee before the weapon can do any permanent damage. But the V-MADS' operator will determine how
long it is trained on a subject, and when pressed, Maj. Anderson admitted it could be dangerous if
used improperly.

While military officials say its development cost -- US$40-million over 10 years so far -- and
complexity will keep it out of enemy hands, Mr. Pike was not convinced.

"It's a heck of a lot easier than an atomic bomb. Just do the math, the military said it spent
less than $50-million developing this thing. There's a heck of a lot of countries that have
$50-million to spend."

And with that comes the threat a rogue state such as Iraq could develop a more dangerous version
and use it against American troops, he said.

"The fact that Captain Kirk says set the phasers on stun, definitely means the phasers have
another setting. Just because the Americans have them set on stun does not mean the Iraqis
would."

MC, when did they switch the elements? I know two guys that just bought one each. Don't know if they were old stock or new. Is there an easy way to tell the difference? They are super loud, but they have that whammy-thing that just begs people to play with it. One is on a Galaxy 88 in a truck and the other is on a Washington Base. It appears to be louder than the D-104's on all the radios I have heard it on so far.

> the interference was constucted to accept it and displayed such type
> warning label UNLESS the charges brought were by the FCC.

I don't think it's that clear cut. I checked Part 15.19. Under the paragraph labeled "1":

Receivers associated with the operation of a licensed radio service, e.g., FM broadcast under part 73 of this chapter, land mobile operation under part 90, etc., shall bear the following statement in a conspicuous location on the device:

This device complies with part 15 of the FCC rules. Operation is subject to the conditions that this device does not cause harmful interference.

There is nothing there that says it has to ACCEPT any interference. Then under paragraph labeled "3" in the same section:

All other devices shall bear the following statement in a conspicuous location on the device:

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions : (1) This device may not cause harmful interference, and (2) this device must accept any interference received. Including interference that may cause undesired operation.

It seems to me the FCC makes a fine, but special exception, for devices used to receive transmissions from a licensed service. So using Part 15 as a defense against a complaint from a neighbor that your transmissions are coming over their stereo may not work. Now if the complaint was the same, but it was the cheap cordless phone, then I think the disclaimer, in Part 15.19 paragraph 3, above would apply.

there lifetime labor warranty is a joke. read it below... It doesn't cover relay, rectifiers, transformer, or transistors, So please tell me what else would anyone have a problem with on the amp ? What will they replace the on/off switch? the led lite? Ok so lets say you ship them the unit to fix and it is one of parts not covered they make there money off the parts . hey lets say your transformer goes Bad, ok we will put it in for free but its going to cost $200.00 It only costs us 60.00 but we charge you 200.00 but we don't charge any labor ... haha What a false bag of shells they are peddling

"All X Force Base Amps come with a Life Time Labor Warranty.This Labor Warranty doe's not cover Shipping too and from the Authorized Warranty Repair Center customer is responsible for all Electronic Parts.
Transistors are Not covered by Warranty due to the fact that we cannot control the end user.
Relays, Rectifiers, and Transformers are covered by a 30 day Parts Replacement Warranty Only.
After the 30 Day Parts Warranty, Customer is responsible for all parts being replaced.

Thanks for the advertising, Andy, although you really weren't trying to. I have two radios in one auction, one spotless and one shows a little wear. Both come with stock Mics. If anyone is interested, the auction ends tomorrow. The URL is:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1217989377&r=0&t=0&showTutorial=0&ed=983845233&indexURL=0&rd=1 (You may need to cut and paste)

It may be easier to just do a search for the Item #1217989377. They started at 10 bucks for both and if you can believe it, they haven't gotten any bids! 25 Dollar "Buy it Now".

Thanks,

Jeff

I beg to differ. Copper even sells the video that shows you exactly how to
do it. Uppers and Lowers. I did mine and had great results. As a matter of
fact, it was easier than the usual Cobra/Uniden PLL channel expansion. 2
switches and no funky gaps.

These "kits",

The new ones have a black plastic grille. The old ones have a metal screen.

They are super loud, but they have that
> whammy-thing that just begs people to play with it. One is on a Galaxy
> 88 in a truck and the other is on a Washington Base. It appears to be
> louder than the D-104's on all the radios I have heard it on so far.
>

They work great on the washington. I have one on my old washington now. Nice
deep smooth tone. Tons of audio.

I dont like them on a Galaxy. It makes the talk back screach. I have found
that the RK56 is the best mic for them. That or the stock mic.

Tip:

If you have a new one and an old one... The new board is better and has more
power. Use the new board with the old element.. That is the best combo.

MC

What a wonderful time we live in. What type of monster would sit around thinking of ways to heat people up in an effort to control them? I guess madmen like this will never be happy until they either kill us all off or are able to fully control us with their technology. If these people are not stopped, can you even imagine what our future will be like? Concepts like freedom, individual rights, and self-determination, will cease to exist.

I hear ya' Leland, but when I said most lawyers beat this I added "unless" it was brought by the FCC. When the charge is disorderly, disturbing the peace, public nuisance, etc., it isn't a Federal charge, it is usually a local government and a conviction is rare, if not unheard of these days. 2346 could change that. It most likely appears it will be up to localities to dish out whatever they see fit.

Andy,
The weak point on this little rig was always the 7217. Like many of the
small Cobra radios, they would blow the audio chip about once a year.

Three seconds is a long time to hold a narrow beam on a moving target.

Especially if that target is merrily cranking off lead in the direction
of the one with the scrooch gun.

Oil seeps all over the ANWR, heck there were gas wells drilled there in
the 1930s &40s
to supply Army bases with cheap fuel. Really the gas and oil were found
by mistake when
drilling water wells. Plenty of Oil, lets go!

I heard about this about a month ago, but it's been around for awhile.
Masers were the first indication that this stuff existed. Add a simple
focusing lens and a bit of research, and you have a long-range BBQ ray
gun. The scary part is that different organs resonate at different
frequencies - the skin, brain, eyeballs, liver, etc. The operator can
simply dial up a menu, point and fire. With good selectivity, it could
possibly nuke someone without damaging their surroundings, even inside
their home. I can only speculate, but the US govt habit of testing its
secret weapons on an unsuspecting public makes me think that this
weapon may be responsible for some cases of "spontaneous combustion".

Sparky, FLRC

I am a Shortwave Listener, I have recently found an intresting Frequency.
27.555 USB Which I found out is known as the International DXing Channel.

I want to know if this frequency is legal or not. I have heard some people say
its legal, some say not legal. One person claimed to have a CB Call sign that
was made up of initials and the 1st 2 digets of their zip code.

Hopefully I will find a straight answer here, hopefully not hehehe :)

Thanks for your help

Tony

Legal for the FCC to assign to anyone dumb enough to want an allocation at
27 MHz, what else?

Dwight, I am 96% sure that hams were involved in the design of this project.
You know...those strange dweebs who wear 3 or more HT's on their belt
with coke-bottle glasses, who are highly sought after by engineering deparments
of defense contractors? They've just found a way to project the "RF burn"
effect outward. Probably by finding the resonant fredquency of the cellular
membrane of human skin and tuning a transmitter to that frequency.
(aKa: it's a microwave oven without a door and little lamp for people)

Probably something dreamed up by an eccentric cloistered ham in NY or NJ who sells
tubes on the weekends at hamfests...

More like big profits for some contractor Dwight, who'll sell this equipment
to the military for a 50,000% inflated price - remember the $1500.00
toilet seats? There back and Busch Jr. is in the white house - scary.

> Dwight Stewart (W5NET)

The FCC doesn't govern the world. For all practical purposes, it is against FCC rules and regulations to TRANSMIT on 27.555 from within the United States. Do you live near either coast and have access to a boat? Cruise on out into international waters like the gambling boats (I think it used to be 7 miles and they changed it to 12) and talk your heart out. This is one technique that has not yet been challenged in the courts.

> by mistake when
> drilling water wells. Plenty of Oil, lets go!

Think oil from Alaska is gonna' bring down gas prices?... think again.
... it'll take some 7-10 years to bring that Alaskan oil to market, if indeed it ever sees the US market at all.
... it'll be drilled, pumped, shipped, refined, and PRICED by the likes of Standard Oil, Mobil, & Chevron, etc (after coming out of US public land)
... the last time we tapped the Alaskan oil reserves was during the OPEC oil embargo. Anyone here remember who benefited from all that Alaskan Oil? Wasn't the US. 100% of that oil was sold to Japan because it was more profitable for the US oil corporations.
(..not that I'm against drilling in Alaska... I just doubt the American Consumer will ever see any benefit from it)

Still think those nasty ARABS are behind all these gas price and Natural gas price increases?

The US imports NO natural gas, yet by mid 2001, Americans will be paying 80-100% more for the same product in most states. Remember... Arabs don't drill, pump, ship, or price the oil (they only get a royalty).... Big (mostly US) Corporations DO. Remember that the next time you read about those nasty ARABS and the next gasoline price increase in the same sentence... and don't forget to look up how the US oil companies are faring at the same time. Last summer, with ever-increasing pump prices and the blame being put on OPEC, US oil companies enjoyed 150-300% profit 'enhancements' over previous years (I don't recall them hurting for $$ back then!)....

Yeah, that's right Americans! Go on believing that those nasty ARABS are to blame... SUNOCO, TEXACO, STANDARD OIL, CHEVRON and their likes are laughing all the way to the bank! With 2 'Oil Men' in the highest office in the land, I can't wait to see what happens next!

Hey Cap'n! You're dead on about us not going to benefit from any Alaskan oil, and OPEC is indeed an evil, corporate whore, but don't you believe that the sand dwellers have at least a hand in manipulating the price of a barrel of oil? After all, through the work of Abdulla and other infidel sheiks, do they not control supply to a certain extent, (how much is being released) resulting in not enough to keep with demand, which in turn causes a direct price fluctuation and manipulation, reflecting the so called "shortage"?

Greetings!

However, I didn't say it was the best thing since sliced bread.

If so inclined, they can be used for...

Paperweights...
Patio Stones...
Wheel Chocks -- When you can't locate a SkyWave amp...

Parts can be used for...

LED-bargraph for VU meter or Voltage sensing, or other purposes like
Automotive Battery Status indicator, overvoltage e&c...

Cannibalized for fixing more expensive radios...

Good Extension speaker for a Garage...

Hundreds of uses, too many to list here...

Disclaimer...

277. A Modest proposal

Newsgroup: rec.radio.cb
Date: 2001-03-03 16:01:16 UTC
From: Richard McCollum <rmccoll@radiks.net>
Message-ID: <Iw8o6.358$pQ3.940065@nntp3.onemain.com>
Source record: 74703

As an OT in radio if not CB I watch essentially the same arguments go on - and on, and on. The current ones, and they are intertwined, are freebanding and the search for the quiet or company channel among truckers which has caused penetration of the 28 MHz barrier. In the middle of all this is the all-pervasive 'headcase problem' common to any service where all that is required is a mike or keyboard to be a dangling hemorrhoid. A fourth looms: Any reasonably clear channel is a phone line back to San Hoosiwhats; call this the Channel 9 problem.

So any reasonable solution starts with getting the truckers off CB and at the same time off of 28.085 and 28.535. It starts with the idea that use of radio to communicate among moving trucks is perfectly legitimate and in keeping with the Land Mobile use of the frequencies. So here is the script: 20 channels, FM and nothing else, automatic return to the calling/emergency channel 1, CTCSS required (continuous tone controlled subaudible squelch) using the M1-7 freqs 203.5 to 250.3 reverting to M1 and switchable between 5 and 25 watts. The choice of 19 channels and 7 subaudible squelch codes comes as close to privacy as a shared service can get.. Channel spacing - based on the 12.5 that is fairly universal on UHF - would be something weird like 12.9 kHz so that no current radio could get there. So the band would use 24.495-26.965 using that spacing. The combination of the 200 Hz whistle and weird spacing might get the truckers left alone for a change. A ten-second transmit timer on Channel 1 would also get the jabberjaws off of that channel quickly.

It would be desirable to limit purchasers to holders of Class A CDLs and find some way to control the Truckstop Annies and Andrews but as a practical matter this would take more bureaucracy than is likely to happen. If a national organization were willing to take on the paperwork, it might be possible to set it up like a VEC. Ideas????

The idea of hobby use of 27 megs is somewhat out of my area of knowledge so help me here. As the world already has a hobby service and has had it forever it should not be too surprising that the powers that be don't see a need for another one. Yet it is a bit much to expect that when DX appears it will not be worked. Hell, taxi dispatchers jabberjaw when the tropo is in on VHF. As far as power goes, the most lawless public service band is the politzia themselves; I have seen amps in places where you could see the entire jurisdiction from the roof of City Hall -- tropo has weird effects on Police Chiefs and mayors.

But the lawlessness of others is not sufficient excuse for lawlessness oneself. Every parent hears that from the acne and training-bra set and it will not be dignified here. Yet in the long run of things, when a university puts up a new library for example, it is well-advised to pave

the obvious paths and come back a few years later and pave the ones the students create; beats hell out of planting land mines to keep them in the righteous routes. Witness the evolution of DUI statues over the same period: several states had made first-offense DUI felonies but as a practical matter, you had to run over 5 pregnant nuns to get cited and then piss-off prosecutor, judge, and jury to get convicted; public acceptance of the necessity to purge the planet of alcohol-soaked drivers awaited a lot of work by MADD among others. Drunks are no longer funny as they once were and the fatality rate shows it.

So SSB operators above the legal 40 are fairly benign and for the most part do not cause a lot a trouble. This is not going to be legalized in your lifetime but at the same time, I doubt any enforcers (if indeed there are any these days) really give a major shit. They have priorities as well. Asking the FCC to take on the ITU among others is asking too much over what are in the last analysis garbage freqs left to Land Mobile because no one else wants them.

What does need to be attacked is excessive and dirty power run by idiots, headcases, and flakes. This is the root of the HR2510 legislation. The root cause of this is Ancient Modulation or Antique Mary. It is just too easy to screw it up. So perhaps the solution is to outlaw Ancient Mary and come down hard on it outside the legal 40 and let the locals handle the nuisances. While I am not a great fan of limiting ham gear, it is probably time to outlaw AM on new gear in the ham bands as well.

Thoughts Gentlemen???

Dick NBK

Hmmmm, seems like if this were used in a "crowd" situation, those at
the back (read that closest to weapon) could become "toast" when a
"panic" to evacuate the area ensues (like everybody trying to
'bottle-neck' it thru a door or small escape route). Or when someone
passes out or gets injured from the mad rush, they wouldn't be able to
get out of beam's path.
Bet the guy that came up with this was one of those Dumb-A** people
that stuffed a Poodle in a microwave to dry it off!!!

Doh!!! =---> Poooffff!!

>anything.
>

That particular frequency may not be delegated by the FCC to any particular entity, but one or more surrounding frequencies may be. This being said, the possibility of interferance with adjacent frequencies may be the cause of Sparky not being able to find that EXACT frequency doing a searcch on the FCC database. But I do assume from his comment that he does not believe that what this frequency is being used for is legal. This topic has already been discussed many times and with great dogma on both sides of the issue. It will do no good to "flame", for this is the last time that I will post on this or a similar thread.

Well dorkowitz...it is clear that you are on me like a cheap suit, as you said. Whoopie-doo? It shows your obsession.
However, it may dawn on you that there are about 10 million people in Ohio, and that the possibility exists that the sender of your dead fish was not me. It was not me, twistie. I had nothing to do with it at all, and no knowledge of it until you posted it here. I am glad you posted this info, though...I died laffin reading about it. You deserve worse, gayboy.
I will be glad to send you a dead fish, a hunk of cat turd for your midnight snacks, or anything else like that if you want to.
I will post right here on the NG that I am about to do it as well.
My opinion is that you should forward the matter to the USPS inspectors and try to find out who actually did it. Someone knew how you would react and and they are laughing at you just like I am.
May I ask what city it was mailed from? I could say that I got something from FLA too, and make a generalized accusation as you did. However, Dry Tortugas is a long way from Tampa...
Perhaps you are in need of help, twistiefag. I think so.
You have been told in the past that others on here were not me,etc. You continue to live under the wishful delusion that I am the only person on here who opposes your brand of sociopathic behavior. As for hams on here not liking me...hey thats cool...most of 'em are suck asses or persons profiting from illegal activity, so piss on 'em.

If ya get anything else, like dried catshit or dead fish, in the mail...please...please keep us updated. It provides a good laugh.

One last question. Did you wash your hands to clean off the fish smell before you fondled your balls?

If the issue is lawlessness you proposal might work and i would add some comments but I think the reply by NOBK and the pervasive attitude by many Hams here with the landscape of ARRL's attitude towards the no-code liscense points to the real reason why illigal radio is even an issue.
You are a reasonable man and I can respect that. CB users also face the same problems but Honestly with 40 channels we can just switch. Usually it's "hey bob go to the first number of your truck"
Unfortunatly many Hams have the attitude of " If I had to do it they have to.. it's just NOT fair" There is no way that any cb'er can cause problems to the ham community since even the export radios barely touch the HUGE bandwith that Hams have. Heck the FCC realocated the 220 to 222 because Hams have more bandwith then they can even use! So any idea that the issue is CB'er infringeing on Ham territory and that the Ham can't enjoy his hobby is bunk.
The real reason Hams go nuts is reverse class envy.
As for commercial porposes CB works fine and there is no real problem. Frankly truckers don't even like it at recievers and shippers. We want to sleep and when the truck is ready we want a knock on the door to wake us up. Not waiting for a call on ch 36.
As for traffic one when your in it info means nothing you still can't move. Traffic happens mostly in cities where the 50 kw am stations have news and traffic. Any trucker will tell you a 3 watt radio with roger beep is more annoying the any megawatt linier amp.

Twistie whines and N8WWM chortles!

Group: rec.radio.cb Date: Sat, Mar 3, 2001, 4:46pm (EST+5) From:
N8wwm@aol.com (LAUGHING AT TWISTIEFAG)
Well dorkowitz...it is clear that you are on me like a cheap suit, as
you said. Whoopie-doo? It shows your obsession.
However, it may dawn on you that there are about 10 million people in
Ohio, and that the possibility exists that the sender of your dead fish
was not me. It was not me, twistie. I had nothing to do with it at all,
and no knowledge of it until you posted it here. I am glad you posted
this info, though...I died laffin reading about it. You deserve worse,
gayboy. I will be glad to send you a dead fish, a hunk of cat turd for
your midnight snacks, or anything else like that if you want to. I will
post right here on the NG that I am about to do it as well. My opinion
is that you should forward the matter to the USPS inspectors and try to
find out who actually did it. Someone knew how you would react and and
they are laughing at you just like I am.
May I ask what city it was mailed from? I could say that I got something
from FLA too, and make a generalized accusation as you did. However, Dry
Tortugas is a long way from Tampa...
Perhaps you are in need of help, twistiefag. I think so. You have been
told in the past that others on here were not me,etc. You continue to
live under the wishful delusion that I am the only person on here who
opposes your brand of sociopathic behavior. As for hams on here not
liking me...hey thats cool...most of 'em are suck asses or persons
profiting from illegal activity, so piss on 'em.
If ya get anything else, like dried catshit or dead fish, in the
mail...please...please keep us updated. It provides a good laugh.
One last question. Did you wash your hands to clean off the fish smell
before you fondled your balls?
<twistedhed@webtv.net> wrote:

"Sorry chump! Can't get rid of the IP headers
Why must my nic always be surrounded by the < > signs? Simple. You, as
a loser, are incompetent to figure out how to get rid of them. I live
along a swamp, Dougie. No mailbox along my house. look at your scratch
below. You started to use spellcheck, like a good chimp, but your lack
of proper grammar and punctuation, you cannot escape. Sowwy DOugie! You
really ought to try what I suggested....forge someone you do not have an
affinity for, someone on your intellectual level, one you can relate to,
begin, say, at the zoo, and digress as needed from there."

Oh you think you're so smart Dougie. Today in my mailbox I received a
neatly wrapped package containing a dead mackerel and the sender was
stupid enough to leaver an OHIO postmark on it. There's only ONE person

dumb enough to do that! Yes, that's YOU Dougie. You see I'm one step ahead of you all the way no matter if it's the < > in your fake headers or the way you obsess about gayboys and spew obscene filth into this NG, I can always tell it's you. And the worst part is that you have NO credibility and even your own kind spurns you. Don't that suck? So keep sending me dead fish in the mail if you want. There's NO way you can

297. CB and Ham compatability Question?

Just think- the quartermaster wouldn't need to pack any comestibles- just tell the soldiers if they want to eat, they have to win. Instead of k-rations or whatever they call them, you could have spice kits with ketchup and mustard and herbs.

Sounds like this is the remainder of Frank Burns' old group of Phoenix idiots.
Frank and some of the others have since passed on to the great D104 in the
sky...but about 10 years ago, these guys would trash 27.635 on a daily basis.
The FCC ran 'em off...then, they resurfaced on 27.365.

The reply using my call sign was, of course, not me: a) because I can use the English language, and b)I know how to do the . He is no more a ham than I fly from church steeples.

> You are a reasonable man and I can respect that. CB users also face
the
> same problems but Honestly with 40 channels we can just switch. Usually
it's
> "hey bob go to the first number of your truck"

And a lot do. But my monitoring of 28.085 seems to indicate that some do not. The search for the private, quiet, or company channel goes on in every service. Maybe it is time to give a generally hard-working group a place of their own where the squelch does not have to be set to 50 yards or less. The capture and quieting effects of FM make life a lot more tolerable than listening to Antique Modulation hetrodynes.

> Unfortunatly many Hams have the attitude of " If I had to do it
they

because
> Hams have more bandwith then they can even use! So any idea that the
issue
> is CB'er infringeing on Ham territory and that the Ham can't enjoy his
hobby
> is bunk.

Ten, especially the CW portion is not the ham's (and I exclude Codeless Techs from that definition) favorite freq except at the height of the spots. So we have tended to go somewhere else and you are correct, there are plenty of places to go. Being a dittybopper myself, there are a number of better places to go.

But if you happen to be a three-car family, having someone wander up and use your vehicles on the theory that he needs it worse than you do is still something of an irritation.

Yes, I did 20 wpm for the FCC. I did it 25 years ago when it made sense. I don't give a damn whether you do it or not. Life moves on.

The 220 reallocation was for United Parcel who never used it. That band was not a treaty band (10 and 12 meters are treaty bands) so FCC could and did reallocate it US only. That reallocation did point out, however, that there is no national band for trucking use. In fact I believe the Red Cross has the only national VHF frequency. UPS purposes are better served by satellite but their drivers might be a different story. The only thing this offers companies is the knowlege that their loads might not be tied up by drivers doing jail time.

> The real reason Hams go nuts is reverse class envy.

If you choose to believe that, go ahead. The fact that it is bullshit shouldn't prevent the enjoyment of a good story

> As for commercial porposes CB works fine and there is no real problem.
> Frankly truckers don't even like it at recievers and shippers. We want
to
> sleep and when the truck is ready we want a knock on the door to wake us
up.
> Not waiting for a call on ch 36.

You will note that it is a truck mobile band I am proposing. No shippers, receivers, or company.

> As for traffic one when your in it info means nothing you still
can't
> move. Traffic happens mostly in cities where the 50 kw am stations have
news
> and traffic. Any trucker will tell you a 3 watt radio with roger beep is
> more annoying the any megawatt linier amp.

Which is why I proposed FM with CTCSS (I should have also specced a squelch-tail eliminator like was used in the days of reeds for PL). The roger beepers will get theirs but it is not a regulatory function to anticipate every stupidity possible.

Incidentally, caliope noises on 2 meter FM repeaters give me gas. My repeaters IDed only at the end of transmissions in full deviation square-wave audio at 20 wpm. If you had a problem with quick thumbers, you just backed down the ID timer. Smash them a few times and your users get educated quick.

It follows all laws of physics and violates no known scientific principals.
The original question pertained to the frequency, not it's use.

Use of that particular frequency by Freebanders violates FCC regulations, as
if they care...

Have always liked the Pro 520 Uniden, but after picking up a new one recently for the "good" car (XYL nixed the UV3 stack w/ theTS50 in her Durango) for traveling, they have drastically changed the innards! Find an older 520, which are all over on eBay and here, as they can be peaked to a respectable level, good loud audio, and the variable RF gain is a nice plus over the 510 when the skip level surpasses the squelch threshold. Nice little rig! BTW, the little Italian amp works well!

Hi Jay,

I think you are being to harsh. Granted they are not the high Dollar 1/4 wall units you offer, but I have one made by CTE that has been up on a 40' push up pole for better than 2 1/2 yrs.. now and it works great! I'm not say that the material could not be better, but it seems to be standing up well enough from where I stand. Not all of us can afford a 500 dollar antenna for a hobby. I think for the $59.00 it cost me I got my moneys worth, and for 39.00 it would have been a real deal!

Newt

Heck no, but it will help with SUPPLY & DEMAND.

> ... it'll take some 7-10 years to bring that Alaskan oil to market, if
> indeed it ever sees the US market at all.

Alyaska Pipeline to Valdez is the transport mode. Valdez to the world.

> ... it'll be drilled, pumped, shipped, refined, and PRICED by the likes of
> Standard Oil, Mobil, & Chevron, etc (after coming out of US public land)

Price determined by the supply & demand force at work at the market
place
(read-futures and spot trading of oil & gas)

> ... the last time we tapped the Alaskan oil reserves was during the OPEC oil
> embargo.

We are still pumping the North Slope (Prodhoe Bay) and it supplies us
with 15%
of our oil in the US!

Anyone here remember who benefited from all that Alaskan Oil?
> Wasn't the US. 100% of that oil was sold to Japan because it was more
> profitable for the US oil corporations.

Transportation is easier to Japan.

> (..not that I'm against drilling in Alaska... I just doubt the American
> Consumer will ever see any benefit from it)

>
> Still think those nasty ARABS are behind all these gas price and Natural gas
> price increases?

Supply and Demand.
>
> The US imports NO natural gas, yet by mid 2001, Americans will be paying
> 80-100% more for the same product in most states.

Natural Gas is priced at the Henry Hub on the Futures Market (Complex
item to
discuss even in itself but here goes, Henry Hub at Henry, Texas is most
of the
Natural Gas Pipelines Converge or are able to be routed through. Most
gas is produced
not by major oil cos but by independent oil cos who sell their product
as to what
the daily market will bring. If there is a demand, supply of natural
gas is somewhat limited by pipeline dynamics and we have over pumped our
oil & gas fields and
new stuff in the US isn't coming on stream since there isn't any new
major discoveries being made with all the resticted areas that can not
be drilled in.)

Remember... Arabs don't
> drill, pump, ship, or price the oil (they only get a royalty)....

Arabs countries own their oil and the companies operate the oil fields
for
a cut of the take. Saudi Aramco is the operating agent for several
major
oil cos but the Saudi Gov't controls theose fields, methods of
production and
disburses the money after the oil is sold.

Big
> (mostly US) Corporations DO. Remember that the next time you read about
> those nasty ARABS and the next gasoline price increase in the same
> sentence... and don't forget to look up how the US oil companies are faring
> at the same time. Last summer, with ever-increasing pump prices and the

> 'enhancements' over previous years (I don't recall them hurting for $$ back
> then!)....
>
> Yeah, that's right Americans! Go on believing that those nasty ARABS are to
> blame... SUNOCO, TEXACO, STANDARD OIL,

Question-who is Standard Oil, it hasn't existed since 1911 (HINT-see
seven sisters)

CHEVRON and their likes are laughing
> all the way to the bank! With 2 'Oil Men' in the highest office in the
> land, I can't wait to see what happens next!

Lets draft AL Gore and start pushing our cars and turn out the lights
(oops,
I forgot, they are already doing that in California-DAMN, why can't we

have cheap
energy like them!)

Take care Peakaboo, It was a pleasure meeting you at Hot Springs and I appreciate all the technical help you have given me in the past. I dont blame you for leaving, I haven't posted much here lately my self. All good things must come to end, unfortunately due to a few idiots. It is also unfortunate because they will feel like they have defeated something, truth is the have only lost another great contributor to this group.

peace,
KRS
A.KA. Gettoway Driver
So. Ca.

I'm new with CB's and was hoping someone could answer a question about a Cobra HH-35. Just purchased a reconditioned handheld unit and tried using it in a car with no success. Bought an antenna for the trunk and still getting bad reception. Just wondering if radios inside the car will add to reception problem or is it that the unit is a shitty one to begin with. Any help would be apprciated. I may have given enough info to help, if so let me know what you need to know and I will post,

Thanks
Mike

339. Re: The "new" Starduster antenna?

Newsgroup: rec.radio.cb
Date: 2001-03-04 04:22:27 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3AA1C303.AFBD83B6@qnet.com>
Source record: 74814

Hello Newt: Yeah your right I'll go with all that, that you said.

The tubing wall thickness was .250" just for the two 12 foot base lengths for the 20 meter test antenna, I use .058" wall thickness for all the rest of the antenna elements, and at the stressful points it is internal reinforced.

The antennas I have are no where near 500 dollars. Depending on the model and how much internal reinforcement, the price is around 200 to 279 dollars, but most all the antennas have been traded for testing and evaluation, how else is it done?

The point I was trying to get to, was I am not about to offer the cheap mickey mouse antennas to anyone, especially a local guy, who I know will want help on the roof. And the antennas here that have failed due to wind damage are the Sigma 4, MaCo V5/8, Spectrum 1600, and Super Magum, and all of the cheap shit foreign models to vast to list.

This is why I build the antennas to last, the local winds of the Mojave Desert are death to the cheap stuff. I believe a long lasting antenna that is designed to be bullet proof is marketable. Its cheaper and easier to put a antenna up once than, every few years.

Hope your antenna lasts and works for you. I have been asked to make a bullet proof Starduster, a few times. But after using a Mastodon 5000 or Interceptor 10K, you won't want anything else. If I may be so bold.

I am a Shortwave Listener, I have recently found an intresting
Frequency.
27.555 USB Which I found out is known as the International DXing
Channel.

I want to know if this frequency is legal or not. I have heard some
people say
its legal, some say not legal. One person claimed to have a CB Call
sign that
was made up of initials and the 1st 2 digets of their zip code.

It is not a legal frequency for CBers. It is certainly assigned to some service, or in a guard band between service. The US Government is the most likely legal user - although they have pretty much abandoned the band.

The FCC quit issuing licenses a couple of decades ago. At the time, they suggested you make up your own call - if you insisted on having one. One recommendation was your initials followed by 5 digits of your zip code.

At the time, that was the case. The only time another call was inserted
was if the operator was exceeding the privleges of the station license --
with a 1x2 that's hard to do. It hadn't been that long when even that was
allowed.

You may well be right these days.

Lets not make this a political issue, or divide ourselves by trying to blame individual groups. Its not about Democrats or Republicans (the research had to have started while Clinton was in the White House, but I don't doubt Bush will love it).

Instead, this is about everybody outside of the power elite, and _ALL_ of us will have to live with this stuff in the future.

Your attributed the above to the wrong person, W4JLE. I didn't write the material you quoted - it was written by someone else in reply to something I had written earlier. And you may want to read what I wrote in reply to that (about not turning this into a political debate between the two parties).

All you have done Doug is cause everyone resort to email where peoples business is private. If your true goal is to expose what goes on in the CB world it only backfired on you. I am not leaving because of you. I killfile your post the minute I see them (they are obvious, you are predictable) \. The reason I am not interested in this group anymore is because no one in the group discusses what the group was setup for. I know I will still hear you on 6 meters but that is only when I have all background noise turned off and a cheap modified CB preamp on.

```

Since it's stated purpose is "crowd control," I don't think that the beam on the fully functional unit will be that narrow. Since it's vehicle mounted, one could sit inside an armored vehicle, or in a concealed position, to use it.

Just for kicks, what happens if it is left on for say 2 minutes instead of the recommended 3 seconds. Do you come out looking like a cup of coffee hot from the microwave? What if you put it in a storeroom in a skyscraper, preset a timer, and just left it on?

The possibilities are endless...and a little scary.

Hello QRN 200: What a goof ball thing to say, usual for you.

Nobodys holding 11 meters hostage. Face the facts that the FCC put a Citizens Band Radio Service on a skip rich HF Band, and the people like to shoot skip, love the informal way to chat with others, and just have a good time.

But better times are coming. FRS is here, GMRS is here, and now MURS is off to a slow start, manufactures are starting to sell their MURS radios (even at radio shack). And not to soon away the morse code requirement will be dropped from the amateur radio testing requirement, which will spur more activity, and be a real boost in the arm for amateur radio. Not like your unfriendly and snotty remarks. If anything is shooting amateur radio in the ass its assholes like you with your bull shit attitudes and remarks, that give amateur radio a real bad name. I wish I had a dime for every time I heard someone say "Id get a ham license if those bastards went sooooooooooo snotty".

Nobodys leaving town, the sun spot cycle may have all ready reached its peak, but the skip will be running for a few more years still.

Jay in the Great Mojave Desert, ... just down the road ah way from the fillin station.

An Arab has spent many days crossing the desert without finding a source
of water. It gets so bad that his camel dies of thirst. He's
crawling through the sands, certain that he has breathed his
last breath when all of a sudden he sees a shiny object sticking out of
the sand several yards ahead of him.
He crawls to the object, pulls it out of the sand, and
discovers
that he has a Manishevitz wine bottle. It appears that there may be a
drop
or two left in the bottle, so he unscrews the top and out pops a
genie.......But this is no ordinary genie. This genie
appears to be a
Chasidic Rabbi, complete with black alpaca coat, black hat, side curls,
etc.,
"Well kid," says the genie."You know how it works. You have
three
wishes."
I'm not going to trust you,' says the Arab. "I'm
not going to trust
a Jewish genie!"
"What have you got to lose? It looks like you're
a goner anyway!"
The Arab thinks about this for a minute, and
decides that the genie
is right. "Okay, I wish I were in a lush oasis with plentiful food
and drink."
******POOF*********
The Arab finds himself in the most beautiful
oasis he has ever seen
and he is surrounded with jugs of wine and platters of delicacies..
"Okay kid, what's your second wish?"
My second wish is that I were rich beyond my
wildest dreams."

*****POOF******
The Arab finds himself surrounded by treasure
chests filled with
rare old coins and precious gems.
"Okay kid, you have just one more wish. Better
make it a good one!"
After thinking for a few minutes, the Arab says,
"I wish that no
matter where I go beautiful women will always need and want me!!!"

*****POOF*****
He is turned into a tampon.
>
THE MORAL OF THE STORY: If you do business with
a Jewish genie, there's going to be a string attached.

Subject: Texas Chili Tasting Judge
Notes from an inexperienced Chili Taster named FRANK,
who was visiting Texas from the East coast:

"Recently I was honored to be selected as an outstanding
famous celebrity to be a judge at a chili cook-off in Texas,
because no one else wanted to do it. Also the original
person called in sick at the last moment, and I happened
to be standing there at the judge's table asking directions
to the beer wagon when the call came. I was assured by the
other two judges (native Texans) that the chili wouldn't be
all that spicy... besides they told me I could have free
beer during the tasting, so I accepted."
Here are the scorecards from the event:

Chili # 1: Mike's Maniac Mobster Monster Chili
JUDGE ONE: A little too heavy on tomato. Amusing kick.
JUDGE TWO: Nice, smooth tomato flavor. Very mild.
FRANK: Holy shit! What the hell is this stuff?
You could remove dried paint from your driveway with it!
Took me two beers to put the flames out.
Hope that's the worst one, these Texans are crazy.

Chili # 2: Arthur's Afterburner Chili
JUDGE ONE: Smoky, with a hint of pork. Slight Jalapeno tang.
JUDGE TWO: Exciting BBQ flavor, more peppers to be taken seriously.
FRANK: Keep this out of reach of children!
I'm not sure what I am supposed to taste besides pain.
I had to wave off two people who wanted to give me the Heimlich.
They had to call in 3 more beers when they saw the look on my face.

Chili # 3: Fred's Famous Burn Down the Barn Chili
JUDGE ONE: Excellent firehouse chili! Great kick. Needs more beans.
JUDGE TWO: A beanless chili, a bit salty, good use of red peppers.
FRANK: Call the EPA! I've located a uranium spill. My nose feels
like I have been snorting Drain-o. Everyone knows the routine by
now: Barmaid pounded me on the back, now my backbone is in the
front part of my chest. More beer. I'm getting shit-faced.

Chili # 4: Bubba's Black Magic
JUDGE ONE: Black bean chili with almost no spice. Disappointing.
JUDGE TWO: Hint of lime in the black beans.
Good side dish. Not much of a chili.
FRANK: I felt something scraping across my tongue, but
was unable to taste it. Sally, the bar maid, was standing
behind me with fresh refills. She starting to

look HOT, just like this nuclear-waste I'm eating.

Chili # 5: Linda's Legal Lip Remover
JUDGE ONE: Meaty, strong chili. Cayenne peppers freshly ground.
JUDGE TWO: Chili using shredded beef; could use more tomato.
Must admit the cayenne peppers make a strong statement.
FRANK: My ears are ringing, and I can no longer focus my eyes.
I farted and four people behind me needed paramedics. The
contestant seemed offended when I told her that her chili had
given me brain damage. Sally saved herself some time by pouring
beer directly in my mouth from a pitcher. It really pisses me
off that the other judges asked me to stop screaming.
Screw those Texans.

Chili # 6: Vera's Very Vegetarian Variety
JUDGE ONE: Bold vegetarian chili. Good balance of spice and peppers.
JUDGE TWO: Aggressive use of peppers, onions, and garlic. Superb.
FRANK: My intestines are now a straight pipe filled with gaseous,
sulfuric flames. No one seems inclined to stand behind me except
that crazy Sally. I need to wipe my ass with a snow cone.

Chili # 7: Susan's Screaming Sensation Chili
JUDGE ONE: Mediocre chili with too much reliance on canned peppers.
JUDGE TWO: Ho Hum, tastes as if the chef literally threw in a can
of chili peppers at the last moment. I should note that I am
worried about Judge Number 3. He appears to be in a bit of
distress as he is cursing uncontrollably.
FRANK: You could put a freaking grenade in my mouth, pull the pin,
and I wouldn't feel a damn thing. I've lost the sight in one eye,
and the world sounds like it is made of rushing water. My shirt
is covered with chili which slid out of my mouth. My pants are full
of lava-like shit to match my shirt. At least during the autopsy
they'll know what killed me. I've decided to stop breathing, it's
too painful. Screw it, I'm not getting any oxygen anyway. If I
need air, I'll just suck it in through the gaping 4 inch hole
in my stomach.

Chili # 8: Helen's Mount Saint Chili
JUDGE ONE: A perfect ending, this is a nice blend chili.
Safe for all, not too bold but spicy enough to declare its
existence.
JUDGE TWO: This final entry is a good, balanced chili, neither mild
nor hot. Sorry to see that most of it was lost when Judge Three
passed out, fell and pulled the chili pot on top of himself.
Not sure if he's going make it. Poor Yank.
FRANK: --------------
(editor's note: Judge #3 was unable to report)

Actually, I do not believe one demented, homosexual posing as those he fantasizes about renders the entire group useless. Just because Dougie has this affinity for us and gay porn does not mean the entire group is bad. Judging by the email, everyone knows what to look for in shaky boy's diatribes and can tell the forgeries from originals. The one's who don't know what to look for, well, you can email me and I'll tell you. If you are not a regular in here, all I can say is, if it sounds malicious, has any references to gay, homo, porn, or vulgarity, chances are 99% it came from Dougie. If you're a newbie, just ask. No one will give you a hard time except for Dougie's aliases, but they don't count, and as usual, someone will put him in his place immediately.. He's still looking to find himself. He found himself once, but is having great deal difficulty accepting who he really is. It's called denial, and it ain't no river in Egypt.

Source record: 74844

The external antenna that you hooked up to the HH-35 must be tuned to the desired frequency
that you wish to T/X on.
Use a in-line SWR meter to adjust the antenna for lowest SWR on the desired frequency.
A reading below 1.5:1 must be obtained for decent reception,
Cheap coax and connectors will add to your reception woes, use RG8/X or RG58/AU coax
that is rated at 50ohms impedance.
Amphenol connectors are recommended at each end, the ground sheath and center conductor
must be soldered.
Keep in mind that youre H/H will never outperform a quality mobile unit such as: Cobra25 , 29
or 148LTD.
Avoid the Cobra Sound Tracker's like the plague.
You did'nt mention what kind of antenna you have mounted on trunk, is it grounded well to the
chassis of the vehicle.

Dwight, I am 96% sure that hams were involved in the design of this
project. [snip]
[snip] There back and Busch Jr. is in the white house - scary.
    Lets not make this a political issue, or divide ourselves by
trying to blame individual groups. Its not about Democrats or
Republicans (the research had to have started while Clinton was in the
White House, but I don't doubt Bush will love it).
    Instead, this is about everybody outside of the power elite,
and _ALL_ of us will have to live with this stuff in the future.
Dwight Stewart   (W5NET)
http://www.qsl.net/w5net

Dwight, you say we shouldn't make this a political issue, but that is
exactly what you did in the very next breath. I would hazard a guess
that research on this began way before Clinton's time in office. Clinton
drastically cut military spending, especially defense research. When a
project is completed and made public by the government, it has usually
been in the wings for quite a long time. And as someone else alluded,
this RF technology is not new..the microwave theory is dead on, and it
has been around alot longer than Clinton.

Except on eBay. Anyone attempting to deal in illegal equipment there should
take note that eBay has changed the system by which you contact other members.

No longer are you allowed to e-mail directly. You must send your message
through eBay's web site, and they will forward it. This means your e-mail can
be monitored by eBay. Something to consider...especially since the eBay member
agreement clearly states that they can and will share information with law
enforcement agencies, if necessary.

How many imitations were there of the old Starduster? Thinking back to the 70s, I remember seeing ads for several knockoffs. There was one that folded out and advertisted assembly in 60 seconds. Showed photos of a guy pulling it out and assembling it as the clock ticked away. I *think* it was made by Channel Master (?)

I am new to the world of CB radio... in fact, I just went to a local shop yesterday and chose the Uniden PC68LTW as the unit for my truck (was this a good choice)?

I also was thinking about buying a handheld CB to use for the times when I am not in my truck, but traveling. I have searched for resources on handheld units, but haven't had much luck finding anything.

Any suggestions or pointers would be appreciated (as well as links for where to get the best prices on the handheld units).

Thanks in advance,

Santa

Hello Too Many Radios:

Yes your dead nuts right on that one. I have the Channel Master Starduster Antenna, along with most of all the others.

The Channel Master Starduster is a much better designed antenna, they did this one right.
I wish I had the paper work for Channel Master on this one.

I have a old cheap forgin model that someone sent to me, with the vertical element insulator burned out, and had caut fire. I made a new insulator, and rebuilt the base assembly to be bullet proof, should have taken picture of it.

>solution, you are part of the problem.

Just for the record, I'm part of the solution. A small part, I admit. But make no mistake about my position: Unlicensed persons should remain below 28.0.

Other than that, I don't care what you do.

>You can lead a rabid, mangy, dog
>to water, but you sure as hell can't make him drink, eh Q?

I think it's horses you lead to water, if I remember my Famous Old Phrases. Perhaps you are thinking of not being able to teach old dogs new tricks. That certainly addresses the situation in rec.radio.cb.

Folks here are (1) convinced they can operate on ten meters if they wish; (2) convinced they can't get caught; (3) convinced that the level of enforcement will not change from what it has been in the past.

If someone wants to be an Old Dog, then he/she can learn the hard way. I'd prefer that they "wise up", but if they want it the hard way, I'm happy to accommodate.
Unfortunately, they drag down unsuspecting newcomers with them. And that's not beneficial for 11 Meters. We need good operators.

Under Communism, every freq. is illegal unless approved by the Govt. (plank #6--manifesto). The whole CB band is a freeband, and above and below is the so called "freeband." The Govt. doesn't want you to talk skip (over 150 miles or local), because it would giv e rise to Channel 6. Now there is Channel 10 & 28, and whether yo is Bro or Honkey, dems people likes to talk skip. I use to listen to the Very Colorful kip stations in the 60's & 70's, that rattled off their PO Boxes for QSL card exchange. Do they do PO Boxes any more?
Dave!!!!!!!!!!!!!!!!!

<jupiter1-no-spam@cotse.com> wrote in message news:983656009.3aa16649236e6@webmail.cotse.com...
There are no illegal frequencies, just illegal users. There are very few frequencies in the U.S. that do not require a license or permit to transmit on, and this is not one of them. Anyone transmitting on this frequency with out an FCC license or permit for this frequency is in violation of FCC regulations. There is no such thing as the 'freeband'. Any cb callsign is made up as the FCC no longer issues callsigns for cb. Congratulations on being a non-cber, better you never lower yourself to such a low standard.

inter1097@aol.com (Inter1097) posted:

I am a Shortwave Listener, I have recently found an intresting Frequency.
27.555 USB Which I found out is known as the International DXing Channel.

I want to know if this frequency is legal or not. I have heard some people say
its legal, some say not legal. One person claimed to have a CB Call sign that
was made up of initials and the 1st 2 digets of their zip code.

Hopefully I will find a straight answer here, hopefully not hehehe :)

Thanks for your help

Tony

I've been reading this group for a while now, after an absence of a couple of years. What I cannot believe is the mentality of a lot of the posters here. I mean really people, do you not have lives? What is this preoccupation with the gay lifestyle? The headers and IP addresses seem to come from just a few nut cases that, for whatever reason seem hellbent on harrassing others. I guess these posters cannot figure out that anyone with any PC intellect whatsoever can see these headers, and knows what fools they are. Then again, these posters are not posting from real ISPs, nor are they using real newsreaders.

I have children that are ages 9 and 13. They are brother and sister, and pick at each other relentlessly, but they still are intellectually far above some of inhabitants of this newsgroup.

Just my $.02 worth.

Re: The News Group

Group: rec.radio.cb Date: Sun, Mar 4, 2001, 5:52pm (EST+5) From:
qrm2000@aol.com (Qrm2000)
If you are not part of the
solution, you are part of the problem.
Just for the record, I'm part of the solution. A small part, I admit.
But make no mistake about my position: Unlicensed persons should remain
below 28.0.

"I agree. Unlicensed should stay below 28.0"

Other than that, I don't care what you do.
You can lead a rabid, mangy, dog
to water, but you sure as hell can't make him drink, eh Q?
I think it's horses you lead to water, if I remember my Famous Old
Phrases.

"It IS horses, if you are going by phrases. I used the word "dog" as in rabid and mangy, as in you, Q. You are NOT part of the solution, no matter how hard you want to believe. Incompetence in configuring your browser correctly for usenet (as in not knowing who the hell you are replying to), it brought to your attention, and your inability to comprehend or correct your deficiency, makes you part of the problem. You have no clue, as your past posts prove, who you respond to, and are unable to distinguish between such, so if you were truly part of ANY solution, you would keep your mouth shut until you learned who it was you were even speaking to, and how to fix your own screw ups instead of adding to the strife, no?.".

Perhaps you are thinking of not being able to teach old dogs new
tricks. That certainly addresses the situation in rec.radio.cb.

"Since you bring it up, how are you in any such way a solution to any problem in this room when you don't even know who you talk to? And just for the record, there is only one problem in this room, and he is only a problem for the folks such as you that can not read ip numbers and headers correctly. Seems like he has inadvertantly peed on the one or two cheerleaders he has.

Folks here are (1) convinced they can operate on ten meters

"Really? I think you're full of it. Name one person in here who says that. You just keep feeding that junk to yourselves to justify your BS you spew and your presence".

if they wish; (2) convinced they can't get caught; (3) convinced that the level of enforcement will not change from what it has been in the past.

"Again what the hell do you care what anyone believes? Why do others peoples beliefs fascinate you and Dougie to the point of infatuation?"

If someone wants to be an Old Dog, then he/she can learn the hard way. I'd prefer that they "wise up",

"Your preferences are irrelevant."

but if they want it the hard way, I'm happy to accommodate.
    Unfortunately, they drag down unsuspecting newcomers with them.

"Really? Again, I dare you to cite an example here. I can cite several where newbies came in, asked a radio related question, and Dougie hit them with his fag-shit. Care to defend that?"

And that's not beneficial for 11 Meters. We need good operators.

"Just in case you missed it, care to defend that act by Dougie, since he is so quick to put you, he and Sparky in the same group?"

I have been off of this newsgroup for a while too, and have since come back. Gone are the helpful, intellectual posts, nothing is what it was. At one time a person could have posted to this group asking how to rebuild a piece of equiptment, illegal or not. Then a hundred replys would have been sent and alot of knowledge would be tossed around. Now some one will be screaming about everything from not being type accepted, to someone that replied is a faggot simply because he knew what he was talking about. I simply feel that all of the trouble makers are the ones you used to hear on the air. They now took it to the net because they got there asses kicked, and all of their equiptment has since been smashed. Being that these dead-keyers, music- players, and on-air trouble makers lack the mentality to hold a real job they can not pay for new equiptment and that Maxon in their welfare wagon just doesn't get heard. The net provides them an anonymous name that they can use at their local library (remember they can't afford a computer or at home access), and also keep them from getting their asses kicked.The legitimate posters, helpful cb'ers, and otherwise dutiful people will all move on like we do on air. We will again find a place that is free off unintelligble idiots with nothing important to say. To all legit people I just have to say I pity your local towns if these people are infact still on-air, and I wish you luck.

Most every post of the gay lifestyle comes from one person. He posts
from numerous services and goes by different names and often uses
other posters identities for his flames The problem is not as wide
spread as you think. It has a single source. His name is Doug Adair.

What kind of anti American rock did you crawl out from
under ? This weapon is a NON lethal tactical weapon. I
suggest you put your sorry ass in a "peace keeping", or
"law enforcement" role that US military forces deployed
on in the past - and then when a hostile crowd (a crowd
including both military and civilians), is intent on
decaptitating your head and carrying it around on a pole,
you come back here and report how you shot and killed all
the women and children brandishing knives... or would you
rather hold your fire and give up your life - because you
have such moral ideals.

If my men are under fire by civilians, and if I have a non lethal force option to employ, i will use it, but, given the absence of one, escalating to lethal force is the last alternative.

Any professional soldier will tell you they do not wish to harm civilians, this is the impetus for this new technology. It is an effective deterrent, publicity not withstanding.

And before you shoot your socialist mouth off, I suggest you remember the incident in the streets of Mogadishu, Somalia back in 1993. Where the body of a US Army Ranger was being dragged naked thru the streets, an angry mob, including women and children - cheering at the sight. I suggest you read the book "Black Hawk Down".

People like you would prefer my comrades and I in arms, simply ask the enemy really nicely "oh would you please not hurt us?". While they cut our throats and spit on, and burn the American flag for the anti western crowds that have not so friendly intentions for the U.S.

This technology is another tool, another option for our commanders in the field to accomplish their missions. The ultimate tactical applications, and ROE's regarding the technology would no doubt have to be worked out, but having it is better than not having it.

See? He did it again. His spelling and punctuation is 1st grade level though, but if anyone still is having trouble here's a tip: if it's NOT from "news@mbx" it's FAKE...everyone knows I can use YNN too except Dougie....His fake babble about IP headers is hilarious. Go on Dougie, blubber! hahahahaaha!

411. Re: CB and Ham compatability Question?

Newsgroup: rec.radio.cb
Date: 2001-03-04 22:06:02 UTC
From: JAMES HAMPTON <j.r.hampton@worldnet.att.net>
Message-ID: <e%yo6.4568$UN5.289983@bgtnsc05-news.ops.worldnet.att.net>
Source record: 74886

Jay, an excellent post. All hams, please read his post and try not to let the 10 meter issue get in the way. Unfortunately, a lot of hams are guilty of the attitude that Jay talks about; not all, but a fairly large number. Years ago while on active duty in the Navy, I went to join the local amateur club. A few dour-faced individuals who handed me a list of their 'regs' to be memorized. On the way back to the barracks (after dumping said regulations in the nearest trash bin, I saw a sign that said simply '73' with an arrow pointing to the back of the building. I found a CB group - complete with a good mix of men and WOMEN - having a barbeque. They welcomed me. Guess which club I joined (yes, I had my extra class ticket back then). The CBers were a fun group and I became active in CB for a couple of years after I got out in the early '70s. Again, try not to let a few problems cloud your judgement as we (hams) also have a few problem individuals. What are we trying to do? Correct problems or are we simply trying to flame the newsgroup? You will not likely change much, only irritate a lot of folks - especially with some of the URLs being posted and you know what I mean. By the way, anyone read the headlines the other day - seems that Congress feels the FCC overstepped its' bounds with the cable regulations? So what does the FCC do now? Sure, change may come with a lot of complaints, but what good does it do to flame a lot of folks when perhaps only a small minority are doing what you disagree with? I doubt what has been posted has done any good - and I believe you have probably caused a lot of folks to AVOID amateur radio. Then again, perhaps you don't want competition during the contests? At least, if you must disagree, why put up posts boardering on obscenity? Just my two pennies' worth.

Thanks for reading and 73 from Rochester, NY

Jim (AA2QA)

Yore CobraST may rock, but the ST feature has nothing to do with it.
The benefits of the Sound Tracker system can only be realized when
communicating with
another CobraST that has the ST feature activated.
It is totally useless for any other purpose whatsoever, that is why i avoid
them like the plague.
It was a great marketing strategy for Cobra using the "ST" feature to sell
radios,what they failed
to tell you and the general public was it's intended purpose.
I suggest that everyone you talk to should buy a "ST" so you can all reap
the benefits of
Cobra's breakthrough technology.
I like the 25,29LTD and the 148GTL but i wont own a "ST".

Hi,

I have just purchased myself a Uniden 510XL with a Larsen NMO-27 antenna for recreational use while 4x4ing out in the country.

On the S/RF meter of the Uniden it shows that my receiving strength is 2 (and going up to 3 when someone talks). Does this sound right, should the receive strength be stronger across all channels?

Finally, where can I locate the FAQ for this newsgroup?

Thanks so much,

Andrew.

>>Do they do PO Boxes any more?<<
Yes but since the Clintonnasses a PO Box not protected against federal
crime investigations.
They or the local bubba sheriff will go to the post office with an order,
open up you PO Box, and use whats inside against you.
Then you are guilty till proven innocent and find out no lawyer will even
"look" at your case for under $ 100.000.00 in advance.

Greetings!

Your situation with bleedover. Thats what I'm concerned about.
Bleedover is a sure sign that things are not equal.

What kind of coax and how many "breakpoints" do you have in the coax?

One of the better methods thats simple, for me anyways, is making a
grounded breakpoint outside the house, and an internal counterpoise
for the radio thats inside.

If you have a lot of breaks in the coax, for disconnecting this and
that e&c, are any of them outside? Are the connections old, some may
have got water entry causing problems.

Here's what I've done in my situation that seems to help, the original
concept was to making a mounting location separate from the antenna
mast where I could disconnect the coax from the antenna at ground
level when local weather got severe. Mostly for lightning issues, I
didn't want it going into the house if it could be avoided.

I also didn't want to "patch cord" my radio to death. I simply got 100
feet of coax, and made only one break, for the purpose of grounding
the station away and outside the home.

I used hard, thick wall, 1-inch EMT conduit, a good 10 foot section,
and pounded it into the ground with two feet sticking above the
ground. At this point, I took some rock salt left over from winter
de-icing, and poured this into the conduit and poured water over that
and allowed it to soak in.

I fashioned a break point using a barrel connector and the PL-259
plugs and purposely made a ground connection separate from the mast
that I use to hold the antenna. Separation is about 12 feet on the
ground, from the antenna. I use a stainless steel band pipe clamp and
drilled some holes to fit the band into the conduit. The band is
narrow enough to fit thru the holes and allow the barrel connector a
means to hold it to the conduit for grounding and physical/mechanical
connection making it easier to disconnect the coax when I'm in a
hurry.

Bleedover can arrive from different sources. Have you tried testing
and using the following?

Using old coax, a section of 8 feet with one end soldering the shield
and center conductor to a tines lug, and bolt this to the radios case
to act as an internal counterpoise for the radio and improve

shielding.

I went a few steps further, to increase enjoyment and keep stuff
together...

Shielding was also accomplished by making up a rack mount using metal
brackets instead of wood. Bolted together with metal flat-stock acting
as straps going across where the "feet" of the audio components and
the CB radio would use, and bolted these to the flat stock then to the
rack itself.

I've installed the Stereo, EQ, Tape deck and the radio on the same
rack, with no problems of interference. The counterpoise also helps in
reducing "hums" that the entire rack mount might want to inject into
the radios case.

But, for further emphasis, a check of the external ground at the
antenna to household ground is also in order.

Using a DVM, measure ohmic resistance to the ground at the household
outlet, and the shield of the coax - the ohmic resistance needs to be
less than 4 ohms, with less than 1 ohm ideal. This is a DC check, any
extra ohmic value, at RF frequencies, and you could be bleeding into a
lot more stuff you don't know about.

If you don't get these readings, some investment into station
grounding and household grounding needs to be done. The station may
have a better ground than the house. This poses an electrical hazard
where neutral or ground wiring may use your stations ground to
dissipate currents. Check local regs first, but if it's anything like
what I've experienced when I moved to this current location, the
sooner it's fixed, the better off you are in safety issues too.

On Fri, 02 Mar 2001 22:50:39 GMT, while the modem was ice fishing with
the Mouse, "MC Turner" <C_Turner@ix.netcom.com> dissertated the
following:

:+> I got some great info that confirms my suspicion of the radiation of RF off
:+> my Tower and mast.
:+>
:+> Do to the fact that my tower is free standing its a real mother^&*^* to work
:+> on the antenna. It was a miracle to get this Sigma up there. I am not up to
:+> the task of trying to decouple the antenna from this tower. I fear that once
:+> I do this I will have to retune the radiator. For that to happen I would
:+> need a Cherry picker with at least a 70ft boom. In other words its not
:+> worth it to me. Jay is right about the Sigma and it not lasting. My Sigma is
:+> 3 years old and its leaning badly.
:+>
:+> SO... I am going to put another antenna up. I need some advice from you guys
:+> on my options. I would like your opinions good and bad.
:+>
:+> FYI: I have a 45 ft free standing Rohn tower. 10 ft mast pipe. I have 8257
:+> Belden 8u but will be putting going to LMR 400 or LMR 600 with the new

:+> antenna.
:+>
:+> I have sent mail to Jay asking about his antenna's. I have not recieved a
:+> reply at this time. I am sure he will get around to it :) Until then my
:+> other choices are:
:+>
:+> (ABS 1600). No tune.. That means I put it up once on that tower. Its light
:+> and I could afford to put an additional 5-10 feet of pipe up. No counter
:+> poise? Will it bleed?
:+>
:+> (Spectrum 1600) I have heard good things from people. 5/8th wave with
:+> Counter poise. Friend ordered one to replace his Sigma. Should have it up
:+> within a week. His Sigma bleeds bad as well. Throughts on Spectrum?
:+>
:+> Thats all I could come up with. If you have another choice to offer please
:+> post it. The Sigma is leaps and bounds better than my A99 in performance. I
:+> am very happy with the performance of the Sigma but it does bleed and its a
:+> weak design. I would like something that is less opt to bleed and something
:+> that will at least = the Sigma in performance. Both of the antenna's above
:+> can be raised an additional 5-10 ft. From the ground to the tip of the sigma
:+> is 82 ft. With a 20ft antenna the tip will be about 70 ft. I could go that
:+> additional 10 ft and get to 80. Will performance come close to this Sigma?
:+>
:+>
:+> Sorry for the long post again. I want to make a educated choice.
:+>
:+>
:+> MC

Greetings!

Get to where you can be next to someone else on the same channel and
have them key up - you should get 4 lights. If not, someone either
de-tuned the radio, or you should think about replacing/relocating the
antenna.

rec.radio.cb FAQ can be located here...

http://www.iserv.net/~codyspc/cbfaq.htm

432. 4-pill HELP!!!

Newsgroup: rec.radio.cb
Date: 2001-03-05 00:08:29 UTC
From: hankjr941@aol.com
Message-ID: <20010304190829.16527.00000525@ng-mb1.aol.com>
Source record: 74905

My friend has a 4-pill box in his truck.It has 4 mrf492,s in it, I put the box on two meters and both are showing 250 to 300 watts. the truck its in has two batteries
and a 130 amp alt, He is driving it with 10 watts and the swr is 1-3. My first question is how much should this box do with these pills in it, and also what would it take to put 2879s in it? Any help would be great! thanks Juke
Box 223

oh yeah, with the truck running im measuring 14.3 volts at the box,and if we put more than 10 watts in, it does no more! the wire is plenty big to.

Yo mean there is a NEW one out NOW, or is he talking about the Italian ones that were out 10 years ago, that were MORE rugged than the 70's ones? You know the ones from AS or Finco, which have a BAD design weak point of the veritcal radial that comes out of the hub, @ the hub? I have a NOS finco in the box left and some Italians!
Dave!

We are assuming that you tuned the antenna for minimum SWR on the channel
that you are
trying to receive on.
SWR higher than 1.5:1 will greatly affect reception as well as transmission.
Go here http://www.firestik.com , read thru the the tech help articles but
ignore what they say
about using 18ft. minimum lengths of coax.
Me , Handy Andy & The Group have already hashed that one out.
Coax length does'nt matter if the antenna is tuned correctly, but were not
going to try and convince
"Firestik" of that fact.
Otherwise they have some good tech help including a article titled "Things
every CB'r should know".

Nice job yourself, Jim.

The amateur radio hobby has been characterized by two mean tendencies over my 45 years of involvement (and I'm all of 57): Unbelievable seabag lawyering and the male tendency to try to establish pecking orders I first observed when my son made it to age 4 or so.

There are those who read Part 97 like some read the Bible or the Constitution -- usually with about as much accuracy. They are a major pain to everyone including the FCC. The 'seabag lawyer' phrase comes from an FCC guy I had some dealings with in my broadcast days. This tends to decrease with age and wisdom. Our legal-eagles here I am sure are viewed as pains in the drains at the Enforcement Bureau just as they are here.

Pecking orders come in several flavors. I will make no bones here that I do not consider a Codeless Tech to be a full-fledged member of the fraternity and in fact I refused to administer them as a VE (pointless really, we had a number of Advanced VEs ready to do most anything). This is not because of the codeless feature (I will support codeless tickets if anyone asks) but because the license was designed to let a ham's wife fire up the repeater and tell him to bring home bread and milk. Yes, there are a few - damned few - doing neat things but these we can handle separately. It simply is not an entry-level ticket but a membership card in the Auxiliary.

I am not alone in this thought however unfair it might be. So I have no doubt that a few come back to CB with an attitude and we have seen that as well. As it was a pecking-order game that got them started, running into a real one is unfortunate but not a cause for much concern. They are not representative of -- or representatives of -- the HF amateur community.

The amateur radio hobby had -- it is decreasing fast -- a reverence for seniority. When I got started the callsigns were issued almost universally in sequence. I had let my tickets lapse during the Nam Era and as a daddy and homeowner and a neighbor of a gung-ho freebander (I hope no one thinks it is anything new) went down and took the Advanced in one sitting and got a new WB&#65533; callsign. In the process of joining the clubs etc. the inevitable happened and I got a bit tired of being patted on the head and called Sonny. When my old early K&#65533; came in the mail, I vaulted to second on the sequential list and was damned near run out of the club on a rail. So yes, I do have a fair inkling of what the newbie goes thru -- did it twice myself. I try not to pass the tradition on but as Jim notes, there are those who do.

My illustrious neighbor bought a Sillytronics and laying my license upon him proceeded to work about 12 countries in two hours in miserable propagation on 10 meters. So I offered to coach him. The next week I had

about 9 guys in my basement and a teaching career began. I probably have something over a dozen licensees from 27 that I have Elmered and several long-term friends. They don't need me to lecture on the error of their ways.

To support Jim's point (and spare the world any more war stories), of the hams in the group, you will generally find you get more understanding, as well as calmnity and dignitude, from hams who are older, hold the Extra, and have done some non-hobby things in radio. Probably means we have broken a few rules along the way, too.

Dick NBK

>was being dragged naked thru the streets, an angry mob,
>including women and children - cheering at the sight. I
>suggest you read the book "Black Hawk Down".

I would suggest that you look at the history of modern warfare before
you shoot your mouth off about the desires of the "professional
soldier). Try looking at how many civilians were killed at the
bombings in Germany. Try looking at the collateral damage from our
effective use of nuclear weapons in modern warfare. Were any
civilians killed in the bombing of Iraq? How about Bosnia? We never
killed civilians in Vietnam.

What happened to the soldiers in the Blackhawk was the result of
failed foreign policy and piss poor tactical planning. Cooking every
person within 700 yards would have made the outcome much different.
>
>People like you would prefer my comrades and I in arms,
>simply ask the enemy really nicely "oh would you please
>not hurt us?". While they cut our throats and spit on,
>and burn the American flag for the anti western crowds
>that have not so friendly intentions for the U.S.

>commanders in the field to accomplish their missions.
>The ultimate tactical applications, and ROE's regarding
>the technology would no doubt have to be worked out, but
>having it is better than not having it.

The option of cooking your enemies is another option available to the field commander. Plus, who says that is the only way that the technology can be deployed? Could a bigger one be put aboard a plane? Cook the people and keep the property.

Much better than a neutron bomb. Of course, the military never thought about that because they stay up all night worrying about hurting civilians....yeah right. Plus, do you really think that the only ones to use this technology will be the US military?

Are you that naive?

Everytime I check the FCC busted list I notice maybe one cb'er and a bunch of Hams busted for mostly trying to use repeaters they should't and just being ignorant.
Also if you check out the Ham groups you do not see cb'ers harrasing and using foul launguage.
We should all pat ourselves on the back.. The cb comunity including freebanders and the "big radio" guys are a class act and true gentleman.
Everytime I see foul launguage in this newsgroup the poster has his Ham callsighn at the end. When the post is erudite and eschews off-color remarks it's usually from a cb'er or freebander type. Thats probably why the FCC doesn't mind when we use 10 meters, they know we bring some class to the band.

Well, thats nice rhetoric, Mr. Professional Soldier, but that nonsense is not fooling me. I'm fully aware of the military training scenarios featuring American citizens as the target (so-called terrorist groups - often conservative right-wing groups defined as "terrorist" groups). As any truthful professional soldier will tell you, this type of training has become commonplace within the military over the last few years.

And this mission (control of "terrorist" groups in the US) is certainly one of the primary factors driving the development of "crowd control" weapons in the military.

As for the "non-lethal" nonsense, let me remind you that just about everytime the military has been used for "law enforcement," the situation has become lethal.

Now you want to hand soldiers (and eventually police departments) a weapon touted as "non-lethal" if used correctly, when those very soldiers have shown that they cannot be trusted to use a gun correctly in those situations (remember, thats why the military does not give bullets to soldiers on guard duty).

Somehow, your claim that this is "non-lethal" technology does not really comfort me that much.

> If my men are under fire by civilians,
> and if I have a non lethal force option

> to employ, i will use it, but, given

> is the impetus for this new technology.
> It is an effective deterrent, publicity
> not withstanding.

Ah, judging from the first paragraph directly above, I see you're also aware of the military training scenarios featuring so-called "terrorist" groups as the target (or at least aware of the mentality behind that training).

Anyway, the two paragraphs above don't add up when taken together. If "your men" are under fire, are you going to sit around waiting for this V-MADS weapon to be deployed? Of course not. You're going to shoot first and let God sort out the dead afterwards. So obviously, protection of civilians is not the real impetus for this new technology like you claimed in the second paragraph. Instead, this technology is obviously designed to control non-violent crowds (crowds that pose no lethal threat to your soldiers).

> And before you shoot your socialist
> mouth off, I suggest you remember

> women and children - cheering at
> the sight. I suggest you read the
> book "Black Hawk Down".

V-MADS technology would not have made any difference in Somalia, my friend. Thanks to the overly aggressive tactics used, our soldiers succeeded in turning the entire population of that country against us in just a matter of days (even groups that initially supported our involvement). V-MADS technology would not have changed that at all.

Even that specific incident (the crowd dragging the soldier) would not have changed with V-MADS technology. Since that incident was totally unexpected, V-MADS technology would not have been immediately available to use. By the time it would have reached the location, the incident would have been over.

> People like you would prefer my
> comrades and I in arms, simply ask
> the enemy really nicely "oh would
> you please not hurt us?". While
> they cut our throats and spit on,

> and burn the American flag for
> the anti western crowds that have
> not so friendly intentions for
> the U.S.

Don't give me that "comrades in arms" fighting the enemy nonsense, because it just doesn't fly. This technology, as advertised, is not about fighting the enemy . This weapon is being advertised as a crowd control tool. And, as far as I know, the military has not yet defined non-violent crowds as the enemy (yes, since you've already said you would use conventional weapons against violent crowds that threatened your soldiers, we are talking about non-violent crowds).

And, if you're fighting an enemy, you're not going to use weapons like this in a non-lethal manner. If this type of weapon is used at all, it will be used to kill the enemy. As such, it becomes nothing more than another weapon to kill with (so drop the high moral facade, my friend).

And, finally, I strongly object to your attempts to paint me as anti-American or anti-military. Throughout this entire discussion, my comments have been solely directed at the use of this technology as a crowd control tool. Not once have I commented on the use of this technology against a real enemy in a warfare situation.

Furthermore, I don't see how one can be painted as anti-American because of opposition to a weapon anyway. The United States has huge chemical weapons stockpiles. Is it anti-American to be opposed to chemical weapons? What about biological weapons (we have a stockpile of those also)? What other weapon must I not object to if I want to avoid being called anti-American?

Agreed. In fact, they let the cat out of the bag with the press release (its based on RF). Since we're talking about radio here, it should not be that difficult to figure out - almost anybody familiar with radio could come up with the frequency used with little experimenting and the equipment should certainly not be that difficult to build. Somehow, I suspect we're seeing the beginnings of a whole new arms race.

I have seen CB radios that say they have 240 channels using International configuration FM/AM/SSB e.g. 'President George' (http://members.tripod.com/~Malzev/cb-radio/george.htm)

I am confused how these radios relate to the 40 channels CEPT frequencies, can any help please?

Thanks.
Peter

The interesting thing is that pretty much anyone can build this thing --
and, if the government is claiming that it's NOT a dangerous weapon,
then if the intended victims "do unto others before they are done unto,"
there isn't a lot of room for the Feds to complain, is there?

Wouldn't you love to be in THAT courtroom?

ATTY: "Officer, you testified that the defendant was using a Scrooch
Gun on you. Yet we have heard testimony that the defendant had an
Amateur Radio license, and was transmitting at legal power and frequency
. . ."

Fair enough, Q. But when Dougie is in full drag attempting to forge those he wants to get close to, it wouldn't hurt for you to say so, since you voiced concerns about newbies, why let them believe you are addressing someone you aren't, IF you are as concerned as you say you are about what newbies perceive? Since DOugie can't for the life of him see what we see in the way of headers when he attempts a poor forgery (he already thinks all mail from YNN have the same #'s, he said so,) and we hysterically are aware that his browser does not display such info in the manner that others do (or is it just his ignorance?), isn't it safe to say that maybe one or two newbies have the same problem as he does? In other words, he can't see it, so he doesn't think anyone else can, therefore his forged posts look original to only him?

Ok! I appreciate the kudos and warm fuzzies and whatever else. Damn. Never knew there were that many sandbaggers here.
At a glance, so you don't have to wonder, another chink in SBD's game, is what times they are posted. I went to YNN and viewed the ng. If anyone STILL must question the validity of a post, go to YNN and view the ng. Note the time zones (EST, GMT) that are posted along with the post itself. :)) One last slap before I'm done with kickin' yer teeth in this month DOugie! All mine are in EST. All the forgeries from SBD are in GMT, and that, my friends he cannot change. Some browsers display the differences automatically (like the #s), some don't. This also can be compared to his other forgeries of other nics he uses. And with that, I am done replying to SBD's foolishness or talking about him...at least until next month, unless I need a chuckle. If you few (you know who you are) can't tell the difference, you don't deserve to.
Waving to Toledo :)

My first encounter with broadcast hardware was a Gates 5000 5kw FM transmitter about 1961. The station was in the process of going broke as FM stations in general were at the time and in fact the transmitter was later repossessed.

We were in the penthouse of a 36 story office building shared with another station in a similar predicament. As you well remember, the rules specified a minimum number of spare tubes and 4CX5000s ain't cheap. The Commission did their thing on the two of us alternately so that the Chief could crawl over the chicken wire separating the two stations and move our shared spare to the 'proper' side. The people out of the Kansas City office were first-rate to a man.

Dick

487. FS: Icom R71A Formerly Tom Sevarts JUNK!

Newsgroup: rec.radio.cb

Hi
Obviously Tom Sevart is not going to make good on this JUNK Icom R71A
he sold me for 400.00 stating it was an excellent radio, which is a
parts radio. It comes with Remote Control and has FM in it, if that
means anything.
I'm forced to sell it as a parts radio, because it doesn't work.
So, being an honest person, thats how I have to sell it.
As is, parts only.
Please make an offer. Again be aware of Tom Sevart N2UHC
Here was a copy of his ad.
I have an R71A for sale in excellent condition. Coverage is 100 KHZ -
30
MHZ AM/FM/USB/LSB/CW/RTTY. 32 memory channels. Optional FM board
installed
& remote control included. Owner is a non-smoker. I am asking $400
firm.
The receiver can be seen at http://photos.yahoo.com by clicking on
"Radio
Pics." I want to sell this receiver so I can buy an R75. If
interested,
contact me at n2uhc@yahoo.com.

Ah, nothing like 'creative thinking', right? I remember I was working as an applications engineer for UHF television repeaters in the early 70s. We had a pretty big potential deal cooking and the other applications engineer and I went out with the client. During dinner, he remarked that we would bid the job as specified, but it sure would be nice to ensure a strong signal so heavy rain and snow wouldn't affect it. I didn't say anything but did ask him later why he felt that was necessary since the signal specified was good engineering practice. Well, it turns out that our competitor on the bid made a 100 watt translator and a kilowatt translator (as did we). However, we needed a high gain antenna (read BUCK$) to achieve the desired signal with the 100 watt translator. Of course, one could use the kilowatt rig with a lower gain antenna, but that was much more expensive. Sure enough, the customer changed the spec by 3 dB, and guess what? We just happened to manufacture a 250 watt rig while our competitor did not. We simply substituted the 250 watt rig while he was stuck supplying a 1000 watt unit. Guess whose bid was lowest?

73 from Rochester (land of the snow today!)

Re: Ok Twistie, try this...

Twistie, your idiocy and obsession are showing!
as far as accusing me of any threats or other things on the NG, who cares?
1> You cant shut me up
2> If you complain enough, the guilty will be caught and I will still be here. I dont hide sonny...I get you all riled up, just like this letter you sent to my ARRL.net address, which I post below.
3> I dont give a rats ass who you complain to. Write your congressman if you want. Whoopie!
4> You obviously have some image that you are important in my life....not. The only time anything you say matters beyond a fart in a windstorm is when you post something like that dead fish in the mail story, then it just cracks me up.
5> Toledo is 100 miles from Cleveland. I am curious to know the date the package was mailed, as I know I have not been anywhere near Cleveland since November. I really dont care what you post or to whom. Bitch and moan all you want, cuz it is damn funny to me. Not only is it funny, it provides endless amusement for me and for whoever did mail you that fish.
6> Hero of the newsgroup? HAHAHHAAH! Be the hero then. I am innocent and you are paranoidally deluded. I dont give 2 shits.
You are only the "hero" of sociopathic crimials. If that's your ambition go for it.

SUMMARY:<SINCE I KNOW YOU ARE HAVING A HEADACHE AT THE PROSPECT OF HAVING TO READ THE BIGGER WORDS>
1.Fuck you too!
2.Go back to posting as 1mangayboy, when ya did that it was funnier.
3.Fuck you too!
4.HAHHAHAHAAHH!
5.Fuck you too!

HARDEE HARRR HARR HARRR...LIFE IS GOOD WHEN YOU ARE NOT AN ILLEGAL FAGGOT KEYCLOWN LIKE TWISTIE FAG IS.

Group: rec.radio.cb Date: Sun, Mar 4, 2001, 2:45am (EST+5) From: twistedhed@webtv.net (<twistedhed@webtv.net>)
I've had this addy on YNN for MONTHS you laxative licking buffoon You just discovered YNN Dougie? What a LOSER ahahhahahqah!What took you so long? You're a newbie who can't spell or get rid of the < > when he forges, and that makes you a DOPE Dougie. A DOPE with NO credibility. HAHAHAHAHAHAHA! Don't that suck? So send me more dead fish and be sure to keep the OHIO postmark on it like you did last time you LOSER! I'm going to put something in the mail for you soon that you'll REALLY enjoy you fecal spewing moron.

My turn! Sent to infragard@FBI.gov
Just in case you don't know...that addy is in Cleveland, you punk fuck!

Sirs: The above was posted to usenet group rec.radio.cb in an attempted forgery of my internet nic and address. This individual, who I believe to be one Douglas Adair, of Toledo, Ohio, has also been posting pornographic filth to the ng and claiming participants of the newsgroups to be subjects of said pornographic material. Much of what he has done in the past has been taken with a grain of salt. However, it is clear that he has become intent on doing malicious, and possibly physical damage to participants by repeatedly forging nics, domain addresses, and threats of a more serious nature. Due to the threatening nature and tones of his more recent posts, I believe he has conspired to carry out personal vendettas and intentional character malignments, and possible violent acts upon the group. This is not the first time he has threatened a participant in usenet, as it has always been of the usual mundane nature....IE: "I'll kick your ass". His more recent threats, however, have to be taken on a more serous level. At present, there exist twelve participants in the ng, willing to sign sworn affidavits attesting to verbal attacks, forgeries, pornography, and threats posted by Mr. Adair on the ng. We conveniently also have all of his threats compiled in chronographical order as well, which you will find attached and dated. I believe this message to be of particular interest above all others, due his threat of utilizing the US Mail, and obvious growing frustration and hostility so clearly directed towards me and demonstrated in his posts. The intent on his behalf, clearly is not for me to decide. If any other information is necessary, please do not hesitate to contact me at the number below.

Thank You,

John M. Gyer
PO BOX 1418

Yes I have read this before, you once posted it.

> What are we trying to do? Correct problems or are we simply
> trying to flame the newsgroup?

Call it what you will, but some of the goof ball, snotty, and just plan
unfriendly responses, should get a little feedback, don't you think. I do.

> You will not likely change much, only
> irritate a lot of folks

I think you need to stand up for self at times. Ok so not all the unfriendly
will change, and I do hope I irritate a few back, you betcha! But how many new
to radio CB'ers are going to flock to ham radio with all the unfriendly press, a
real shame.

> - especially with some of the URLs being posted and
> you know what I mean. By the way, anyone read the headlines the other day -
> seems that Congress feels the FCC overstepped its' bounds with the cable
> regulations? So what does the FCC do now?

Now your mixing apples with oranges

> Sure, change may come with a lot
> of complaints, but what good does it do to flame a lot of folks when perhaps

> only a small minority are doing what you disagree with?

I didn't originate the flame, only returned the fire. I think you allowed to do that. Besides who side ya on any way, do you think that ham radio will grow with the terrible press and reputation it has, as being unfriendly and stuck up?

> I doubt what has
> been posted has done any good

I disagree. You should read some of my e-mails. Slide on over next time your in the Mojave Desert.

> - and I believe you have probably caused a lot
> of folks to AVOID amateur radio.

Nope if anything I have helped the ranks to grow. I have said how great the ham radio hobby is, while the others flame, insult, and be snotty. Got quit a few locals to join us on the local us on the local 2 meter simplex channel.

> Then again, perhaps you don't want
> competition during the contests? At least, if you must disagree, why put up
> posts boardering on obscenity? Just my two pennies' worth.
>

Competition during contests, no I don't think so. You won't hear me out there doing that. Ok if you like to, ah. Obscenity, again no. Obscenity is the porno that someone with call letters is posting. My response uses colorful words to help you understand my point. Big difference. I don't see you bad mouthing the guy with the porno posts, so perhaps your a little biased?

I assign guys like you to mederocker jobs, and won't allow these type of guys to disrupt the production flow of the real workers, or upset the crews moral.

That is a good price for a 2950, get the RCI not the Mirage.
Mine is highly modified and i would not take less than $250. for it.
I would never sell it anyway because i feel it is the best radio you can own
and i get compliments
every time i key the mic.
If you can get to Shrewsbury,Mass. there is a 2970 for sale at the CB shop
behind the Total T/S
for $300. It is used but bone-stock and unmodified.....

Message-id: <3aa6d716.18171354@news.earthlink.net>

Hi
Obviously Tom Sevart is not going to make good on this JUNK Icom R71A
he sold me for 400.00 stating it was an excellent radio, which is a
parts radio. It comes with Remote Control and has FM in it, if that
means anything.
I'm forced to sell it as a parts radio, because it doesn't work.
So, being an honest person, thats how I have to sell it.
As is, parts only.

Have you tried contacting ICOM for a repair estimate, or do you simply feel you
dont wish to spend any more money on a bad deal that some CREEP did to you?
Just thinking the radio MIGHT be repairable....just a thought....

Okay ,but a longer antenna will lower the resonant frequency.
I could see hitting 10,11 and 12meters using a matcher but reception on
40meters
will suffer greatly. A matcher only fools the radio with a 50ohm load via
adjustable
capacitive/inductive circuit. It wont change the resonant frequency of your
antenna.

I just love cyber cops! Here's a new concept for you, " MIND YOUR
OWN BUSINESS". Seems to me you have way too much time on your hands
Punisher. Why don't you get a job and get out the house more often? There's
a whole world of things to do besides patrolling Ebay for export radios and
amps for sale. I'm sure even the FCC is tired of hearing your babble.
The FCC is terribly under funded and short handed to be worried about a
truck drivers export radio with a kicker. They have their hands full
monitoring commercial radio stations for the occasional cuss that Howard
Stern may let slip by.
In short, GET A LIFE!!!!!!!!!!!!!!

The extra inches won't help much but you can buy extensions
to install under the whip. Hustler makes them and the Texas
Bugcatcher guy makes them.

The RS fiberglas whips were designed for 5 watts and the center
wire is very small. I don't know if it will take 100w or not.

Use the stainless. Power handling will be assured. Get the 102 inch and a
spring mount.

its funny because many media outlets took some very good shots of this unit on video. one could simply measure the waveguide and resonance chamber and easily figure out the frequency. of course, the right amount of power is another issue, but 20 rats and an assortment of different gain dishes would fix that problem. the $50 million? inflated salaries for the last ten years..any good geek could do it under $10k easy.

new charges for NTL line £8.50 additional line £7.50
All line rental discounts currently applied to your account will be removed
from this date 1st april 2001

call connection charge will increase from 3.5p to 4.9p.

i wounder what offtel will say as this is a increas off nearley 50%
i think they will make all the excuses under the sun not to say anything to
NTL. If people complain to your MP to put pressure on offtel to act maybe
something can be done.

It would probably help this discussion if cf told us what he had in mind. Somewhere I have the feeling that he got onto one of those mobile base coils that adjusts all over creation. They did indeed use 108" whips, pretty standard in the pre-CB days.

My guess is that 102 would be equally inefficient.

This happened about 5 years ago, in suburban philadelphia. The person accused, did not have the money to afford a lawyer, which is why, I'm sure, that he lost. But the fact of the matter is that it does not take a prosecution along illegal radio operation's grounds, to take people to court over interference. Disturbing the peace, public indecency (In the case of "foul" language) are some of the more creative ways to get at the source of your interference.

Had it been me, the fact that I hold a ham license, and that I would have had some counsel representing me, would have most likely have resulted in the charges being dropped (That and the fact that I don't use foul language over the radio to be taped). But other people aren't so lucky.

And of course, nothing was mentioned about the effects if the potential
"victim" were wearing a suit made with metallic fibers. Metal reflects
or shields RF, so a prepared adversary would most likely be immune to
```

the effects.

>JAMES HAMPTON wrote:
>
>> Jay, an excellent post. All hams, please read his post and try not to let
>> the 10 meter issue get in the way.

Unfortunately, the 10 Meter issue IS in the way. Had you let AA2QA's comments (about friendly/unfriendly people) stand alone, that would have been better. All of society could benefit from a course in social skills. Unfortunately, Jim ran into one or more sourpuss hams on a military base. (sigh). We have tried for years to make Interpersonal Skills part of the amateur exam. Now, maybe the FCC and ARRL will listen! (Yes, this is sarcasm).

Don't mix friendliness and the 10 meter issue. Social skills are unregulated. The use of 10 meters, on the other hand, is regulated.

And this may shock you, Hampton. The fellows at the base MAY NOT HAVE BEEN HAMS. Huh? That's right. Even Jim may not have realized this, but there is a lot of ham equipment at military installations being used on MARS frequencies. The legality here is not being discussed. But take it from somebody who has been to a lot of Navy bases (including the years Jim was in the service). Many of the folks running radios on HF were/are not hams. But even if they had a ham license, this is more of a reflection on the US Navy than on ham radio.

> A few dour-faced individuals who handed me a list of their 'regs' to
>> be memorized. On the way back to the barracks (after dumping said
>> regulations in the nearest trash bin, I saw a sign that said simply '73'
>> with an arrow pointing to the back of the building. I found a CB group -

All we have here, folks, is the ranting of someone who dislikes "regs". OF COURSE THERE WERE NO REGS AT THE CB GROUP--DUH! If you want to operate on the ham bands, there are regs. If you operate on 11 Meters, there are no regs. There's no test. That's why many folks remain on 11 Meters and don't care to obtain an Amateur ticket. That's okay. What's the big deal?

(I wonder how AA2QA reacted when he found out there is a "reg" that he would have to pass a test to get a "speed key license" in order to use a bug or keyer on Navy radio circuits?)

As for the FCC and the cable TV issue, Mojave Jay was right on target when he said this is mixing apples and oranges. Communications is big. One should not take an event from one area and try to paste it onto another. It is that kind of thinking that keeps the water muddied in this NG.

For example, whenever the matter of 10 meters comes up, somebody screams about his right to run an amp on 11 meters. Sheesh. Are we THAT unable to stay focused? Where are those Ritalin pills when we need them?

Q, who do you continue to refer to when you keep saying, "somebody"?
Who is this "somebody" that talks of the right to use an amp on eleven?
Who is the "somebody" that says they have a right to talk on ten meters
without a ticket? I have perused the threads over and over and still see
nothing of the sort. Could you be a little more specific and add some
clarification?

Ahhhh, good 'ol Philly. Probably took place in Kensington or Germantown..south Philly could care less about anything. Perfect example of, "Don't do the crime if you can't do the time". Even a license would not exempt a ham from those charges if he was using profanity that was interfering.....indecency laws are tough as nails to enforce if you have an attorney, especially where speech is concerned, but geography definitely comes into play. Too many variables to predict what will happen in any given case.

Ditto that--102" stainless whip and 6" spring on a ball gives the 108" you are looking for. I have this setup mounted on top of a Suburban and hits a lot of stuff at speed--low wires, limbs, traffic lights and bridges. Hit scrapes the roofs at gas stations and banks. The whip is just very slightly bent near the top. Fiberglass will not hold up to this abuse. I use an Icom AH-4 antenna coupler that tunes 40 to 6 meters with this whip. Be advised there are much better antenna systems out there, but they WILL NOT take the abuse that a stainless whip and spring will. Even my SGC whip antenna will not take this abuse and that is why I mount that on the left side of the vehicle (center of the road has less over head obstructions) and about 2 feet lower than the stainless whip. The SGC antenna performs better, but I will swap it out and put the stainless whip on if I am going to seriously abuse it, like go fast off road in woods. To improve performance of the stainless whip, add about 10 feet of fine wire (22 to 28 gauge) with a gator clip. Do this at night because it looks goofy. Be sure you are in motion when you key up!

Ditto that--102" stainless whip and 6" spring on a ball gives the 108" you are looking for. I have this setup mounted on top of a Suburban and hits a lot of stuff at speed--low wires, limbs, traffic lights and bridges. Hit scrapes the roofs at gas stations and banks. The whip is just very slightly bent near the top. Fiberglass will not hold up to this abuse. I use an Icom AH-4 antenna coupler that tunes 40 to 6 meters with this whip. Be advised there are much better antenna systems out there, but they WILL NOT take the abuse that a stainless whip and spring will. Even my SGC whip antenna will not take this abuse and that is why I mount that on the left side of the vehicle (center of the road has less over head obstructions) and about 2 feet lower than the stainless whip. The SGC antenna performs better, but I will swap it out and put the stainless whip on if I am going to seriously abuse it, like go fast off road in woods. To improve performance of the stainless whip, add about 10 feet of fine wire (22 to 28 gauge) with a gator clip. Do this at night because it looks goofy. Be sure you are in motion when you key up!

I thought this was an exceptionally good
joke. Had to share it with others.

Stay warm back east, we're expecting
high 60's today. Must mean I have to ride to work.

The Landshark

I have the complete manual scanned that I will let people download
for free for the SS4900B radio. All you have to do is go to my website
at:

http://www.chargerscastle.com/cbinfo.htm

I cannot see anyone wanting to make money off of such things as this,
especially when it didn't cost them a dime.

Ah, I think you may have misinterpreted what I was saying. By regs, I did
not mean the FCC regs. One reg I remember is 'thou shalt not use the linear
at all for a period of six months'. Ok. Again, it wasn't so much these
'regs' as the attitudes. As far as a 'speed key license' - heck, if it has
to do with communications or electronics, no one has locked me out yet. I
passed 40 per in the Navy at which point I was excused from the class.
Their tape machine didn't handle anything faster (not that I could have gone
TOO much faster). Sure, there are regs and I got, perhaps, a bit
long-winded. My thought is that all of the flames (and generally due to one
technician with a bit of other help) are not really doing much good. One or
two (or a dozen) folks constantly complaining to the FCC is probably going
to relegate those folks to the top of the FCC's fecal list. Most of the
area around 27 MHz used to be (I believe back in the 50s or so) the ISM band
(industrial, scientific, and medicine). One use of it would have been for
RF heating of metals, etc. It is certainly one of the least desireable
areas of spectrum since it is not useful for long distance during much of
the 11 year solar cycle and during part of the solar cycle is subject to a

lot of interference. This is likely why not a whole lot has been done about it. Yes, areas around the 11 meter band are assigned and not often used due to what I just mentioned. Continued infringement on other areas may or may not cause problems; but if a lot of users start complaining (especially from other countries), then things may change. Just as drunk driving did not result in much punishment 30 years ago (as long as no one got injured), eventually folks started complaining. Likely, if the complaints pour in, the FCC will follow the lead the government took with tobacco and hit it at the source. Regardless, my thought on the whole subject is that it doesn't help to flame the ng. As has been pointed out, if someone starts with slamming the CB community on large in this newgroup, they are likely to get it right back at them. One last point: all the guys at KG6AAY (NavCommSta, Guam) and KG6NAC (Naval hospital on Guam) were hams and the gear was Collins, with two other operating positions at KG6AAY using Hammarlund, Heathkit, and a Henry 2K amp. None of the gear was modified for use outside the amateur bands, although we pressed KG6AAY into duty relaying all traffic from Rota to ComNavMar for about 3 days after a typhoon destroyed the Coast Guard tower on Rota (this was on 75 meters).

On fiberglass whips,

Something in a 96" model some of you may wish to
consider/try. The Francis CB-28 Wheeler Dealer or
the CB-50 Amazer. If the 96" will work for your
particular set-up I heartily recommend the CB-50.

73,
NAO911/Jack

Cherokee makes an outstanding SSB/CB handheld - model AH-100. They also
make a straight AM handheld which I think is the model AH-27. The AH-100
has been discontinued. However, there are usually several refurbished units
on eBay.

Hey, Dick,

You just reminded me of something. Speaking of "base coils" that adjust all over creation, I have one of those ancient Bay Mobile antennas that was the fore runner of the Webster Bandspanner. It has the 1 1/2" base coil with a 102" whip that slides in and out to resonate on frequency. I found it at a local hamfest (Charlotte, NC) for 10 bucks. I just bought it for nostalgia and, mostly, it hangs on a rack in the garage. It's not very efficient, of course, but I suppose in its time, it was considered "neat". Musta been around 1950 or so? I have used it on 20-10 meters and it works pretty fair. Seventy five sucks! Just for kicks, I once pondered a way to move it up and down like a screwdriver. NAH! Not worth the trouble. Still, it's in excellent condition and, I suppose, it spent quite a few years in someone's barn judging from the lack of wear--even the whip isn't bent.

I once loaned it to a friend and he broke it! But, being a machinist, he repaired it good as new (or even better)! Can't tell it was ever damaged and it works as ever--which was never all that good. LOL!

>KG6AAY (NavCommSta,
>Guam) and KG6NAC (Naval hospital on Guam)

Thanks for the clarification, Jim. I was the operator at KH6DND (Sand Island, Honolulu) when in port. Otherwise, I operated on Military circuits from NRLG and under the call sign 4YV at 34N 164E. In the Amateur bands, the ship's station ran a KWM-2, Heathkit amp, and at Hi-Gain Vertical 80 feet up on the yard arm.

I was able to keep a steady stream of phone patches going, except for a nine-month period when under radio silence in the war zone around Viet Nam. We worked through a list of names/numbers which was compiled before leaving port. Copies were sent to cooperative stations around the USA. That way, we only had to say, "Place call number 118" and the receiving operator had the info in front of him.

As long as I kept the calls flowing, I could do no wrong on that ship! Fresh bread from the galley. Extra mid-rats. You get the idea.

You and I shared a similar experience at radio school. I took the final exam--including code--at the end of the first week. Then I got to work with the instructors for three months so I could move up from E-3 to E-4 before shipping out to my first assignment. >g<

574. "No ground base antenna....."

Newsgroup: rec.radio.cb
Date: 2001-03-07 00:34:53 UTC
From: Randy <randy28@swbell.net>
Message-ID: <wjfp6.44$Yt3.83726@nnrp2.sbc.net>
Source record: 74998

Ok, I did something stupid. I live in an apartment and decided to try one of the "no ground" base antennas. Ok, I bit and deserve to be beaten with a resonant wet noodle! Anyway, this piece of whatever causes feedline radiation, high SWR, et al.............unless.....I hold the damn thing in my hand by the aluminum base. Then it matches fine. This seems to suggest to me that it needs some sort of counterpoise system. I am open to any suggestions that might help, but keep in mind that I live in an apartment when considering ideas. I do have a tuner, and have not tried that yet. That will be my next endeavor with this thing, although I don't hold out much hope for that working. I have tried decoupling the coax via the loop method below the feedpoint, with no success.

This thing is one of the 39" antennas that you see advertised by some of the sites on the web. Has anyone had any experience with these things, and if so, what did you do to make it work? Any suggestions?

Thanks,
Randy

Hey Q, I gave you the benefit of the doubt. But now you are exhibiting some ugly familiar traits of those who have been caught and exposed for their BS, that of avoiding the question in hopes it won't be asked again. Again, I ask you, with no malice, to please clarify the person or persons that you keep referring to that allegedly says it is ok to use an amp on eleven meters and that is ok to talk on ten without a ticket. Are you capable of answering the question, or is it high time your credibility is challenged, answered, and done away with also? You obviously have some technical merit, so you definitely can have positive input. But I must call into question your evasiveness of what should be an easy question for you to answer instead of avoid.

Some of the "no ground" base antennas are actually vertical dipoles
and can perform reasonably well, while some are just junk. It sounds
like you picked up an example of the latter.

> I am open to
>any suggestions that might help, but keep in mind that I live in an

Take the antenna back to the store and get your money back. You will
get better performance by loading up a rain-gutter (which doesn't work
too bad at all).

I need you to come to my house next Sunday and hold the antenna until the
game is over(okay,
that's perfect now don't move).hehehe
Try using four 9ft. lengths of 300ohm flat-lead ribbon cable,spread them out
at 90degree angles
away from the base of the antenna.Strip back 2" of insulation from each
cable,twist the parallel
conductors together and attach each cable to the base of the antenna.
The reason i suggested ribbon cable is it will be relatively unobtrusive
under the carpet.
And get a eye-care or Vision plan if you want to continue holding the
antenna in your hand
while transmitting.
Excessive exposure to RF radiation may cause cataracts to form in your eyes.
(feel my eyes they got double vision).
Take care brother.....

Ohhh ... Randy, as noted elsewhere, there are decent no ground antennas made. I do question the interaction of the antenna and metal within the apartment. If the apartment is largely wooden, you still have to deal with 110 volt electrical wires. Are the storms/screens aluminum (conductor)? If it is a brick or concrete structure, likely there are metal frames rather than wooden. I do NOT have a definitive answer for you, but perhaps someone in the newsgroup could help. If you were to run a small loop (they make a commercial one which runs from 14 to 30 MHz), the near field will be largely magnetic and is not affected by nearby metal nearly so much as a dipole (where the field is largely electric). Magnetic monopoles (loops) do have interesting possibilities, but I have not personally used one. I am curious if anyone has tried a loop in an apartment complex and, if so, what kind of results did they obtain. By the way, loops are also not affected nearly as much as dipoles if they are placed near the ground (again, near field is mostly magnetic) ... so it might be an interesting try, but I'd hate to spend the money on a commercial unit unless I knew it works. Anyone out there tried a loop? (interesting note, amateurs have constructed 160 meter and 80 meter loops mounted on the ground (at least only 12 inches above the ground or so) with good results!). Has anyone used a loop on 11 meters? If so, we'd love to hear from you!

What diode opens up a uPD2824C? D25 is just one step to unlocking the clarifier. An Expo "N" kit allows for extra channels in that radio.

Randy,
It sounds like you may be right, and using a counterpoise isn't that big of a deal. It would definitely help if you could 'poke' the antenna out of a window. An antenna completely indoors can (and will) cause RFI problems, just no way around that. The 'normal' 5 gal.bucket of torroids, and all the other tricks help with the RFI. Getting the antenna further away (outside) helps more.
Anyway, give the counterpoise a shot... can't hurt.
'Doc

Hello Randy: I have one of those antennas, but just haven't paid it any ming. ITs possible it needs a long run of coax to act a counter poise or the other half of the antenna.

In any case I am sure its junk. There just isn't any free lunch in the antenna world. I plan on feeding my antenna to the Do All Band Saw and see what they got in there.

Jay in the Mojave

>so, we'd love to hear from you!

A couple years ago I experimented with a few loops for 11m. They work
great for DF, but bandwidth is narrow, Rx sensitivity is poor, and Tx
just sux. For normal comm they have some serious polarity issues --
they seemed to work better when mounted with the loop vertical and the
axis parallel to the ground. I ended up building a goniometer for DF
and using the sense antenna for normal comm. I trashed the loops.

>an easy question for you to answer instead of avoid.
>

No evasiveness intended. As some here are aware, I own a small business, and that means "If I don't work, I don't eat." That's why I sometimes disappear for a few days at a time. I love reading alt.radio.cb, but sometimes I have to squeeze it in a few minutes at a time, and that has prevented my going back and pulling some of the posts which make reference to amps and to unlicensed 10 meter operation.

One of the most recent was written by the guy who likes to impersonate you. As I was reading the NG yesterday, it occured to me that you should feel honored. The guy wants to be just like you when he grows up!

I'll try to do some scanning later this week and pull up some of the past posts. Or, I can be lazy and just watch the new messages come in. It's never long before something shows up.

Have you ever heard my theory that Troll activity in rec.radio.cb follows the pattern of the Full Moon?

Ok, that makes sense. But, if you know it is someone who is imitating another, why would you even comment on it, giving him attention, when you know he is saying it posed as me or another, and doesn't mean it, except to have it attributed to another for blames sake? To everyone else, this would equal nobody saying it, so why would you continue to address it? He has never had any merit in this group at alI, not a radio question, not a radio answer, nada. To quote him is to lend credibility or merit to what he says, and if he is your only source of reference to my question, I sincerely question your motives, can you not see why? Certainly you retain the wisdom to see why one could call into question the technique you employ to bolster your position, do you not?

Hi,

I was wondering if someone could point me to a site on how to do this mod or how to remove it. I just picked it up used and someone put talkback in it, problem is when you key up the radio with the Dynamike up around half way it squeals like mad. If i turn the Dynamike down below half way people can hardly hear me.

Thanks,
Onyx28

I think the "11meter web portal" has a link to" Peg Leg's CB Shop", Peg's specialty is 148's.
Try this,use a external speaker(this will disconnect the internal) and mount it as far away from
the mic. as possible.
If you still get feedback fold a shoprag in 1/2 twice and fasten to front of speaker.
Want more muting,make several tight coils with the speaker wire around an 3/4" iron bolt and
tape the coils in place.
A competent shop could also install a trimmer to make the T/B adjustable.
The mic.gain on the radio should be turned wide open,then adjust output with the gain control
on the mic.
Turn the speaker around backwards if ya gotta.
SQUEAL (damnit man)

Having a little too much time on my hands right now, I thought it would be fun to analyze this post.

"MENTAL MIDGET=CBer"

The title identifies the intent of this poster -- to offend any or all members of a specified group of people by insulting the intelligence of all it's members. It also implies that the poster feels he has intelligence that is superior to the same.

On 07 Mar 2001 23:54:28 GMT, cberssuck1@aol.com (CBersSuck1) wrote:

>I have a couple questions for all you Cbers,

Introductory statement disclosing the format of the impending insult. It suggests that CBers have a certain knowledge which the poster lacks, which is contrary to what the poster implied in the title.

>Why do White American males try and emulate Black Americans

An attempt to provoke racial discord, but carefully avoiding any racially inciteful language. In this way he remains faultless in his own eyes if he should be successful in provoking a racial argument.

> when they get a CB
>microphone in their hands?

Clearly indicates that the poster spends some time listening to the CB, an admission which classifies the poster as a member of the same group of people he is attempting to offend. However, he only discloses that he listens, not talk or converse.

> Is "RAP" or "Jive-Talk" the norm???????????

Another rhetorical question. And again, racially offensive language is carefully avoided. This also demonstrates the inability of the poster to comprehend what is normal acceptable behavior, or "the norm".

Conclusion: The poster has demonstrated contempt for a group of people with a commonality -- CB radio. He also discloses that he shares that commonality, and therefore holds some contempt for his own behavior. Unable to control his desire to be accepted as a member of the group, he misdirects his anger towards the group.

The interesting aspect here is his use of racism. He has disclosed that he has observed behavior which clearly offends him, yet he refuses the option of using ethnic slurs. This probably indicates that

he is not a racist per se, but instead is offended that others behave differently from himself.

His contempt for himself is not based upon his racist attitudes because he is specific in his attempt to offend only CBers, not people of ethnic or racial distinction. His self-hatred is alluded to in the fact that he claims to only listen and never talk. His inability to communicate is the driving force behind his post. This may be due to a physical defect, but considering his post demonstrates his failure to recognize normal behavior, it is more likely that he is suffering from a social maladjustment and is unable to conform to "the norm".

This maladjustment can be 'readjusted' if the poster so chooses. However, his feelings of intellectual superiority indicate a sense of egocentrism which may be compounding his abnormal behavior. Each one of these factors tend to reinforce the other, and the result may render the poster dysfunctional in a normal social environment.

In other words, he needs to seek a mental health professional.

Given eBay's recent censorship of items they feel are "questionable", yet are perfectly legal for sale (scanners manufactured before 4/94 with cellular coverage, 10-meter amateur radios, amateur radio amplifiers, etc.), how long do you think it will be before the eBay police add CB modification books to the list of banned items?

I'll bet eBay's roving censors pull this listing before the auction closes. eBay has determined 10-meter amateur radios to be "illegal" and thus has banned them from it's auction site.

This despite the fact that many of these same 10-meter amateur radios are sold new at Amateur Electronics Supply, Ham Radio Outlet, and many other amateur equipment retailers.

What's wrong with this picture?

Greetings!

Check the Ext Spkr and PA jacks, remove the covers to do this.

Locate the jacks on the back and note the foil side, traces that go to
these two jacks, is there a resistor? It would be soldered between the
connection "hot" of one to the "hot" on the other.

Remove the resistor if you see one.

Check the speaker cone, did someone place an extra wire or resistor
from one of the terminals to a grounding location on the radio? Remove
that. But keep the speaker terminals connected.

Hope this helps, it's a shot in the dark but it might shed some light
on the trouble.

642. Re: Help on 240 channels

Newsgroup: rec.radio.cb
Date: 2001-03-08 13:09:04 UTC
From: qrm2000@aol.com
Message-ID: <20010308080904.07633.00000259@ng-fk1.aol.com>
Source record: 75067

Peter asked an excellent question:
>> I have seen CB radios that say they have 240 channels.......
>> I am confused how these radios relate to the 40 channels CEPT frequencies,
>> can any help please?

WalterB responded with this accurate answer:
>The President George that is sold to be used in other countrys has 15 watt
>dead key and has 2 more set of 40 Channals below channal 1 and 3 sets of 40
>channals above channal 40 and does over 30 watts on SSB.

And QRM dragged out the soap box one more time with this reminder about 10 Meters:

"Use caution, especially if the radio does not have a frequency readout. Some of the upper bands/channels will take you into the Amateur Radio allocation. You can obtain Channel Charts from most CB stores which will show you the settings which are 28.0 Mhz and above. Make a note so you don't stray into the ham frequencies. It is helpful to self-impose a *guard band* by staying below 27.955 so your modulation does not splatter into the weak-signal/DX windows just above 28.0. Your cooperation is appreciated."

643. WANTED: Raytheon, Apelco, Webster CB equipment

Newsgroup: rec.radio.cb
Date: 2001-03-08 14:01:03 UTC

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

I am looking for CB radios and walkie-talkies from Raytheon,
Apelco, and Webster for my personal collection. Any model,
any condition will be considered. Also need crystals, hand
microphones, mounting brackets and hardware, manuals, sales
brochures, service information, magazine ads and reviews,
and so on.

Drop by my Raytheon CB web site for a bit of interesting
and off-beat historical information, photos, etc!

http://www.qsl.net/k5dh/raytheon.html

Before I get "bashed" for posting CB-related stuff on the
amateur radio newsgroups, I must point out that the HUGE
majority of equipment and historical information that I've
been able to acquire so far has come from HAMS, not from
CBers! Many of today's hams were CBers "back then".

73,
Dean, K5DH

Simple. Ebay is scared. They obviously flirt with the gray area of the law in many of their instances, but they are scared of the FCC for whatever reason or someone has a personal issue involved. The smart money has always been on the sellers, NOT the buyers, at least on Ebay. In rare instances, one may actually snag a "great deal" on bay, but it is usually just the opposite.

Don't know it will work on the 148, but what worked for me on an Emperor with the same problem was a longer mic cord. About two foot away from the radio and that sucker screamed. Of course, like others, this is just a band aid to a larger problem. Get a competent tech and get rid of the talkback.

That's just too damn funny. Classic textbook (Max Weber?) case presented, then a dissection which was executed practically flawlessly. It is not easy to be entirely unbiased when studying other human beings, or practicing the science of sociology. The most significant stumbling block, is the fact that sociologists, like their subject matter, are subject to same type emotions. Nevertheless, the dissertation was ironically hysterical, whether original, plagiarized, or just sightly modified.

Actually, the dexterity at manipulating this thing ain't what gets it done. It's the countless hours of attempted self-induced carpal tunnel syndrome to both wrists amongst the crumbs, juice, soda, and sweat from government induced, daytime, psychotic episodes that cause me to go through keyboards only slightly less frequent than that of which most folk go through a tube of toothepaste, that gets it done. Uh, yea, I saw that moon. Wicked.

No, dink-boy. Illegal export radios are not banned from eBay because of a personal vendetta or fear of FCC reprisals (that kind of thinking is CLASSIC PARANOID TWISTEDHED, ain't it?)

The reason your 240 channel CB is banned from eBay is (and listen closely now) it's..

.ILLEGAL!

Yep. Believe it or not Twistie, expanded coverage CB radios disguised as phony "ham" rigs and designed to appeal to CBers and people without licenses are illegal to sell and operate.

That's why eBay doesn't sell them, dinky.

Sparky and Twistedhed seeing eye-to-eye?

What's next? Voobner, QRM, Doug Adair, Kari from Sweden, Phoneman, Train,
and Tim Nebo attending a Sensitivity Workshop together?

654. One day in Twistiefaggot's life

Newsgroup: rec.radio.cb
Date: 2001-03-08 18:22:03 UTC
From: keyclownslappa@juno.com
Message-ID: <20010308.131924.-4002843.0.KEYCLOWNSLAPPA@juno.com>
Source record: 75079

geeeee what a shame....
TwistieFaggot was home recovering from having been served a
rat in his bucket of Kentucky Fried Chicken. So anyway,
one day he went to sleep after giving Dweebo head and when he
awoke he was in his bathtub and it was full of ice and he was
sore all over. When he got out of the tub he realized that
HIS KIDNEYS HAD BEEN STOLEN and he saw a note on his mirror that
said "Call 911!" But he was afraid to use his phone because it
was connected to his computer, and there was a virus on his
computer that would destroy his hard drive if he opened an
e-mail entitled "Join the crew!" He knew it wasn't a hoax
because he thought of himself as a computer programmer who
was working on software to save us from Armageddon when the year
2002 rolls around. His program will prevent global disaster in
which all the computers get together & distribute the
$600 Neiman Marcus cookie recipe under the leadership
of Bill Gates.(It's true-I read it all last week in a mass e-mail
from BILL GATESHIMSELF, who was also promising me a free Disney
World vacation and $5,000 if I would forward the e-mail to
everyone I know.) The poor Twistiefag then tried to call 911
from a pay phone to report his missing kidneys, but reaching
into the coin return slot he got jabbed with an HIV-infected
needle around which was wrapped a note that said, "Welcome to
the world of AIDS." Luckily he wasonly a few blocks from the
hospital - the one, actually, where that little boy Dweebo who
is dying of AIDS is, the one whose last wish is for everyone
in the world to send him an e-mail and the American Cancer
Society has agreed to pay him a nickel for every e-mail he
receives. I sent him two e-mails and one of them was a bunch of
x's and o's in the shape of an angel (if you get it) and forward
it to twenty people you will have good luck, forward to ten
people you will only have ok luck and if you send it to less
than ten people you will have BAD LUCK FOR SEVEN YEARS).
So anyway poor TwistieFaggot tried to drive himself to the
hospital, but on the way he noticed another car driving along
without his lights on. To be helpful, he flashed his lights at
him and was promptly shot as part of a gang initiation. He was
found by the side of the road with a toothbrush in his goofy
ILLEGAL FAGGOT KEYCLOWN ASS!

Riddle me this, Batman.

Why are RCI-2950s, 2970s, etc., sold new at AMATEUR RADIO STORES? Amateur
Electronics Supply sells 'em. Ham Radio Outlet sells 'em. Even Lentini
Electronics...in the ARRL's backyard of Newington, Conneticut...sells 'em.

Obviously, these are NOT illegal radios, or major ham retailers would NOT be
openly selling them. So why then does eBay consider these radios somehow
improper for sale and thus ban them?

alot of Ham Operators that use 10 meter use RCI's instead of Radio shack or kenwood etc.
Theres a reason why The RCI is a hell of a SSB rig whether its 26mhz or 28mhz

The formula is watts=amps*volts or amps times volts.
Say it pumps out 60 watts max,then at 12 volts the amps would be 5 amps.

You mean like the prose below, proudly written by Richard? And no doubt you, Richard, consider yourself on, or near, the top of the pecking order too.

"Pecking orders come in several flavors. I will make no bones here that I do not consider a Codeless Tech to be a full-fledged member of the fraternity and in fact I refused to administer them as a VE"

He does more to turn away potential Hams, with his "old-boys-club" mentality than any waving of the rules book could ever do.

> The amateur radio hobby had -- it is decreasing fast -- a reverence for
> seniority.

Ham Radio was never about paying homage to the elders, it's not even in the rules either. It is about public service, experimentation with radio equipment, and RF propagation.

> When I got started the callsigns were issued almost
> universally in sequence. I had let my tickets lapse during the Nam Era
> and as a daddy and homeowner and a neighbor of a gung-ho freebander (I

Can't please everyone, Mr. Scott. Where you hold me is no concern of mine; I don't run my life by running a poll.

I do not consider the codeless Tech an entry-level ticket but rather a convenience for XYLs to have bread and milk delivered after work. Like it or lump it, that's the way it is.

You will get your wish in 3-7 years and get on the phone bands without CW. Have fun; I'll be dittybopping somewhere. I suspect I can live with this prospect better than you can.

Have a nice life!

Dick, NBK

Not to be a smart-ass <:, I've never needed a manual for a
type-accepted CB. All the controls are straightforward and
simple for even a novice CB'er to use! Just remember to key
the mike and then start talking, and to stop talking before
unkeying the microphone. This will ensure you won't cut
yourself off. (ouch!)

If there is any control that you don't understand, ask.

I don't talk on The Bowl. My little weakie-squeakie system would never be heard on Channel 6. But I do like to listen. It's great entertainment and you never need much equipment to receive the big boys. Example: today's monitoring was done in my office with a Uniden PRO340XL handheld CB & rubber duckie antenna. Double 6 and the others were loud and clear!

Is Double 6's piano/organ/singing routine a recording, or does he do that live each time?

Don't run my life by polling so where you count me is of no practical significance.

Sorry, the Codeless Tech is to allow the XYL to get a bread-and-milk delivery; it is not, never has been, and was not intended to be entry-level or anything of the kind. It tends to get people into a codeless dead-end and they spend more time railing against code tests (and more money on NCI dues) than the 2 weeks or so it takes to get to a whole 5 wpm. I refused to administer them simply because I did not then nor do now believe I was doing anyone any favors with the rules as they were then and are now. Not a status game in the world. Sorry if the truth, as I see it at least, disturbs you.

Do yourself and the world a favor and download Morse Academy from http://ah0a.org.

I have been on both sides of the class and seniority thing and found it a major load of bullshit on both occasions. At the same time, for you to dream of being my 'equal' is laughable. Clutter up the phone bands with the codeless license you will have in 3-7 years; I will be on the lower 25 dittybopping. I suspect that I can handle that certainty far better than you can.

It depends. Are the radios type accepted for Amateur Radio use? If not, then
the Amateur equipment retailers are selling them illegally.

Not true. If it outputs 60 watts, the input is probably between 100
and 120 watts.

Also, there are other consumers of power, such as power supplies that
and voltage regulators that are not 100% efficient.

So, how much DC is drawn? A DC ammeter would give a good rough figure.

If I had to make a good guess, it should draw about 3 amps on transmit at
120 VAC.

Ham gear is not type-accepted. To the extent that it is covered by the
regs (Part 15, etc.) there may be some stickers but it is not
type-accepted in the same sense as other services. This is one of the
giant loopholes that gets some of this crap thru customs.

Just curious. How low Does it go? If it gets into the 1.6-1.5 range
it is fine. You won't see any discernable difference in that and flat.

My my my ... are you sure? Are you absolutely CERTAIN? I'll tell you what - a good friend of mine was (and is) a CBer. Since he had his 1st class radiotelephone license (back in the late 60s and early 70s - as did I) I asked him about becomming a ham. He had the theory. Turned out that he was a high speed code operator in the service during the war. Yes, he could copy 30 WPM. He also had a ton of theory. He designed antennas. No problem. He had no particular accent. He just had a good time and was particularly good in theory. He just wasn't interested. What is your problem?

2.1 to 1 on the MFJ 259 at 72 ohms. It seemed to get a lot better
at 31 Mhz close to 1.6 to 1 . Put the Skipshooter back up there and
got 1.1 to 1 at 49 ohms.

The FCC is a revenue collection agency. If there aint no money in it, they don't want to fool with it. That would account for the records reflecting more bust on hams. They got more money than CBrs. Look at the fines they levy on Broadcast Stations. If you got more money, they watch you closer .

Greetings!

When using a power line filter, usually these are rated in volt amps
or just plain wattage.

In personal experience with a 2970, get a 50 amp filter [at least a
600watt rating], the radio and the vehicle will thank you. There is an
initial surge on key-up in FM and AM modes that can exceed 40 amps for
a millisecond or so - but the fuse is capable of handling the surge
but the filter will offer an EMF kick that can exceed the fuse rating
when you use marginal wattage power supply filters, the voltage drop
and the "snap" EMF/EMP under load switching on the line can damage a
component you spent good money on. Some have Zener protection, a good
idea to use when you deal with rapid load switching like this radio
will have.

They aren't cheap, but if you're looking at wattage, the voltage drop
across a filter is considerable - they do heat up. Get one with a
greater wattage than you'd expect to pull from the battery. The
cushion of capacity will help the radio and be better for your
vehicle.

Besides, if the in-line fuse used in a stock RCI'70 is still intact,
it should be about 40 amps. These things are current munchers.

Aside from that, the larger wires used on the filter, provide the
least amount of voltage drop - and I do recommend that you consider
upgrading the power supply wire to the radio to the same AWG.

A better power filter [like for car amps] use heavy gauge wire, settle
for no less than 6 AWG wire.

>

I doubt if many of us would tolerate this behavior in any other aspect of society. It should not be tolerated in radio circles either--and I mean CB and Ham clubs.

Unfortunately, people tend to react as described above,and it is appropriate to correct them---in a civilized manner, of course.

I heard about a person who collapsed on a city sidewalk. A group gathered around. One man elbowed his way to the front. He pushed aside a woman who was bent over the victim, saying, "Out of my way! I'm a First Aider!"

"Very well," said the woman. "But if you find something you can't handle, I'm Doctor Rosewood, the Director of Cardiac Health at the hospital across the street, and I'll be happy to lend a hand."

THE "WATTS" that the radio consumes from the power source (Supply) is
Not the same as the RF output power watts, & not Interchangeable in terms of using ohm's law formula to figure amperage draw.

Gee Richard, I have heard just about everything on the bands, BUT what you
imply above. In fact the few times I do hear an XYL, or YL for that matter,
they were the net control operator, or talking radio just like the guys do.

> You will get your wish in 3-7 years and get on the phone bands without CW.

Maybe a lot sooner than that.

Here in Florida, "Trailblazer" from Minnesota has been dominant all morning.
Also heard "314-Green Machine...on the west side of Denison, Iowa" earlier
today.

Never knew I could have this much fun with a cheap Uniden walkie-talkie! :-)

I'd say all hams talk about the same kind of things on two-meter repeaters
here in Burlington, North Carolina - BUT it usually isn't radio!
It's fishing, restaurants, their kids, their dogs - whether the ham is male
or female.

Some years ago my wife, playing den mother, was putting flags with her group in Jefferson Barracks National Cemetery off in an obscure corner when a storm came up and zapped a guy in the glasses and blew him out of his shoes. Her assistant, an RN, and her worked on the guy while one of the kids got the pros. When the ambulance showed up followed by the news crew the Boy Scout officials quickly decided that they could not have two women on the news and literally pushed them aside.

She was not entirely convinced she had done the guy a good turn but had the good fortune to meet him later. All he got out of it was a bit of hearing loss but with the charge breaking every blood vessel in his face, he must have looked like death warmed over at the time.

Most of the pecking order crap has disappeared from the hobby; non-sequential call signs did wonders. There are, however, some radio groups I would not be caught dead attending. When W�bxx is either the oldest ham in Iowa or the newest no-code in the block it is hard to tell.

And you are right. Don't take it, move on.

And on the other bands as well.

Brother Leland one will note has dropped the idiotic tag line. Might that be to cover his real problem here, the code according to Morse?

Even having done my 20 wpm before the gimlet-eyed FCC lady, that was 25 years ago and a lot of things have moved on. The village idiot can see the end of Morse testing in the amateur service coming after the 2003 ITU conference and the usual 3 years or so of ratification and pencil-pushing. We will live without it. Not a big deal. Actually CW is experiencing something of a revival which would probably be helped by no-code.

But that is not the rule today. It takes a whole 5wpm -- 25 characters in a row out of 125 or 8 questions on the content, or about half of what the Boy Scouts wanted for the merit badge. But what is an inconvenience at best (or worst) has caused a lot of people to get their knickers in a knot of epic proportions and friend Scott appears to be among them.

The observation on the no-code Tech is nothing new; the ticket is ten years old this month dating from long before no-code HF became an issue.

The bread-and-milk thing was one of the selling points. So was using your handheld to go hunting with your kid. So I don't think stating the obvious is much of a sign of bigotry as he would like to hang on us coded types. I will testify that my wife wondered why if I had the top grade of Amateur, Phone, and Telegraph (not quite true, the First Tel required sea time) why she couldn't get bread and milk like the CBer up the street or the plumber's wife.

In that context, Leland Scott is not my equal or anywhere near it. He may get the opportunity to earn equal privileges which he does not have today without taking a code test but at the moment he rails against the requirement loudly and at great length. So be it.

But I am not responsible for the conscious choices of others nor am I bigoted for noting the fact.

Dick McCollum NBK

Nope. I use two different computers, at different locations. One has the tag line you adore so much, and the other one does not. Thanks for reminding me it's not on this computer. I will have to rectify that on Monday. I don't want you to miss anything.

> In that context, Leland Scott is not my equal or anywhere near it.

That depends are what exactly you refer to. Otherwise thanks for so kindly providing the negative example of what incentive licensing has produced in Ham Radio today.

> nor am I bigoted for noting the fact.

But you are by the very words spewing forth from your own keyboard however, and I might add, I was not the only one to notice it either.

Damn straight, Punisha. Little known fact is that "using the service to conduct illegal activity" and "discussion that encourages illegal activity" is a violation of EVERY ISP's Terms Of Service.

I personally am gonna have a BALL ratting out the buttpumpers in this NG.

HAHAHAHAHAH!

Mr Scott, your restraint in dealing with this idiot is commendable.

In fact, you are showing MUCH more responsibility than
I would have were I to be in the war of wits with an
unarmed person. My hats off to you. And if we were to
meet, a shot of Drambui is definitely on me!

YOU are the kind of person I like to work on the air. In
ANY mode. Not the other kind!

I know we've had a few 'words' in the past, but there I
always felt it was honest difference of opinion, not the
'superiority' that the feeble minds always seem to claim
to as justification.

Catch you on the air. I've been hanging more on 17M
with my K2 than anywhere else lately. It's really a great
band! Never was on it before the K2, as my Swan 500C
that I've had since 1981 was very much 'pre WARC'.

The storm two weeks ago on Monday took down my
long wire, but I still have a 40M dipole up that the K2
brings in just fine with the ATU on any band 40 or
above. A little touchy on 80M though. (And I will be
getting 160M probably next month.)

Touch!

It sounds very appropriate. Especially since Mr McCollum
seems to feel so superior. Probably feels more superior
than most of the astronauts too, since a lot of them were
'codeless techs' or at least entered the ranks that way. I'm
SURE they are below the wife's going to the store for
bread and milk!

Glorioski, a Swan 500. Pretty decent old rig. For those not familiar with it, the Sillytronics was the sibling of the Swan 270/300, the 500's little brother. Had personality and moxie as well as Swan's very good audio.

Can't please everyone.

Dick

729. Re: Freq Modification For HTX-10

Newsgroup: rec.radio.cb
Date: 2001-03-10 02:48:49 UTC
From: ssb411d@cs.com
Message-ID: <20010309214849.19397.00000389@ng-ba1.news.cs.com>
Source record: 75354

Sorry,

The RS HTX-10 cannot be modified for 11 meters. The importers, RF Ltd., also market the modifiable version of the same rig as the Magnum 257. They cost approximately $50.00 more than the RS version. They're available from Panther Electronics @ http://rodan.pantherco.com for around $200.00 or so.

Technically, you could convert the RS model by obtaining the CPU used in the Magnum 257 from RF Ltd. and swapping it in, but by the time you do all that...you might as well get the Magnum 257. It's surface mount technology too, so the "swap job" is no walk in the park. Hope this info helps. If you just bought the rig, return it and order the Magnum 257 from Panther or whoever your favorite reseller is. Good luck.

73 de Bert
SSB411D

P.S. The Magnum 257 also includes variable RF output as well.

Now than sounds like fun. QEX had a nice write up of how gray-line propagation works on 160m one or two issues back. That could come in real handy for you on top-band.

You know, you're right this is getting a little
monotonous. I mean forging, then the X rated
crap was really the last straw. I forwarded the
entire posts to the proper parties.

Civil? I posted the FCC regs to prove my point, which I didn't even need to do since Voobner never said he used the radio, legally or not. I guess the shock was too much for you because you then resorted to name-calling. So now you offer an olive leaf as if you are doing me a favor, and you claim that I am willing to "die trying to be right"? That's what you call 'civil'? That's what I call 'projection'.

When you get tired of the personal attacks that have caused you to 'have words' with virtually everyone in creation, can we get back to the question that started all this: would you, having experienced the sensation, advise any newbie to start with the Codeless Tech?? That was the context of the discussion in progress when you came.

Quite obviously I would not. The Tech ticket in its many guises has been a trap for the unwary for nearly 50 years. It is not any personal failing that causes this; it looks like the way to go and in the days of the one-year Novice it was the only way to go to preserve a call sign that as I noted was of exaggerated importance. I am not jumping on you personally. As you tootle around the newsgripes, spreading joy and happiness wherever you go, you will and have encountered any number of people who have been there and done that and dusted the trophy with the sweatshirt. Larry Roll will admit it freely and there is no one more adamant about code testing.

The denial mechanism is as varied as the people involved but in general comes down to attempting to both buy achievement and unhorse the chievers -- kind of like busting up statues in Afghanistan. Dayton has become the no-code capital of the planet as well as one fun event for people who aren't proving a blessed thing. Might I observe in passing that you are a classic example of the Tech in denial; a veritable poster boy.

What you choose to do is up to you; you can become the resident expert on 160 gray line or you can work it -- macht's nichts bei mir. But I will not lead good people into the trap.

For the record. Anyone contemplating Amateur Radio is well advised to aim to take the General which includes a 5wpm code test and a pretty comprehensive rules and regs exam as well as the written for the bread-and-milk Tech. I would advise that person to download Morse Academy from http://ah0a.org and put http://www.qrz.com in his favorites as well as http://www.arrl.org

When it is all said and done, to play with an old Chevy Chase routine, I got the privileges and you don't.

Dick McCollum, N&#65533;BK

You really don't want to do that. Hard tho it might be to believe, you will actually decrease the 'talk power' of the radio.

The nature of AM (rattle my e-mail if you want to explore the issue in more depth) is that you cannot get more than 1/4 the carrier power into one sideband, period. Trying to do so will have two effects: the first is that any excess power goes into distortion and spurious crap. This is why the limiter is there. Transmitting mush is no way to increase punch.

The second is that 'talk power' depends on average modulation level. The human voice has a peak to average ratio of about 25 percent. By limiting the peaks and cleaning up the resulting distortion, you can run the audio a bit hotter and raise that to the 35-40%. There are broadcast techniques that will get it higher yet. By gronking the limiter you also lower talk power.

One technique that has not received a lot of play on CB is playing with the frequency curve of the audio. It has been well known for decades that voice frequencies below 300 Hz are useless but take up audio power by the bucketful; similarly, things become pretty useless above 2500 Hz. You may also have noticed that women come thru a lot better than men, partially because they are different from the background but partially because the higher pitches do come thru the mud better; police like female dispatchers. If you could play with an equalizer, you would find that a gentle curve centered around 1200 Hz with the highs and lows ruthlessly eliminated makes for better communication. Shure made communication mikes for many years (544???) that did precisely that in the mike itself.

Spencer, don't do nuthin stupid.

Dick

I believe your argument is overlooking a key point of fact. If the question here is whether or not to start a ham career as a Technician, the obvious answer is that he HAS to start as a Technician because the test is required in any event, even if the applicant sits for the General, Extra and snooze code all in the same day. He must pass all of the tests to be licensed in whatever class is appropriate. If a fellow wanted to test this month for Tech, next month for the code, the month after for the General and finally for the Extra, it would only have protracted the licensing process which could have been completed in a single afternoon had the applicant had sufficient background knowledge.

Point taken. So take the code test first. It is good for 365 days (not
one year oddly enough).
Get it the hell out of the way!

The beauty of doing the code first is that with the Tech, it gives one ten
meter privileges. More times than not, existing antennas (dare I say
existing equipment) can be used whenever the call sign arrives.

In terms of studying, you simply cannot practice code more than an hour a
day (two halves preferable) so you may well have the time. Element 2 is
not that hard. Element 3 makes admirable bathroom reading :-). Think of
it as the manual for your driver's license or CDL; same stuff, different
day. It is the FCCs chance to work off every mandate from ITU, Congress,
and who laid the rails to be sure you know the rules. They also insure
you have heard of sunspots. The Extra does take some background and skull
sweat.

What you are seeking to avoid is getting on the air VHF and spending years
convincing yourself that you shouldn't have to sweat code then indulging
in all sorts of gyrations to justify it to yourself and everyone else. As
Leland and few other NCTs on this group prove regularly, it is not a

pretty sight.

I think we generally agree. Far too many shack on a belt types in this part of the world who hqve no ambition to learn a thing about electronics beyond their tech license. I wouldn't quarrel with it if they were experimenting with moon bounce or microwave, but seems to be a waste just to call ahead to see if the wife needs a loaf of bread. I'm distributing a CD to guys here wanting to practice code--random letters at about 15 wpm spread out to 5 wpm so they can better learn the sound of the letter and get over the hump. I would argue that the tech license is so easy to pass at this point that is a good incentive to get started while the code is going to take some real time, even at 5 wpm, and if only completing that element, they still have nothing to show but the csce.

Very well put Dick,
Panther Electronics makes a "Dynamic Speech
Compressor" that may be just
what the doctor ordered for Spencer's Superstar 4900B,this is how it works:
If you've ever seen a carrier-driven AM signal, you know that you only reach
peak power output around 30% during a standard voice communication.
This results in an inefficient use of total available power. The DSP clips
the high ends (wasted splatter) and brings up the lower portion of the 70%
of "wasted" power.
The signal is then compressed by 30 dB to result in 90% modulation level at
virtually any speaking volume! What this means to you is greatly increased
power output, as well as increased audio volume without splatter and
distortion. You sound very LOUD without becoming raspy and overmodulated.
I was thinking about installing one of these in my 2950 but it is too damn
loud already even with
my Astatic 636L N/C mic.

all of these self-righteous people in here make me laugh, yes it is illegal to transmit below channel 1 or above channel 40, to operate above 4 watts rms, or 12 watts pep. but I wonder why any legal ham operator would need a 3 kw antenna tuner, or a amp that produces well over 1500 watts pep, isn't this the legal out-put on a few of the ham bands, if you guys think that manufactors do not go after the 11 meter crowd you must live in a dream world, ameritron, yaesu, kenwood, etc. make (all) of their equipment about as easy to modify for 11 meters as they can, and I bet if you looked into their sales, that it would show that more equipment is sold to the 11 meter crowd ,then the amateur crowd, and they know this,that is why their equipment is so easily modified, you can call most amateur radio dealer and they will sell you anything you want (linears) included, they will tell you that it is not (illegal) to buy the amp, that it becomes illegal if you use it with-out a proper license, take care and God bless to all, even the ones that play God

When the latest riceboxes have Ancient Modulation on them, you will get no argument from me.

The 3 kw tuner is another matter. When you are working into a funny load, the voltages and currents in a tuner can get hellacious. Using one that will do 3 kw into a load that does not require much touching up when doing 500 into a weird load makes a lot of sense. The biggest operating difference between CB and the ham bands is the multi-band nature of amateur operation.

It has been a fact of existence for 25 years I know of that the average outlaw CBer has better gear than the average Extra. We did not get too bent over the ten meter linear ban because few ran power on ten or fifteen meters. Now 75 and 20 are different stories entirely.

Preaching to the choir is bad enough but the legal eagles on this newsgripe are trying to sell the Watchtower on the road between Mecca and Medina. Major pains in the drains.

InsideTheWeb Shutdown Notice

Since January 1997, InsideTheWeb has provided free message boards to online communities. Our goal has always been to offer an easy-to-use and technically superior format for threaded discussions. Though we have hit a few bumps along the way, we feel we have succeeded in that ideal.

As some of you may know, internet advertising revenues have fallen to extremely low levels over the past several months. Supporting a community service such as InsideTheWeb is impossible without a secure source of funding and we are being forced to close our doors. While there are certainly other means of generating income, we do not have the ability to address them without sustaining significant losses in the foreseeable future. Therefore, as of March 9th, we are shutting down all InsideTheWeb message boards and ceasing site operations altogether.

We would like to thank you for visiting us! We sincerely appreciate each and every one of you for your patronage and support! We have thoroughly enjoyed talking with many of you over the years and wish you the very best. It is people like you that made InsideTheWeb the best message board community on the internet!

Sign up for a free Beseen Bulletin Board here!

Thank you!
InsideTheWeb Staff

** Don't shake my tree if you don't like what comes down**
Life is too short... Enjoy the ride...

Greetings!

You bring up some excellent points. There is a lot to be said about filters - I recommend someone that is curious about this, read up about negative feedback in transistor amplifiers and op-amp designs.

These are the main culprits as to why radios sound they way they do, and by disconnecting the limiter, you are not only removing a control, but broad banding the speech being amplified.

The AM carrier is one single frequency, with the audio envelope produced both above and below the frequency.

The reason for the filtering is to reduce the spectrum of bandwidth used when modulating an AM carrier wave with audio. Obviously, the higher tones are farther away from the center carrier frequency, which means greater bandwidth and also higher power consumption that the device needs to use to produce the fidelity when transmitting.

A limiter, properly designed, should be able to reduce audio to a given level and maintain the fidelity, this is not always the case.

Due to the bandwidth used, the audio is trimmed down in level back at the mike inputs in a stock radio. Due to the way the design is done, sample audio, rectify, smoothed, then applied as negative feedback [simple bias and straight to ground] the fidelity is hammered pretty hard and will generate artifacts on it's own if they are not tamed.

This is the purpose of the filters, the limiter section is a simple clipper circuit in a typical CB radio. The higher tones are causing the rectifier in the limiters detector, to push more current into the circuit and the clipper works harder. As is does so, the audio waveform is getting butchered. What would have been tinny sounding audio to begin with is now brought down to a lower tone.

And if it's hammered really hard by the operator yelling into the mike, the clipper doesn't leave much left of the original signal to work with and hence the "bassy audio" so prevalent in todays radios.

There's also, Input overload, and that too can generate the same effect. Saturation of the input to the audio amp stages from a high-output microphone generates the same clipping effect.

So when you mention filtering, yes I do agree, there are ways about this problem to prevent a limiter from over-reacting. The limiter is taking the higher tones and magically converting them to bass tones. In order to make this work, it takes a conscience on part of the

operator to understand this.

By far, the easier way to improve the fidelity to remove the limiter
but you're left with a radio that junks out TV's and phones every time
it's used.

When you discuss filtering, and making changes, unless the limiter
itself is altered to compensate for the higher power generated by the
higher tonal bandpass, this becomes a moot point.

A 300 Hz tone, a 1KHz tone, and a 2KHz tone - these are processed
differently by the limiter - due to power levels of the spectra. So,
when looking at changing filters, lower tones produce a given level of
100% modulation at a given power level, while a higher tone at this
same power level, may appear as a 150-200% modulation envelope to the
limiter - this is the problem. The frequency bandwidth is not
compensated properly and the curve favors lower tones.

I should be really interesting to know how he made a 10-11 meter amp work with 6 and 2 meters. My experience tells me that there would NOT be ANY signal generated from the amp because of frequency response.

just a thought

Subject: when you think you're having a bad day...

THE NEXT TIME YOU THINK YOU ARE HAVING A BAD DAY:

Fire authorities in California found a corpse in a burned out section of forest while assessing the damage done by a forest fire. The deceased male was dressed in a full wet suit, complete with scuba tanks on his back, flippers, and facemask.

A post-mortem revealed that the person died not from burns, but from massive internal injuries. Dental records provided a positive identification.

Investigators then set about to determine how a fully clad diver ended up in the middle of a forest fire.

It was revealed that on the day of the fire, the person went for a diving trip off the coast some 20 miles from the forest. The fire fighters, seeking to control the fire as quickly as possible, called in a fleet of helicopters with very large dip buckets. Water was dipped from the ocean and then flown to the forest fire and emptied.

You guessed it.

One minute our diver was making like Flipper in the Pacific, the next he was doing the breaststroke in a fire dip bucket 300 feet in the air.

Apparently he extinguished exactly 5'10" of the fire.

Some days it just doesn't pay to get out of bed.

This article was taken from the California Examiner, March 20, 1998

STILL THINK YOU ARE HAVING A BAD DAY?

A man was working on his motorcycle on his patio and his wife was in the kitchen. The man was racing the engine on the motorcycle when it accidentally slipped into gear. The man, still holding onto the handle bars, was dragged through the glass patio doors and along with the motorcycle dumped onto the floor inside the house.

The wife, hearing the crash, ran into the dining room and found her husband lying on the floor, cut and bleeding, the motorcycle lying next to him, and the shattered patio door. The wife ran to the phone and summoned the ambulance.

Because they lived on a fairly large hill, the wife went down the several flights of stairs to the street to escort the paramedics to her husband.

After the ambulance arrived and transported the man to the hospital, the wife up righted the motorcycle and pushed it outside. Seeing that gas was spilled on the floor, the wife got some paper towels, blotted up the petrol, and threw the towels in the toilet. The man was treated and released to come home.

Upon arriving home, he looked at the shattered patio door and the damage done to his motorcycle. He became despondent, went to the bathroom, sat down on the toilet and smoked a cigarette. After finishing the cigarette, he flipped it between his legs into the toilet bowl while seated.

The wife, who was in the kitchen, heard the loud explosion and her husband screaming. She ran into the bathroom and found her husband lying on the floor. His trousers had been blown away and he was suffering burns on the buttocks, the back of his legs, and his groin.

The wife again ran to the phone to call the ambulance. The very same paramedic crew was dispatched and the wife met them at the street.

The paramedics loaded the husband on to the stretcher and began carrying him to the street. While they were going down the stairs to the street accompanied by the wife, one of the paramedics asked the wife how the husband had burned himself.

She told them and the paramedics started laughing so hard, one of them slipped and tipped the stretcher, dumping the husband out. He fell down the remaining stairs and broke his arm.

Taken from a Florida Newspaper.

Having a bad day? Just remember, it could be worse.....

A woman came home to find her husband in the kitchen, shaking frantically with what looked like a wire running from his waist towards the electric kettle. Intending to jolt him away from the deadly current she whacked him with a handy plank of wood by the back door, breaking his arm in two places. Until that moment he had been happily listening to his Walkman.

And finally.......

Iraqi terrorist, Khay Rahnajet, didn't pay enough postage on a letter bomb. It came back with "return to sender" stamped on it. Forgetting it was the bomb, he opened it and was blown to bits.

Your day's not so bad, is it.....?

Yes!! This works well. Some of the R/C remotes with the el cheapo cars
that you can get from a toy store have either a 49MHz tx in it or a 27MHz
and most of them are just crystalled in between channels. The one I have
just puts out a real loud beep when you turn it on. Haven't had to use it
forever, though. Also, many QRP ham designs can be made to work on 11. The
Pixie transmitter comes to mind.....

Have fun, play safe, and don't get in trouble

>generated from the amp because of frequency response.
>

Hmmm. How can we best explain Troll radios so you will see how this is possible?

A Troll's equipment covers ANY frequency with any mode. There is no power loss since the circuits can handle every band.

Also, Troll radios can run at near mega-watt levels, even in a vehicle, without draining the source of power or blowing up the antenna.

How is this accomplished? It's a secret. If we reveal it to you, we have to kill you. Simply accept it as fact. If a Troll tells you something about his radio, you can "take it to the bank" that there is no exaggeration.

Hey, it was a good question. Hope this helps!

Source record: 75397

Why take the code first? It's a credit that expires and in itself offers absolutely no privileges. Take what gets you going first. If that means a tech ticket, fine. Now whatever you have does NOT expire, and future enhancements with code yield IMMEDIATE results. I.e., you can walk out of an exam session and BANG use new privileges. And taking that to another level it means when you can show you can use the code, you actually can go home and THAT DAY use it! Can't get more direct reward than that.

If we want people to use CW on the HAM bands, having they learn CW and worry about 'expiration' in 365 days is pretty silly. It makes CW into a 'paying your dues' kind of task, as opposed to something that is fun and practical.

In fact, I think making someone take a CW test and not letting them on the air IMMEDIATELY would be VERY counterproductive to the CW crowd.

If you use it when you earn it, you will see how much fun it is, and a large number of people will stay with it. Making it a task just to pay your dues makes it something to be avoided later on.

Mike

Yes, a 500C. I've also owned a 500, a 500CX, and a 700CX
at various times. But my 500C was my first. And I still have
it, and the external VFO, and the VOX (semi-break in for CW)
module, and a second power supply brick with the DC
chopper for mobile use.

And Swans really don't drift. After warm up that is. But
the way the single VFO worked sometimes you would find
yourself walking up or down the band against someone.
The dual-VFO setup solves that issue real quick.

But I DON'T own a microphone. Thing is, my 500C has
NEVER EVER since I owned it had a mic used in it. In
fact, I don't know that the mic jack even works. It's never
seen anything other than a straight key. Since 1981.

And the other Swans that I've owned over the years I don't
recall that I ever even had a microphone for any of them
either.

But, be that as it may, I STRONGLY object to anyone that
says that anyone HAS to learn CW. It's fun, it's enjoyable,
and it can be relaxing or intense, depending on if you're
doing casual communications or contesting. But one thing
it should NEVER be is an 'entry badge' to HAM radio.

For too long CW has been held as the holy of holies by
people who had no skill other than a limp wrist, but they
could pay their dues and then feel superior to those who
just 'didn't get it' kind of thing. I think the 'to 5wpm drop'
was a good first step. Know what? It got me BACK
into CW, something that had not done since 1988 or
so, and not seriously since 1984 or so. Oh, I'm not even
comfortable yet back at 5wpm, but the little I do operate

there is fun and drawing me back to it. I even bought the K2 to get back into CW. (I DO have a mic on the K2, and I run much more SSB than CW with it.)

But as fun as it is, it should NOT be MANDATORY for anybody.

Hmm, the channel thing is probably a bad connection at the
flexible PCB from the switch/display to the main board.
The switch could also be bad...

As to the 'on/off' thing... Do you hear a clicking when that
happens? If so, there's a little blue 1uf Tantalum cap that
goes bad right back near the power transistors. Common
failure. I forget which cap it is, but it's pretty obvious on
the board once you spot it.

Normally it is done unbalanced, i.e. against a ground of some sort. Most tuners have a big ground lug for the purpose.

Such things as bandwidth vary by installation. No good way to tell. Same with directivity.

Has two potential disadvantages:

1. Joints can create diodes with unpredictable but generally disastrous effects on electronics in the vicinity. Seamless gutters are a great invention but even they have some extensions added.

2. The ends of any antenna are voltage nodes. The formula Watts = (E**2) / 1500 will give you some idea of the rms voltage at the end of the downspout. Even at 6 watts, it gets to about 85 volts which can present an unpleasant surprise to the dog taking a leak. There are safety and fire implications at higher powers. Don't take the voltages to the bank, there are a lot of things that may change them; a 50% margin is about right.

Help any?

Dick

I gave up 'should's a long time ago. There was a time the requirements made sense although to my mind it was never justified to ask more than 12. That time has passed. Testing it is unjustified and is on the way out. Got no problems with that.

But it is the law as it stands and CW is a useful amateur skill. Getting ones knickers tight because of it is merely stupid. You get a Nebraska Property/Casualty insurance license you learn Blue Water Marine coverage; useless as a third tit in most cases but you do it and go to work in a boiler room for Progressive, et al and don't worry about it.

There are those who have made a first-class Cloud Cuckoo Land out of the whole issue and they give me maximum gas. Learn it and be done with it already -- or wait and shut up.

Running code as an old time Extra is a lot more pleasurable these days -- no one thinks 'code practice' and turns the knob on the keyer. Keeps the sweaty palms to a ladylike belch. Having had a few layoffs myself over the years, I know of what you speak. Personally, I think no code will be good for the hobby in a lot of ways. But I don't think NCI will fold up when it happens; there is a bit more to the agenda.

Enough. Use the e-mail if you wish; this is no more off-topic than most of the posts here but we should probably wave as we go thru the station.

This is one of those judgement issues about what is better in the long run. I disagee but I do see the argument.

As a practical matter, however, one is not restricted to taking one exam and Element 2 is just not that hard and is covered very well by any number of good pubs. For everything there is a season and after getting on VHF phone the season does not seem to ever come again. The result is a lot of self-deception and hostility.

And there is the matter of being able to use 10-meter capable equipment right away.

Those passing 1 & 2 will be offered the chance at 3 which is part of the reason for it having much of a failure rate at all. Even if your troops don't really aim at it, if the pub is available it will be read in the bathroom and someone will pass. Peer pressure alone will finish the job at the next exam session -- bank on it.

Richard,

By your posts mentioning "Ancient modulation", I assume you have a particular dislike for that mode. Yes, I understand the *possible* reasons (bandwidth, etc.), but does this dislike run towards those hams who like to run AM? Is there some reason that hams who wish to do so should not run AM on 3885 or 7295? I don't do AM a lot, but I do get in with the guys on 7295 on occasion and run some AM--and I do so with my Icom 706s which do a fair job on AM. Just my own opinion, but it seems that there is room on the bands for everybody to do his particular thing without conflict. Yet some of the SSB guys can't seem to stand the AMers and will deliberately move close to 7295 just to annoy. I don't see the need in that. As I said, I am not a fervent Am operator, but I DO like to run a little AM just to break the monotony. Would you care to comment?

I guess it is a question of why it is, at no small expense BTW, put on the rigs. Is it because of great demand from the Amateur community or (in the context of the original posting) to sell hardware to any buyer who can come up with the coins. I happen to believe the latter.

As far as AM itself, it is not my cup of tea but it does not generate any huge emotion one way or the other. You are not, as I believe I observed once before, a threat to civilization as we know it hammering away at 7295 or any of the other places Antique Mary shows up. If I had a Globe King and an HQ-129 Hammarlund collecting mouse turds in the garage I might even be there now and again to watch the tubes glow. Back in the days I had AM on 160 via one of the outlawed marine radios from 150 meters. Hell, I even like to hear the excellent AM on Radio Spain now and again. But I find it a bit much to pay for what amounts to a giant leap into the past, particularly when it is less than phenomenal AM. But then I like the QSK on Ten-Tec gear that few are willing to pay for even if they had a clue what it is.

There are undoubtedly those who object to running it although most of us who were around for the SSB/AM wars are either dead or beyond giving a shit. The CB connection is more than likely a part of that animosity.

Some have nothing better to do. Certainly doing it in non-international frequencies should give you a pass. So no, tain't me QRMing you.

Besides, if I had a Globe King and an HQ-129 it would be doing 850 shift RTTY at 28.085.

The closest thing to this is the Whistler900 CB radio. It has 2 channels selctors and two squelch controls. It also has a transmit button under each of the channel selectors so you can change back and forth at the touch of a button. You can talk on one channel at a time but listen to two channels at a time. You could talk on one channel and receive on the other. If you had two of these rare radios, I only have one, you both could be tuned to the same two different channels but have your transmit buttons on opposite channels selectors and people trying to listen would only hear a one-way conversation. So, yes it is possible. These radios came out in the 1980's.

I left CB radio 19 years ago when I got my novice ticket. It felt good communicating with people that knew what they were doing and were proud of their accomplishments in getting licensed. Over the past year things have gotten shitty on the bands and operators are stupid. It sounds just like the CB I left 20 years ago except that the rig's readout is showing a ham frequency. To bad there isn't a better radio service I can go to now that the bands are full of idiots. Thanks FCC, Thanks ARRL, I'm back to 11 meters in the middle of a ham band.

Sure you did. The fact that you posted this message to nine newsgroups, used a fake identification, and made numerious false statements about ham radio, clearly shows this as an attempt to stir up trouble instead of voicing an honest complaint. If you want to stir up trouble, try not being so transparent next time. Until then, you rate less than a one on the old troll-o-meter.

Hi there!!

I'm developing a frequency database program and would like you all to send me frequencies from all over the worl so that I can put it into the database. When the program is finished and is filled with frequencies it will be released as freeware.
I will post a note as soon as it is availible.
So please take a few minutes to give me some frequencies.
I would appreciate if you write like this:

TX Freq, RX Freq, Modulation (AM, FM etc..), City, Country, Info
146.2125, 150.2125, FM, Norberg, Sweden, Taxi Norberg

Please send the frequencies to: frequency_database@hotmail.com

Thanks for your time.

73, Magnus

You need to get your meter checked, TR. This message was way too transparent to rate a ten. It also lacked the style and sophistication to be a highly rated troll. My meter still shows it as less than a one (and its a generious meter).

Having had a few snores in the interim, I will try to give you the reply
you deserve.

My references to 'ancient' or 'antique' are just that -- simple
observations of fact as I see it.
Any long-term solution to the problems of CB will, in my opinion (never
had a humble one in my life) require abolition of AM, partially for
spectrum usage but more because in the hands of idiots AM is a dangerous
weapon. The old Element 3s would go on endlessly about overmodulation,
etc in a general attack on spurious emissions. Things have not changed.

A five-watt limit virtually invites amplifiers -- did almost from the
beginning. AM linears are not easy to do right and have an infinite
number of ways to botch them up with generally disastrous results. The
newer ones are better than some of the crap of earlier vintages -- they
had more spurs than a Texas saloon. And as we notice here every day,
there is an unbelievable amount of plain mythology about AM floating
around.

So my opinions of Ancient Modulation are technical rather than emotional
and restricted to the environs of 27 MHz. They do not extend to the
people involved, just the hardware. But I do point out that only

Broadcast, VHF air for safety reasons, and CB still use AM on an active basis. It is legal on the ham bands but is certainly not the primary communication medium.

So do I turn red and drool when I tune across 7295? Nooop. To each his own. You guys want to fight the broadcast people, feel free.

Unfortunately there are those who never quite outgrew the 'shmeer the queer' games of their pre-teens and will land on you for no better reason than you are different. Happens to the SSTV guys and on occasion the data pushers as well. And some will just try for the goat, "Look at me I'm Sandra Dee lousy with virginity". Those funny lites below the bumper aren't called Virginity Lamps for free.

The SSB/AM wars on the ham bands are long over so I doubt any of the OTs are in there fighting the right fight. All you have is the reason most people don't signal lane changes on the freeway; there is always some hoosier who will try to stop you.

Yes, there is enough room in the ham bands to let everyone do what he damned well wishes so long as he stays out of DX windows and Old Fart nets on 75 and 20. I have had a long desire to fiddle with DSB suppressed carrier and synchronous detection, the major competitor to Art Collins SSB system in the 50s. That would probably cause major paroxysms among the juvenile delinquents.

Go ye and sin some more. Just don't expect to do it in peace.

Dick N&#65533;BK

799. Buzzard Valley, repost by popular request

Newsgroup: rec.radio.cb
Date: 2001-03-11 13:31:03 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3AAB7E17.E3DAC9F8@qnet.com>
Source record: 75223

Buzzardï¿½s Valley, ... itï¿½s not for cars. Or CB radio to the rescue!

Buzzardï¿½s Valley is a little unknown very steep Jeep trail, and even the AAA map says its a Jeep trail. This is located just behind the Cross area over looking the Sunland Tujunga Ca. in the Verdugo Mountains area, which is 20 miles north of downtown Los Angles.

Back in the grand ol days of the early 1970ï¿½s Buzzard a local CBï¿½er drove a old 1960 Ford Falcon with a 102ï¿½ stainless whip antenna mounted right smack dab in the middle of his less than premium old car. It got out really well.

Buzzard a true character and a real CBï¿½er, was a single man who liked to date the ladies and show them a good time. I remember a few times he showed up at my house to talk to my Dad, Dad would buy him a drink before the nights activities. He was a tall man with a go-tee and black hair. But a full blooded, card carrying, CBï¿½er, and Character all the way. He was a neat guy.

Well as things would happen, Buzzard was on one of his dates with a young lady, and decided to show her the lights of our little Metropolis of the Sunland Tujunga area, by driving up the Cross, a large Cross made of cement and has a rock base, on top of one of the hills in the Verdugo Mountain Range. And can be seen for miles (A local makeout place, with a good view of the local town) We have an annual Easter Sunrise Services up there each Easter. In order to get the Cross you half to drive up a very steep road, which turns into a dirt road and winds around the hills a lot. In the dark if your not familiar with the roads, you will get lost. Yup you guessed it, ol Buzzard driving up to the Cross, got lost somehow. He ended up going South, when he should have turned North. This put him on a dirt road, which when going down there was no turning back, until you hit the bottom, which had a old rusted and bullet rittled car. That obviously had found Buzzards Valley years ago, and never made it out. Yep Buzzardï¿½s Valley was discovered, again. Maybe it was the darkness of the night. Or probably to much of Dr. Leoï¿½s hart medicine (Lord Calvert Bourbon).

Good thing Buzzardï¿½s CB Radio in his 60 Falcon got out well.....

ï¿½ Break , Hay this is Buzzard, I am in a hole and need helpï¿½ A females voice is herd in the background cursing Buzzardï¿½.

ï¿½Break Break, hay I mean it, I am really stuck here you guys!ï¿½

ï¿½Ok ok Buzzard, this is Patrol, just where are you at, Iï¿½ll just trot out there and pull you out with my 4 wheel drive Nissan Patrol and my 10,000 lb. winchï¿½

ï¿½Yeah I need a tow all right, but is one 4X4 enough?ï¿½

ï¿½Are you kidding, this thing will pull the Rock of Gibraltar off its foundationï¿½ A liquid is herd being poured into ice filled drinking class, as Art is talking over the radio.

ï¿½Yeah whatever Art, take the road to the Cross, and instead of turning North at the Y, turn left, I am about a half a mile down from thereï¿½

ï¿½Ok hang on there Buzzard, helps is on the wayï¿½

Another CBï¿½er asks if he can help with his 4X4 drive... ï¿½Hay this is Bobcat Iï¿½ll help you out also Buzzard, be there in a few minutes with my Jeepï¿½

Yet another CBï¿½er is herd: Hay Buzzard this is Orange Peel, Iï¿½ll slide on up and help alsoï¿½

As the CB rescue activity gets busier, other CBï¿½ers are on the way to the newly discovered ï¿½Buzzards Valleyï¿½

Buzzards Valley was a long steep road that progressively got steeper and nastier, most of the four wheel drives had a hard time getting out by them selves. And as each CBï¿½er four wheel rescue vehicle arrived, it had to go to the bottom of Buzzards Valley to see what had happened. And because there wasnï¿½t much room there, they almost got stuck in a grid lock at the bottom of Buzzards Valley.

And now someone had to take charge of the rescue effort so that additional time would not be lost. Art, CB handle ï¿½Patrolï¿½ took charge, maybe because of his dynamic personality, or probably because he brought a case of beer.

All the other four wheel drive vehicles would half to go back to the top of Buzzards Valley. And after this was all done, Art attached a elastic Nylon strap to Buzzards Car, and the other end of the strap to Artï¿½s rear bumper. We could hear the CBï¿½ers at the top of Buzzards Valley say over the radio ï¿½You need to get up more speed Art if your going to pull Buzzard out of thereï¿½. And ï¿½Sure is a lot of rocks and dirt being thrown onto and into Buzzards car from Artï¿½s Jeep, WOW!ï¿½

After a many futile and incredible bumpy attempts to tow Buzzards car out of the valley, it was obvious that more help would be needed. The entourage of CBï¿½ers at the top of the steep road, where making comments over the radio, like: Boy that car really bounceï¿½s a lot, and Buzzard spilled all his beer, that last time. So more drastic actions where taken, more beer was sent for, and the CB four wheel drive rescue party ended up chaining three, four wheel drive vehicles together. This finely brought Buzzards car out of the clutches of the steep, treacherous and rut filled ï¿½Buzzards Valley ï¿½.

When the rescue party arrived at the top of Buzzards Valley, with Buzzards car in tow, everyone was happy that the CB four wheel drive rescue was made. Buzzards date was a little hostile, and walked off into the night, or should I say early morning around 4 AM, never to be seen

again. Saying ï¿½Your all a bunch of phyisco cases, with your CB radios, and who can talk to another nut case called North Hollywood Eli, Iï¿½ve never seen such people, and another thing ....ï¿½

Buzzards Valley, was a hot topic at the coffee shop, when all the local CBï¿½ers got together. Important things like who had the most horse power, who could outpull who, and most important, who drank whoï¿½s beer, and who could hit North Hollywood Eli with the strongest signal, from their Jeep, where the main discussion topics. Ray and Jim the two local trouble makers just got a kick out of listening to the Buzzards Valley CB rescue effort, a truly rear event indeed. Maybe they thought there was enough antics without them interrupting.

Buzzard keep a pretty low profile after that, and after a few repairs his old car was running like new, except for the wrinkled right fender.

Buzzards Valley can be seen from the 210 Foothill Freeway going southbound only, between the Lowell Ave and Sunland Blvd. off ramps. If you look into the hills and see the worst weather beaten road that looks a like a fire break, at about 2 miles from the Lowell on ramp, ... is Buzzards Valley!

Thanks goes to Art, CB handle ï¿½Patrolï¿½ for refreshing my memory as the events of the Buzzards Valley incident. After all he brought the beer.

You would need a cavity filter and a duplexer It would not be very feasible.

Craig,
My Kenwood TS-520 tunes well outside of the 15, 20, 40 and 80
meter bands. It would be entirely possible for me to use my radio
outside of the allocated amateur radio frequencies. As a (grab your
dictionary, you may need to look up some works) RESPONSIBLE and
CONSCIENTIOUS amateur operator it is my RESONSIBILITY to ensure that
even though my equipment may be CAPABLE of operating outside of the
band, that I do NOT operate on unauthorized frequencies. I personally
see no reason why the possession of a 3 KW antenna tuner constitutes a
desire or propensity toward operating in excess of authorized power
levels. Most hams run barefoot on rigs running 100 watts output power
max. Some use older rigs putting out as much as 300 - 400 watts. The
large minority actually use amplifiers - and when they do I usually
hear power levels of 1 KW and no more. I don't think I have ever
heard anyone actually running at 1.5KW and I know I have never heard
anyone mention more than 1.5KW. That's not to say that it doesn't
happen - but it's rare, EXTREMELY rare. If I saw the need to operate
at full legal power and were shopping for an amplifier, I'd certainly
consider purchasing a 2 or even 3 KW amp for one reason. I would
assume that an amplifer running at 50% or 30% of its rated maximum
output power would run a hell of a lot cooler and last a hell of a lot
longer than one that was driven at or near 100%. Make any sense to
you? I figured as much...

Then you need to get a new meter. His meter detected a troll, period. Don't you think that something as dumb as a meter would register a 10 on, as you say, something as transparent as "ARRL's" post? Also, try using your spell check. When a person flames another but in the process misspells a simple word as "generous", they tend to lose all credibility.

Once again, someone (Troll or no) makes a comment about the dumbing down
that is occurring within the ham radio service and rather than meeting the
question straight on with reasoned argument, a ham comes to the rescue of
his service with the old "I saved a life through ham radio" dodge.
On top of all, you didn't see fit to take out all the other groups that
this message was cross-posted to. You are even more guilty of stupidity than
the person you draw attention to.

Sorry, thus far, no one has been able to do this. It is a 10 meter radio, designed ONLY for 10 meters, and works ONLY on 10 meters. Every-time someone has tried to "mod" this rig, they ended up ruining it or, at least, doing major damage.

Richard,

I truly appreciate your well projected thoughts on AM. As I said before, I am not a "frenzied" AM operator myself. However, I like to run AM some times just for "kicks" and something different. There are some of those guys that have really good-sounding AM rigs. One friend of mine who frequents 7295 has a military T368 he runs on AM. Boy! Does that thing sound great.

I am glad that the newer rigs DO include AM--not necessarily for operating, but for tuning and other nominal stuff. Civil Air Patrol has Motorola Micom II HF rigs. They do not have AM and *can* be difficult to tune or check SWR (screwdrivers, etc). To get around that, our CAP unit purchased an MFJ analyzer to tune the antenna. Works fine, but, sometimes it would be nice to have AM for certain things. I was hoping they would standardize on Kenwood TS50s because they are more frequency agile, etc.

Again, thanks for your input.

It's a common complaint among many amateurs that left CB in lieu of amateur
radio.

It's obvious that the majority of blame belongs with the ARRL since
the organization basically dictates FCC policy.

This will come as a major surprise in both Newington and Washington. The League and the FCC haven't agreed on a damn thing since 1951 that I know of.

It is interesting to watch the results of 'we are your voice in Washington' come home to roost. The ARRL has managed to piss everyone off.

With the average age of amateur operators ever increasing,

As is the country as a whole. Baby booms have that habit.

quoting an article suggesting that in ten
years amateur radio will be virtually dead from lack of interest and
inability to attract younger blood into the hobby, amateur radio least within
the HF spectrum will disappear.

As the band activity and number of tickets continues to increase. See http://ah0a.org

Without new operators entering the hobby and the means of obtaining reasonably affordable equipment the service is doomed.

As it has been periodically since 1927. Ham gear lasts forever. Buy an old FT101 from an ex-CBer if you want cheap.

Ask any twenty-something, if you had a thousand dollars to spend and it was
targeted towards an electronic purchase, amateur radio would be undoubtedly
be on the bottom of the list.

Yup, amazing how many people get in and out of the hobby as raises come, kids leave, and the dog drops dead.

So Great Swami, drop the other shoe and tell us what you would do about it. And for the sake of some, use the plain text option on your newsreader rather than HTML.

Hi,

Your post regarding responsibility expresses the crux of the whole matter. I, too, know of ham transmitters that *could* put out 5000 watts. Yet the particular one I am thinking of now has NEVER been run above the legal limit. Its owner usually loafs along at about 1200 watts. At this level, the transmitter is almost "bullet proof". It should last for many years this way. The "key" is, of course, is RESPONSIBILITY. It is knowing that bone crushing power is NOT the cure all, be all of communications. Most of the time, I run the 100 watt level on my IC706 in the mobile. I *could* use my mobile amp and go to 600 watts. Yet, it is not necessary, and being unnecessary, why do it if I can be heard just as well on 100 watts? I might be a DB down, but SO WHAT? The guy's hearing me. It's kind of like my car: I know it is governed to 125 mph (it's a sports car). I have no doubt that it WILL do 125. But it doesn't mean that I HAVE to go 125! I can drive at 55-60 and stay within the law. And with the amp, just because I *CAN* do X amount of power, doesn't mean it has to be used.

There are people that will never understand this. These are the ones that believe that power does it all, modded radios do it all, splatter-ing radios with "swing" do it all. Never mind that their radios are hard to understand, no, just so they are LOUD. It's the ego rush they get from "thinking" they are the biggest, Baddest, station anywhere. For them, responsible operating, respect for the law (which IS there for good reason), and consideration for others, is an ungrasp-able con-cept.

825. FS/Trade 2 SSB Radio CB's

Newsgroup: rec.radio.cb
Date: 2001-03-11 20:17:35 UTC
From: Stuart <s1j3@hotmail.com>
Message-ID: <98gmgupoh1@uranium.btinternet.com>
Source record: 75299

Hi
I have two SSB transceivers for sale/trade, they are both in as new condition
both are boxed and complete with all leads, brackets and manuals.

Modifications have been carried out by a Professional Radio Technician employed by Lowes Electronics in the UK (personal friend)

1--President Lincoln 25.000 to 30.000 MHz all modes, AM/FM/USB/LSB/CW.

2--Ranger TR-696F as above but 26.100 to 30.000MHz all modes inc Weather

I am asking £150.00p for each radio or £250.00p for the pair
that would be $220.00 each or $366.70 USD
I would also be interested in a trade for a base-HF Receiver 0-30MHz
must be good condition.

The benefits of Cobra's S/T can only be realized when talking to another operator who has a
Cobra S/T, the S/T function must be activated on both units.
It was a great marketing strategy for Cobra,but they did'nt tell the whole truth.
The Uniden DSC circuit is nothing more than a automatic squelch circuit, you can build a
similar circuit for almost any radio.
I prefer the "76" unit myself,the meter-less version is slightly more powerful.....
The "78" i tweaked swings 16watts forward w/a 3watt D/K,using a "69" final w/a "57" driver.
Good luck.....

Source record: 75302

For Sale- Yaesu 101EE with AM filter, YC601 Freq Counter, Speaker/Phone Patch, FV101B external VFO. Unit covers 26.5mhz-28mhz. The unit works well- it was just repaired 6 months ago and fully aligned. The face of the 101 has some wear marks on the painted lettering, the Speaker Patch is in good shape, the counter has a few scratches, and the VFO has a blemish on the model# tag. This radio works great on all bands and the output tubes are at full. It's not the prettiest 101EE- it does have a few nicks and scratches but it works very good. $625 shipped and professionally packed to anywhere in the cont. U.S. I may split it up at a later date- but not yet. I know everyone wants the counter and VFO- but dont make me any offers unless it is the full package. If I decide to split it up I will repost at a later date. Check pic out at http://members.aol.com/~jimmoci/ft101.jpg
Thanks!
Jim

Excellent, Dick. As far as the cost of the ham gear, do you know (I don't) what a Collins KWM-2 might have set you back in the mid 60s? If you adjust for inflation, I doubt ham gear has ever been cheaper.

Thanks for a good post (I still laugh over the ARRL and FCC) and 73 from Rochester,

Jim AA2QA

It's a common complaint among many amateurs that left CB in lieu of amateur radio.

It's obvious that the majority of blame belongs with the ARRL since the organization basically dictates FCC policy.

This will come as a major surprise in both Newington and Washington. The League and the FCC haven't agreed on a damn thing since 1951 that I know of.

It is interesting to watch the results of 'we are your voice in Washington' come home to roost. The ARRL has managed to piss everyone off.

With the average age of amateur operators ever increasing,

As is the country as a whole. Baby booms have that habit.

quoting an article suggesting that in ten
years amateur radio will be virtually dead from lack of interest and inability to attract younger blood into the hobby, amateur radio least within
the HF spectrum will disappear.

As the band activity and number of tickets continues to increase. See http://ah0a.org

Without new operators entering the hobby and the means of obtaining reasonably affordable equipment the service is doomed.

As it has been periodically since 1927. Ham gear lasts forever. Buy an old FT101 from an ex-CBer if you want cheap.

Ask any twenty-something, if you had a thousand dollars to spend and it was targeted towards an electronic purchase, amateur radio would be undoubtedly be on the bottom of the list.

Yup, amazing how many people get in and out of the hobby as raises come, kids leave, and the dog drops dead.

So Great Swami, drop the other shoe and tell us what you would do about it. And for the sake of some, use the plain text option on your newsreader rather than HTML.

Greetings!

Owning a 78, I would recommend Uniden with DSC versus a Cobra with ST.

The DSC simply controls squelch - does not affect transmit. And does
not have an effect on receive audio directly - no processing occurs.
Just control of the radios receive audio and muting. Doesn't change
the tone, nor the "wah-wah" that occurs when using the ST function on
non-ST transmissions - just a quieter receive.

Since it can be disabled, the DSC is simply an extra switch that can
be used to help receive, or work with something else.

Since you've owned a 66, the 68 and 76 / 78 series are *very* similar
and are considered by myself to be as reliable.

If you have a power mike on the old 66, the power mike will sound the
same on the 68 - hasn't changed a bit. Some minor changes are there,
but only due to revisions of parts that are no longer made or not
supported.

You'll be fine with a 68, can be re-worked just like the 66 - but I do
recommend the 78 if space and size is not a problem.

Depends on when you did the Collins thing. I have vague recollections of
The Day when Collins raised their amateur prices to match the government
ones. Seems someone in Sam's auditing shop objected strenuously to paying
twice the amateur price.

If memory serves a KWS1 was two grand in 1960 or so. The KWM2 was not
quite but close enough to that ballpark.

As this unfolds I keep hearing echoes of Wayne Green railing on incentive
licensing.

>
>And I feel that it's wishful thinking that these people are going to come
>around
>and start being more responsible on their own......

Thanks for your thoughtful post. I'm happy to respond. Yes, there is a lot of "expanded channel" gear in circulation. But the bright spot is that more and more people are aware of the potential for sliding into the ham bands if they don't know what the channel/band settings mean. And those who DO know are sharing the information with others.

For years, CB's unique version of Urban Legends have been passed from one person to another. Is it too much to hope that accurate information won't begin to filter through the pipeline? It would be great if truth spread as fast as myths!

>There's a lot of ignorance out there, fed by the pushers of illegal CB crap.

True. But today's CB crowd is better informed (in part, thanks to rec.radio.cb), and folks are realizing that they've been fed a lot of crap in the past. They get told one thing at the CB shop, and then find half a dozen people who tell them (independently) what's REALLY going on. You may have been able to lie to CBers in the past, but it doesn't wash, today.

>Many people getting into CB these days don't know what's legal and what's
>not.
>

Fortunately, there are plenty of folks who DO know. And I am very encouraged that they take time to help the newcomers understand the hobby. I wish I had time to compile an "honor role" of people who contribute to rec.radio.cb with the intention of helping others. It would be a long list, and the names would be very familiar to those who frequent this NG.

>Unfortunately in this
>case, the abuses of the few will result in the restriction of freedoms for
>the
>many.

You're right. The key is to recognize that it IS a few. Even in grade school, we had the "lightning rods" who brought down fire on all of us! (Remember the day the Principal cancelled recess because somebody set Mrs. English's book on

fire? Man, I felt bad about that! I swear it was an accident, and I hated that it affected you and the rest of the guys!)

>I know a lot of hams that would gladly trade a bit of difficulty in
>obtaining legit ham gear for the prospect of curtailing the spreading threat
>of
>bootleggers to the radio spectrum.
>

Well, the current Radio Shack 10-meter can't be modified, and it has not crimped anybody's style so far as I can determine. But if we somehow waved a magic wand and stopped all Export Radios on March 12th, and made everyone show a license before purchasing a ham rig, we'd still have a huge inventory which would continue circulating for many years.

The answer is education for those who don't know the rules or the potential for abuse of their equipment. And there always will be that few that are determined to do their own will, no matter what. We're making progress on the first part, and we'll never change the second. All we can do is try to contain them. Don't show approval for what they do, and don't make them "heros" for bucking society.

>Thoughts?

Just this......Nobody seems to be screaming about freebanders below and just above the regular 40 channels. Meanwhile, hams are jealously defending their turf from 28.0 MHZ upward. It doesn't take a rocket scientist to realize that CBers can stretch a bit, but don't force your way into parts of the spectrum where the occupants are organized, have private communication methods, and are friends of the FCC.

Even as a small child, I knew how far I could push my parents. Why do we think this has no application as adults? Duh!

QRM

Great Moments In TV History:
The skit called for Bob Hope to have his arms full of packages, while the beautiful starlet reached into his pants pocket for the keys. Unfortunately, she had difficulty finding them.

"I feel silly," she said as she fished around in the pocket.

"Go a little lower," said Hope, "and you'll feel NUTS!"

So how do you get water onto the brush if you don't dip it in the toilet? (I can't believe I said that!)

>11. The first product to have a bar code was
>> > > Wrigley's gum.

The last product to yield to mandatory bar code rules was Mad Magazine. After threats of law suits by the government, the editor finally allowed a bar code to appear. It was cleverly worked into the cover design each month. For instance, on the first issue, the bar code became a flag on a pole.

Selling a Comanche Warrior 10 meter base station. 450 channels in all modes including FM. Radio is completely stock except for frequency modification. Too other many features to list...radio is the same exact unit as the Eagle Tomahawk. Absolute mint condition. $125 shipped.

Where would the other 40 to 60 watts go? Ok maybe a tenth of a watt for the
swr meter light but the rest would go to heat losses. That's a lotta heat

There was a program called DTI out there, but i cant find a way to contact the guy since his email address isnt valid anymore. Was there any other software out there that would controll a CB's pll circuit like DTI? I would also be interested in the wiring configuration for a 148's mb8719 if anyone had it.

Thanks,
D

Tuneups can be done in the CW position but that requires a key doesn't it
:-)

While I do not mourn the passing of AM, there is something about good AM
isn't there? I catch Radio Spain now and again which has the best AM in
the business. Kind of like an SSK Mercedes or Duesenberg SJ -- things of
beauty however impractical.

Really good AM requires things like square-law response in the final which
is a whole lot easier with tubes than bipolar transistors. In fact AMing
a transistor final is awfully close to being an unnatural act in itself.
The clean crisp AM of years past is not likely to ever be duplicated
again. And, of course, a well-matched system from the mike to the mod
transformer don't hoit.

AM has gotten to the point on CB where we have a power mike whose effect
is reversed (with distortion) by the AGC in the mike amps and then clipped

to oblivion (with distortion) before application to the final with approximate results at best. Even before wire-cutter mods and idiocies like swing kits, it is guaranteed crap. Run it thru an amp that does not even draw on 180 degrees and is mismatched to boot, and you know the result. On the receiving end, it could be the guy in the next block or Saddam Hussein -- ain't no way to tell.

Back in the AM days on the ham bands there were people with so much clipping/compression that if they opened the door to the padded cell operating position you could hear toilets flush for six city blocks. One guy in particular would hit his PTT and of course the audio is wide open; all the relays sounded like an explosion in a junkyard and as the blowers to the unit came up you would swear the motors said Cummins on them. Beat the living shit out of every Roger Beep ever invented. And for the most part was done in a 6 kHz channel.

The low end of 20 (14.200 in those days) made today's bowl sound like evening vespers at the local church. Us poor boys didn't play in that sandbox. So I grew to like 15. Listening to some activity on 17 meters with the trusty Yachtboy has given me the hots to try that when we can get to the antennas. At the moment, we are enjoying the annual St Patricks day slopstorm in the Omaha area.

Actually, if you think for a minute (this may be difficult) ... you post doesn't make a whole lot of sense. Yes, amateur gear is probably easy to modify. After all, how far away is 11 meters from 10 meters (or 12, for that matter). Quite likely, a 10 meter amp will work fine, unmodified, on 11 meters. As far as the 3 kW antenna tuner - obviously you have never loaded anything past a store bought dipole, vertical, or yagi. A dipole for 80 meters CAN be pressed into service on other bands. If the antenna in question is NOT an odd number of quarter wavelengths, the dipole is NOT going to be anywhere near 70 ohms. Although you can use a 40 meter dipole on 15, other combinations will not work as nicely. This means your feedpoint may be several hundred ohms in impedance (likely you will use ladder line to feed it). This can result in very high voltages on the feedline AND the antenna tuner. You might also try feeding something with a very low impedance. This can cause high currents with correspondingly high voltages inside the tuner (things happen when you are transforming 50 ohms into 5 ohms or 1000 ohms. Interesting things). When I was on Guam we ran a lot of phone patches from KG6AAY and KG6NAC. No, we did not always use the linear amplifiers. There also is a fundamental difference between amateur radio and the intent of the 11 meter citizens' band. 11 meters is intended for local communications. If everyone ran the legal limit and no more, you would find the band less congested simply because the skip would be missing or weak and not interfere with talking 10 miles or more. Running phone patches for the guys on base from Guam back to the states does require a bit more power. 100 watts was usually sufficient for that. Back to the modifications - most amateur gear is intended to operate on a wide band of frequencies. Many transceivers now operate from 1.8 MHz to 56 MHz with some going all the way up to 440 MHz. These have the capability to operate virtually anywhere if someone has the mod for it. A single band unit may also be modded but, having never been intended to run beyond the one band, tuning circuits may prove a bit narrow to simply 'open up' the frequency synthesizer and obtain adaquate results without doing a lot of other modifications to the unit.

Maybe you should fill in all of the people selling HF gear there. It seems you know more about what goes on there then they do. I would bet you would die from the shock finding out who really atends the Hamvention, broken down by license class. By the way, have you really ever been there?

> Might I observe in passing
> that you are a classic example of the Tech in denial; a veritable poster
> boy.

Of course I would not expect anything different from you Richard. You are all ready on record, by your own words, a Tech Class bigot. The swipe above is just one more example of you showing your true colors.

> What you choose to do is up to you; you can become the resident expert on

The trap you seem to be stuck in is one of your own design. That I can't help you with.

> For the record. Anyone contemplating Amateur Radio is well advised to aim
> to take the General which includes a 5wpm code test and a pretty
> comprehensive rules and regs exam as well as the written for the
> bread-and-milk Tech.

That would be nice. However not everyone wishes to start there. I have tried to get two people interested in Amateur Radio where I work, no good so far. And that was after giving them old copies of QST, CQ, etc. showing all aspects of the hobby, such as contesting, DXing on HF, satellite work and so forth. They have also been invited to tag along to Ham Radio flea markets, visit some local Amateur stations, and so on. The best that happened is one guy got a study manual, and worked on that for a while.

> When it is all said and done, to play with an old Chevy Chase routine, I
> got the privileges and you don't.

But I have a lot more fun than you do, so I don't really care. 8-)) You along with many of the CBers on this news group sooner or later make the same mistake, that everyone is just lusting to get on HF, but can't be more wrong. Some of us could care less about operating on HF, but still have an opinion about CW testing never the less.

It was a joke, Jeff. There isn't a meter, and my message wasn't a flame.
And I certainly wasn't seeking "credibility" with nonsense such as this.

As for the fake meter, it isn't an on/off meter (on for troll, off for no
troll). It is a meter that rates a troll on a scale from one to ten. Since
this troll was so obvious, it simply doesn't rate very high as a troll in my

opinion.

However, since you control your own fake meter, you're free to rate the troll how you want. And I assure you that I will not hold your troll rating against you. [insert big grin here]

In the first place, the amplifier is not 100% efficient, nor are the power supply and voltage regulators. Further, every resistor in the rig consumes some power - although it is probably minute compared to the losses in the amplifier.

Yes, there is a lot of heat generated. Fortunately, most people do not transmit continuously, so there would only be around 20-30 watts of heat generated.

2001 Keydown Schedule. Is One Near You?

Group: rec.radio.cb Date: Mon, Mar 12, 2001, 11:30am (EST+5) From: yrac@aol.com (Yrac)
Does anyone have a web site of dates/places of the upcoming Key Downs?

Saturday, March 17. Annual St. Patrick's Day keydown. FCC Monitoring Station parking lot, Columbia, MD.
Ha! Not a problem. We do this on a weekend or Holiday, and we can pull it off no problem. We know work is the last place to find a government employee on a weekend or holiday. Guaranteed safe place.

Sunday, March 25th. 225 S. Main Street, Newington CN. (Look for building with lots of antennas). CN? What the hell is CN?
Oh, you mean "CT"? As in Connecticut? Oh. Is the building owned by someone on the bowl? Cool!

Sunday, April Fools. How could you? Columbine High School. (The name has been changed from "Key Down" to "Shoot Out".) I like warped humor, but why stop there? Why not Oklahoma, where you can get a bigger bang for your buck?

Dates for April and May have not been finalized
We are trying to get use of the Bush Ranch in central Texas, since the CBer-in-Chief has lots of good radio gear to show us.
The application for the Great Mississippi River Golden Arch keydown was rejected. It seems that the arch is resonant on Channel 19A and authorities are afraid that excessive RF might damage the structure. Running a roll of copper sheeting from the arch to the water (few hundred yards) will cure this.

However, they did issue a permit for us to gather at the Gateway Cemetary. (Apparently they got confused by the term "Dead Key").

Use the Boothill Cemetary in Daytona instead. No permit needed and the gals will bring us beer and show us their puppies from across the street.

Hey folks.... President Zachary T., going through Radio Shack
12V, 25mA lamps (272-1141A) a couple of times a year. Replacing this
lamp requires extracting the radio from its operating location,
opening up the case and desoldering/snipping the old lamp out and
soldering in the new. While not a difficult task, it's a pain in the
neck to have to do this several times a year. Wondering how I can
extend lamp life. I'm thinking of:

- 14 volt lamps. Where can I find them? eBay sellers seem to
want a lot for their 14 volt "grain of wheat" lamps.

- Neon lamps. Is there a 12 VDC neon lamp out there to
replace the 12 volt incandescent? What kind of duty life do they
have?

- Voltage dropping w/a resistor. What value resistor should
be soldered inline with the lamp to drop the voltage to something that
would produce a good extention of lamp life?

Any info would be appreciated. Thanks much...

Thanks for the help guys !

Forgot to mention, I usually only operate on SSB. My guess is that the duty cycle for the output power is much lower than AM or FM, as there is no continuously transmitted wave while the mike is keyed.

Richard.

Well said but you are pissing up a rope.

The crux of the man's argument is to justify illegality on the theory that ham's do it, too. This line of attack is generally dealt with by parents of preteens. The fuzzface and training bra set are very familiar with it. Whack, the old man explained across the side of the head.

You have opened the major difference between operation in CB and operation on the ham bands -- the multi-band nature of amateur radio. It is a concept which completely escapes a lot of the posters here. And with reason -- there is no experience with it.

And it is a two-way street. We get a major chuckle out of people who sweat a 1.3:1 VSWR but in single band operations you consider these things. Start with, as you have to in multiband use, the knowledge that the input impedence of the universe is 377 ohms and sweat near-field effects and no one gives rat tits about SWR -- that is why tuners were invented. When you optimize for a single band, the considerations come in a different order. Actually I have learned a bit here that has come in handy.

Consider our respective problems: You are one hop closer to Europe than I am but one hop further from Asia. So on 14 MHz and up, we are going to have different approaches to beam tuning. You get far more SW interference on 40. God knows on 30 meters. 80 and 160 are probably easier for me but more rewarding for you. Given the winters, neither of us is likely to be a great fan of quads. When I lived in Central Wisconsin, the ground conductivity was so bad that verticals were virtually useless but dipoles worked admirably at heights where strangulation of trespassers was a possibility. This is the kind of thing that single-banders never encounter. Jay has obviously been influenced by the winds of the Mojave, in the mid-Continent we get summer thunderstorms with tornadic winds plus blizzards and ice, Rochester we just won't talk about.

Had a good friend that went to Guam every summer with the Naval Reserve.
We got a lot of good war stories from KH2-land.

Sit back and enjoy the show, Jim.

Neons would require a dropping resistor anyway so you are no worse off
dropping the regular bulbs.

You want about a 2 volt drop at .025 amps. So if E=IR then R = E/I. R =
2/.025 or 80 ohms.
The nearest standard value is 82 ohms.

If W=EI you will have 2*.025 or about 0.05 watts to dissipate as heat so
the smallest convenient size should do the job.

Dick

You still get the biggest moose you can justify. With sideband you need
IR voltage drop about like Custer needed more Indians.

Just a rough estimate, but try a 1/4 watt resistor at 60 ohms. I have no idea what the actual voltage of your system is--probably about 14 volts, and am just guessing as to what voltage would not pop the bulb.

Thanks, Dick. Heck, I just looked over my previous post - did I say 56 MHz? Guess I just wanna freeband on channel 2 television... Actually, I had a brain cramp. I meant to say 54 MHz since I am going to leave channel 2 alone (I think channel 2 is in Buffalo). Best antenna I ever had was several hundred feet of end fed 8 gauge stranded wire. Fed that against mutiple grounding to six 8-foot ground rods plust the radiator in the shack (hot water heat). That old Johnson Ranger could load almost anything (ball point pen springs glowed a nice cherry red with RF!). I had a ball on 160, 80, 40, and 15! It did have an unusual pattern up on 15 tho ...

874. Joke of the day! "Playing Truck Driver"

Newsgroup: rec.radio.cb
Date: 2001-03-12 19:45:10 UTC
From: oneqck76ta@aol.com.com.com
Message-ID: <20010312144510.26254.00000674@ng-fa1.aol.com>
Source record: 75250

Little Billy (age 5) is sitting on his front porch steps playing a game.

With one arm he's holding a cat, the other hand is full of M&M's. To play this game, Billy starts at the top of the steps. He eats a couple M&M's, bites the cat, then moves down a step. He eats some more M&M's, bites the cat & moves down a step. When Billy gets to the bottom of the steps he goes back to the top and starts over.

Inside the house, Billy's mother is watching him. She sticks her head out the window and asks Billy what he's doing.

Billy replies, "Mommy, I'm playing Truck Driver."

Confused by the answer she has Billy explain how he figures he's playing Truck Driver. Billy replies, "I'm popping pills, eating pussy and movin' on!!"

Just a little humor a friend sent me. Hope you like!

Bringing up the topic of young people in the hobby, how many teenagers, middleschoolers, elementary school aged children do you HEAR on the ham bands? I am not talking about people licensed, I am talking about kids that actually talk and didn't get their licenses because mommy and daddy wanted them to/helped them to. Granted there are those kids that show an interest because of their parents. Mine had no idea what it was all about, I had to go out and do it on my own. I'm 17 and here in the Va/DC/Md area there are 4 of us that hang out on a repeater and have been doing so for a long time. That's it. No other kids we know of that are hams come down and talk hardly ever. And of course the older hams consider us not serious operators, in a joking sense though so no terribly hostility but it does get annoying to be referred to as "The Peanut Gallery".

Radio, Ham or CB, is something you get into as an interest with maybe a little bit of background. You can't just walk up to anyone on the street and say "Hey, become a ham!". It would be great if it worked like that. I was recently asked by a non-ham/non-radio enthusiast why we need stuff like amateur radio. Wouldn't it just be easier to use the internet in an emergency? That's the mentality of a point and click world.

Just my two cents.....

884. Report on the Meeting between BCBC and the RA.

Newsgroup: rec.radio.cb
Date: 2001-03-12 21:41:47 UTC
From: Skidrow <skidrow@alki.karoo.co.uk>
Message-ID: <taqgqb1smr910a@corp.supernews.co.uk>
Source record: 75259

Report on the Meeting between BCBC and the RA.
12th January 2001 at King Beam House.

Report Compiled by David Harding, BCBC Treasurer.

1) No deregulation for the time being, though it is distinctly on the horizon. Current license figures are down to 30,364 which is approaching the platform below which it won't be economical to run. Licenses are now free to over-75s.

2) UHF has been thoroughly investigated, and cannot be implemented for CB at the moment - if ever. The problem has been looked at in detail, trying to find a spot on the spectrum which they could give us - and they say that there aren't any. Even if one could be found in the UK, they have to make sure this would harmonise with the other European countries, which could take years. I pressed them about 70cm, and the slot we were asking for. From the extremely cagey answer they gave (which I tried to draw them on, significantly without success), it sounds as if the Amateurs are going to lose that slice as well. I mentioned Delboy's suggestion, and they laughed. It is, as Delboy well knows, on the police band, and even if they stop using it or change to digital, they will probably hang on to the band for other uses (surveillance etc.) In any case, we have the harmonization problem again - this frequency is used for other purposes all over Europe.

3) AM/SSB - it looks as if this is a distinct possibility on 27 MHz, but they have taken nearly a year to complete their tests and compiled their final report. However, I pressed them on what the draft report contained, and they said that it recommended AM/SSB subject to the normal CB restrictions on power, aerials etc. But again, once the report is completed and issued, it then has to make its way through Government channels before it becomes law, which could take ages, especially with an election coming up.

4) Data was discussed, and whilst the RA are fully prepared to go ahead and recommend a one-to-one system, and the Trade have confirmed that the necessary equipment is being manufactured abroad and can be imported in a matter of days, they have been held back by three factors. One is a survey of licensed CBers - 25% were in favour but a large 63% were against (not just don't know or don't care" but dead against it). They also took a show of hands at the CB Forum at Edinburgh, and found a similar lack of enthusiasm. They infer that if they allocated three frequencies for data on 27 MHz, they would probably be jammed out by those not in sympathy with the idea. Two, they asked what reaction we had had from our own members. George was forced to report that, although we had asked the membership for their opinions, we had had precious few replies - the great god Apathy was

at work. We had also taken a survey at the CB Forum at Cleethorpes, and had also met with a similar lack of enthusiasm. This did nothing to reassure them. The third factor was the pressure BCBC and the Trade (led by Sharman's) were putting on them to have a full Packet system, rather than a Data system. They were not totally averse to this, but if it were decided to go for Full Packet, all the groundwork would have to be gone through again (taking months). I said, surely most of the groundwork for Data would apply to Packet, so it might be done in a few days. I emphasised that BCBC desperately needed to score what might be seen as a success in winning something for CBers - a few brownie points would bring new members flocking in. As things were at present, we have almost nothing to announce in public to show what we have succeeded in winning for CBers, and the majority of the licensees (as well as almost all the non-licensed CBers) had little confidence in our abilities. Going back to Packet, I made two strong points - one is that youngsters find the Internet speedy and efficient, they would find Packet a reasonable radio connection with the added attraction of mailboxes and being able to send messages across the country, but they would find Data slow and boring and only of use for extremely short range connections. The other is that Radio Amateurs are already getting bored with Packet and turning to other things, so CB would be coming in on an already dying mode, and only offering a small sniff of it into the bargain.
I also pointed out that we had had extensive communication with pirate CBers from as far away as Holland who were already operating a full packet system across the UK and Europe, and anyone interested in it would be likely to go illegal and join them. I asked if it would not be better to give in to these people, and make them legal - it might persuade them to buy licenses and use correct call-signs. They could not take this seriously - they said that so long as CB was a licensed service under their jurisdiction, anyone who broke the rules could not be considered.

4) Martin Caine was at the Meeting, and he outlined the new scheme for Radio Amateurs, whereby there would be three classes - Advanced, Intermediate and Foundation. From what he said, it sounded as if he wanted to attract the more experimental CB operators to become Foundationers, and leave the rest of CB to die out naturally.

5) The next RA Forum is likely to be in the Bristol Area, and will probably be a combined Forum for Radio Amateurs and CBers jointly.

I think this is most of the points we made - it was a very friendly meeting, but we haven't come away with much more than we went in with.

The only information I have found for the HA-13, states that it is an internally mounted VFO kit for either Hallicrafters' CB-3A or CB-17 radios.

Heck, when I was in high school, there were a few of us active. We usually hung out on 15 meters - either SSB/AM or - get this - we had the 'Rochester Peanut Whistle Net'. That net met on 15 CW (I forget which night) and all were welcome. Generally, the older set stayed away. Probably since many of them were also 'appliance operators' and at least a few had memorized questions and answers (sound a lot like the complaints of today?). Interestingly enough, today the complaint is that no one wants to know CW. Back then, the Peanut Whistle net was CW - and methinks a bunch of the older folks stayed away because although the net usually ran at 20 WPM (for me since that was the best I could muster at the time), I suddenly found CW easy and the net moved on up to the mid 30s. All of the gang on the net could go considerably faster - I doubt anyone would have had problems with 40, but it wasn't intended as a speed contest. It was a fun thing but you can't say a whole heck of a lot at 10 words per minute. My parents weren't into communications nor electronics, but did support me. I memorized the code on my own and passed the novice license in 1962. Since I had memorized dots and dashes, I ran into the same problem as most - I failed my general twice and didn't pick up the general until 1964. It was shortly thereafter that I started enjoying morse and my speed picked up from the 18 to 20 range up to around 50 in a short time. I took (and passed) my commercial telegraph ticket and my amateur extra in 1966 on the same day (around the same time I obtained my 1st class radiotelephone license). Yes, one has to have an interest in communications. As far as the internet goes, don't worry. If the phone goes out (or cable), they can just call the telephone (or cable) company. LOL.

73 from Rochester, NY
Jim

You can also cut J-9 which is just a plain bare jumper wire located on the front of the board behind the meter. You can then run a wire from each side of the J-9 to a switch.

very well, but I have a hard time understanding the statement (I've not heard a station using 1.5 kw) can you actually tell how many watts a station is using by looking at your s-meter, or are you going by want the operator is telling you? and also just like it is illegal for a 11 meter operator to have a device capable of over the 4 watt level, the same should be held in the the amateur bands anything capable of a out put of over 1.5 kw should be illegal to, if you have a amp capable of 2kw-to 3 kw, like you state you would run better at 30% to 50 %, how do you stop at 1500 watts , if you go to 1501 your illegal right,I know this is childish, but this is the logic you get from some of these radio gods in here, your statement that you have a kenwood radio that will operate on all bands ,even if you are not licensed to use these bands, and that you obey the laws and do not used these bands, my question is why do all these ham gods in here assume that every 11 meter operator using a galaxy, rci ect. radio is operating out of the 11 meter band , these radio's are (not) illegal to purchase just call a.s.e and ask them , people in here are assuming all this, how would you feel that just because your radio can transmit out-side what you are licensed to , that you are. take care and God -bless to you and your family.....

They are no less illegal for doing so -- their gear is not type-accepted for the purpose. In fact ham gear is not type-accepted at all outside of linears.

Are there guys with ham licenses on 11 meters? Of course. I would suspect most of them are Codeless Techs but not necessarily. It is a different form of radio, not necessarily inferior just different.

There is not a ham or anyone else with r.f. in his blood who has not broken a rule or two along the way, sometimes inadvertently but often with cold deliberation. But it is generally not a way of life nor is it justification for anyone else; 'everyone else is doing it' generally is outgrown somewhere about the time one learns what a razor is for.

I have talked to a few CB outlaws as well, not always honoring the rule about not talking with them. On one notable occasion when I lived in St. Louis we were holding our Prevert Net (leading the world to greater heights of preversion) on 28.600 when ten was deader than dirt. To our surprise we were broken by a couple of dudes out of Arkansas; it was a major surprise to me because I was on a 7/4 vertical at the time with a radiation pattern approximating straight up. As things developed we discovered that they had bought the crystals and sure as hell intended to use them. So we gave them official callsigns, WA5QLF and WB5LID.

The world is often a bit dreamy -- so take up enjoying the surrealistic.

As much as this might be a surprise to you, I do not own a linear and
never have in 46 years.

On several bands and sub-segments we have a 200 watt limit that is rarely
broken. Until you get the Extra it is a virtual lead-pipe cinch that you
will have a radio capable of transmitting outside of your license class.
While the fact that everyone has access to QRZ.com may have a bit to do

with it, this too is rarely violated.

By and large we are a pretty respectable bunch. Whether the rules 'should' say something or not, they don't -- generally because there is no need to. On the other hand, the high end of 75 has been a cesspool for as long as I can remember and more than likely before.

At least in my case, if you keep it below 28 MHz I really don't give a damn.

One more thing.....most 20 amp supplies are not rated 20 amps continuous, but rather 20 amp surge. I ran a 2970 for a bit on a 20 amp, and got terrible results on sideband with the rf power open all the way. These radios are advertised at 100w on ssb and cw, but actually are capable of more like 150w. If you are considering running this thing on a power supply, please do yourself a favor and go with a 30-35 amp supply. It's not that much more money, and you won't have to worry about the supply heating up or starving the radio. You'll be glad you made that investment.

Randy

I agree. Keep in mind that 2970s have two 2290s in their output stages.
A 2970 is like a 148 driving an inefficient 250--and you have to power
both units from the same supply.

An Astron 35, a Tripp-Lite 40, or a chinese (everything but Astron and
Tripp-Lite) 50 is the minimum that is required.

At 12 V (DC or AC) neons won't light.... takes a lil' over 60 volts to light
'em up and that probably wouldn't do the rig any good. :-)

Recently my fuel gauge on the car has been sticking.
I think that there is some moisture in the pivot or spring that is freezing
and producing this effect.
Do you know of a way of freeing it without removing the dashboard?

bullshit, no way in gods green earth a 2970 pulls 35 amps while only doing 100 watts or even 150 watts I am sure they are peak watts at that ..13.8 x 35 amps = 483 watts ..how in- efficient is the 2970? Plus it has 2-2290's they normally draw about 15 amps max for the pair..

Looking for Raytheon, Apelco, and Webster CB radio equipment
for my personal collection. I need the following models (but
I will consider any others as well):

Raytheon:
Tube-type: Raycom, Raycom II
Solid-state: Raycom III, Raycom IV, Ray-Tel TWR-9, Ray-Tel TWR-11
Hand-held: Ray-Tel TWR-8, MW-2, Regal Ray-ette, Super Ray-ette

Apelco:
Tube-type: AR-9, AR-10

Webster Bandspanner:
Tube-type: 411 (labeled "Four-Eleven"), 412
Solid-state: 550

Visit my Raytheon CB radio web site:
http://www.qsl.net/k5dh/raytheon.html

73,
Dean, K5DH

Dick,
Okay, the math definitely checks out.... I had come up with
the same but wasn't sure if a 2 volt drop was enough or if it was too
much. I'm assuming that at 10 volts I'd still have approximately 83%
of the brightness at 12 volts - or is this not linear?

Thanks!

Hmmmm, probably not - unless I ungrounded the antenna on my TS-520 and
keyed up a steady CW tone... Then again, that probably wouldn't do
the TS-520 much good either... ;)

You bring up a good point... I should actually measure the voltage
next time I have to replace the bulb. I had assumed it was 12 volts,
but never verified. Just never occurred to me that I would want to
plug the thing in and power it up with the cover removed... ;) Time
to stop being chicken I guess...

I was trying to shoot at about 11 volts. The right answer is going to be between 60 and 100 ohms, depending upon the actual volatage at the bulb. Look in your junk box for a resistor anywhere in this range and it should work, but the higher the value, the dimmer the bulb, so you need to find a happy compromise between bulb brightness and voltage drop.

Your logic is somewhat flawed - and you seem to be misinformed
about a few things. First of all, nothing states that it is illegal
for a CB operator to possess equipement that operates outside of the
CB band. It is, however, illegal to USE non-type accepted equipment
on the 27 meter band. It is also, illegal for anyone to use equipment
that was FORMERLY type-accepted and subsequently modified in the
transmitter section in ANY way. This includes, but is not limited to,
adding frequencies, changing frequencies ("opening" the clarifier on a
SSB rig), changing (increasing) power output levels, or altering the
modulation limiter. It is not the possession of the equipment that is
illegal, it is the USE that is illegal.
The REASON (and it's a good, solid, technical reason) my
Kenwood will operate outside of the ham frequency allocations on 80,
40, 20, and 15 meters is due to the large allocation of frequencies on
the 10 meter band. The 10 meter band authorizes operation from 28.000
MHz up to 29.7 MHz. My radio uses a single VFO to tune across the
band with a 600 KHz range. The band selector puts me in the
appropriate band and I tune across the band with the VFO. So, in 10
meters I have one range from 28.000 to 28.600 MHz. I have another
from 28.500 to 29.100 MHz, and finally another range from 29.100 to
29.700 MHz. This gives me tuning and transmitting capabilities across
the entire 10-meter band. HOWEVER, since the same VFO is used to tune
across ALL bands, I also have the same 600 MHz operating capacity

across the 15 meter (allocated 21.0-21.45 MHz), the 20 meter (alloctaed 14.0-14.35MHz), 40 meter (allocated 7.0-7.3 MHz) and 80 meter (allocated 3.5-4.0MHz) bands. As you can see, the VFO will permit the radio to operate anywhere from 1.5 MHz to 3 MHz outside of each band. The only way of designing the radio to NOT allow out-of-band operations would have been to add a seperate VFO for each frequency band, an option which would have added incredible cost, weight, size, and complication disadvantages to a radio that debuted in 1972. Newer rigs, with synthesized tuning may very well be able to program out disallowed frequencies - I don't know, I'm not fortunate enough to be able to spend one, two, three or more thousand dollars on a radio. It's up to me as a (here we go with those words again) RESPONSIBLE and CONSCIENTIOUS amateur operator to observe the limits and abide by them.

To answer your question... I go by what the operator states when judging power levels. You are correct, I am taking a person's word, and have no equipment here to measure the power field of a station operating several hundred to several thousand miles away. When an operator says he's operating at 1,000 watts, I have to take his word for it, the same as I so when some CB'er in the next town over is bragging about his 500 watt linear. What can I say... I tend to take people at their word until they've given me good reason to believe that they are not telling me the truth.

Regarding regulating the power on an amateur's amplifer, it is the responsibility of the operator to monitor power output levels. If it can be proven that an operator consistently and either purposefully and/or negligently operates at even 1 watt beyond legal limit, that conduct is actionable by the appropriate licensing authority and I support any action by that authority. In my mind, 1501 watts (definitively proven and shown as part of a pattern of operating practices) is as bad as 2500 watts. Most RESPONSIBLE (there's that word again) operators will tune their rigs for a specific, known maximum output which they are confident will not be exceeded... For example, in CW operation it is very easy to set that upper level as the signal is either on or off. In SSB work one must be more careful in monitoring the power meter as signal output is dependant on audio input - but even then, with a strong dummy load, one can adjust the amps by sending a relatively strong audio tone into the mike with the rig transmitting into the dummy load.

Regarding the flaw in your logic.... For what good reason would a CB operator possess equipment for operating outside of frequency allocations and power limitations when the use of such equipment presents an illegal act? The very act of using a radio that has been modified to operate "outside of the envelope" is illegal, even if that radio is being used on legal frequencies and power settings. The use of non-type accepted equipment is ILLEGAL in the CB bands in the US. The modification of equipment VOIDS the type acceptance. How could it be any more clear-cut? Sure, the PURCHASE of a Galaxy or an RCI may not be illegal... The POSSESSION of a Galaxy or an RCI may not be illegal... But the USE of this equipment

on the 27 meter band IS illegal.

Isn't linear at all and 2 volts may be too much. I used two because it was about like using 14 volt bulbs. One guy suggested sixty and that may be the place to start. Depends a lot on how bright you like your S meter.

More likely it's the "sending unit" located in the tank.
Overfilling-"topping off"- the tank excessively can cause this.
Sometimes it has to be replaced to correct the problem.

Dick

If you have a 40ch sideband CB radio made by Tram, Cobra, Browning, Uniden, President, etc. I would be interested in purchasing it. Working condition is not important as long as it is cosmetically good. Get rid of that dust collector that you are never going to use. Payment by money order, no complicated nonsense here. Let me know what you have. Thanks. Email Wasupdare@aol.com

Your logic is somewhat flawed - and you seem to be misinformed about a few things. First of all, nothing states that it is illegal for a CB operator to possess equipement that operates outside of the CB band. It is, however, illegal to USE non-type accepted equipment on the 27 meter band. It is also, illegal for anyone to use equipment that was FORMERLY type-accepted and subsequently modified in the transmitter section in ANY way. This includes, but is not limited to, adding frequencies, changing frequencies ("opening" the clarifier on a SSB rig), changing (increasing) power output levels, or altering the modulation limiter. It is not the possession of the equipment that is illegal, it is the USE that is illegal.

The REASON (and it's a good, solid, technical reason) my Kenwood will operate outside of the ham frequency allocations on 80, 40, 20, and 15 meters is due to the large allocation of frequencies on the 10 meter band. The 10 meter band authorizes operation from 28.000 MHz up to 29.7 MHz. My radio uses a single VFO to tune across the band with a 600 KHz range. The band selector puts me in the appropriate band and I tune across the band with the VFO. So, in 10 meters I have one range from 28.000 to 28.600 MHz. I have another from 28.500 to 29.100 MHz, and finally another range from 29.100 to 29.700 MHz. This gives me tuning and transmitting capabilities across the entire 10-meter band. HOWEVER, since the same VFO is used to tune across ALL bands, I also have the same 600 MHz operating capacity across the 15 meter (allocated 21.0-21.45 MHz), the 20 meter (alloctaed 14.0-14.35MHz), 40 meter (allocated 7.0-7.3 MHz) and 80 meter (allocated 3.5-4.0MHz) bands. As you can see, the VFO will permit the radio to operate anywhere from 1.5 MHz to 3 MHz outside of each band. The only way of designing the radio to NOT allow out-of-band operations would have been to add a seperate VFO for each frequency band, an option which would have added incredible cost, weight, size, and complication disadvantages to a radio that debuted in 1972. Newer rigs, with synthesized tuning may very well be able to program out disallowed frequencies - I don't know, I'm not fortunate enough to be able to spend one, two, three or more thousand dollars on a radio. It's up to me as a (here we go with those words again) RESPONSIBLE and CONSCIENTIOUS amateur operator to observe the limits and abide by them.

"I agree. Same can be said for cbers. We are responsible for our own actions. Another op is NOT responsible for what I do, nor does another have to answer for my actions."

To answer your question... I go by what the operator states when judging power levels. You are correct, I am taking a person's word, and have no equipment here to measure the power field of a station operating several hundred to

several thousand miles away. When an operator says he's operating at 1,000 watts, I have to take his word for it, the same as I so when some CB'er in the next town over is bragging about his 500 watt linear.

"Your examples are extremely biased. Did you do this intentionally? What about the op in the next town who is running ANY amp? Would you not consider HIM to be bragging?"

What can I say... I tend to take people at their word until they've given me good reason to believe that they are not telling me the truth

"So do I. Unless they are heavily biased, then their word rapidly loses merit."

Regarding regulating the power on an amateur's amplifer, it is the responsibility of the operator to monitor power output levels.

"Again. Same can be said for a cber IF he is running extra power. And don't tell me it can't be done responsibly."

If it can be proven that an operator consistently and either purposefully and/or negligently operates at even 1 watt beyond legal limit, that conduct is actionable by the appropriate licensing authority and I support any action by that authority. In my mind, 1501 watts (definitively proven and shown as part of a pattern of operating practices) is as bad as 2500 watts. Most RESPONSIBLE (there's that word again) operators will tune their rigs for a specific, known maximum output which they are confident will not be exceeded... For example, in CW operation it is very easy to set that upper level as the signal is either on or off. In SSB work one must be more careful in monitoring the power meter as signal output is dependant on audio input - but even then, with a strong dummy load, one can adjust the amps by sending a relatively strong audio tone into the mike with the rig transmitting into the dummy load.

Regarding the flaw in your logic.... For what good reason would a CB operator possess equipment for operating outside of frequency allocations and power limitations when the use of such equipment presents an illegal act?

"The flaw is in YOUR thinking. As YOU stated, there is no law prohibiting a cber from owning such type equipment. END OF STORY. What constitutes 'good reason' to YOU is irrelevant. One can't carry an uzi in the grocery store, but that doesn't mean you can't own one."

The very act of using a radio that has been modified to operate "outside of the envelope" is illegal, even if that radio is being used on legal frequencies and power settings. The use of non-type accepted equipment is ILLEGAL in the CB bands in the US. The modification of equipment VOIDS the type acceptance. How could it be any more clear-cut?

"No argument there. As long as it doesn't void the warranty."

Sure, the PURCHASE of a Galaxy or an RCI may not be illegal... The POSSESSION of a Galaxy or an RCI may not be illegal... But the USE of this equipment on the 27 meter band IS illegal.

"Agreed. Why should this concern you?"

Greetings!

Nope - I'm not kidding, a tuned unit that uses either 2879's, or SD 1446's will take a minimum of 30 amps - and when properly tweaked, can be made to swing above 150 watts RMS for SSB use.

The one I have the joy to check out did close to 200 watts on SSB.

These things have a push-pull amp in them, and are 2-pill.

Greetings!

Try 3 diodes in series, a standard 1N4001 should do the job, each diode will drop about .5 to .6 volts across itself - and this should give you the 12V you need.

The light output will be dimmer, but if you want even a longer life try 4 or more diodes. The diodes won't heat up as they drop the voltage across their junction. So you don't have a dissipation problem.

Diodes, can be a bear but they do have an inherent voltage drop without the current problem.

Neon bulbs need more than 12V to fire and work. They use a dropping resistor.

Have you tried looking for an LED in white? They are for sale out here and operate in the 12V region to replace the bulb permanently, might be a better alternative for the money and hassles of changing incandescent lights all the time.

On Mon, 12 Mar 2001 14:52:09 GMT, while the modem was ice fishing with the Mouse, KAXN-9546 <ab2hr@arrl.net> dissertated the following:

:+> Hey folks.... President Zachary T., going through Radio Shack
:+> 12V, 25mA lamps (272-1141A) a couple of times a year. Replacing this
:+> lamp requires extracting the radio from its operating location,
:+> opening up the case and desoldering/snipping the old lamp out and
:+> soldering in the new. While not a difficult task, it's a pain in the
:+> neck to have to do this several times a year. Wondering how I can
:+> extend lamp life. I'm thinking of:
:+>
:+> - 14 volt lamps. Where can I find them? eBay sellers seem to
:+> want a lot for their 14 volt "grain of wheat" lamps.
:+>
:+> - Neon lamps. Is there a 12 VDC neon lamp out there to
:+> replace the 12 volt incandescent? What kind of duty life do they
:+> have?
:+>
:+> - Voltage dropping w/a resistor. What value resistor should
:+> be soldered inline with the lamp to drop the voltage to something that
:+> would produce a good extention of lamp life?
:+>
:+> Any info would be appreciated. Thanks much...
:+>

What's commonly sold as a "20 amp power supply"
won't cover a tuned up 2970 on SSB without a buffer
battery.

It's about headroom and longevity.

939. Tram Diamond 60 Nearly Dead

Newsgroup: rec.radio.cb
Date: 2001-03-13 21:01:21 UTC
From: Fred and Carolyn Krick <n7fk@citlink.net>
Message-ID: <3AAE8A9B.46EE315A@citlink.net>
Source record: 75414

I am the proud owner of one of the real classic rigs of the golden years of CB. I bought the Sams Book (CB 62) for the rig with the intention of repairing it. It seemed like an easy fix, since the PA functioned normally, and the receive and transmit were dead. Wrong! I have found a couple of errors in the Sams book, and very little to go on for troubleshooting. All the voltages shown are present. The synthesizer has 50 mv. peak to peak out, according to the book, the radio should be working, but there isn't even transistor white noise at the speaker terminals. The 455 IF is okay, by injecting 455 khz is the only way to get the meter to move. There is enough output to hear the transmitter in all modes on the service monitor, but very weak, unhook the coax and it is gone. It is like the whole receiver and transmitter are biased off, but the 8.11 volts receive is present everywhere I look. This rig is unmodified, not even the paint seals are broken! If anyone has any ideas, sure would appreciate a hint!

THanks,
Fred

Gary:

If you were anywhere south of 51degrees North Latitude, i would say that the problem may be the sending unit in the fuel tank. It is a mechanical/electrical device in which a float ball moves on an arm, which in turn varies the resistance in an electrical circuit feeding the meter.

In your situation, it COULD be a problem with the meter freezing. Does the sticking occur (or not occur) depending on temperature?

The key to this discussion seems to be whether the unit is "tuned up".

My stock RCI-2970 calls for 20A fuses. My FT-890 (also rated at 100W) calls for a 20 AM supply.

But if someone has peaked the RCI-2970 for more power, obviously it has to come in the front end. So, once we define our terms (tuned or stock), we should be able to find the correct answer.

For stock radios, the answer appears to be 20A.

I have a Pierce Simpson Bengal 23 channel SSB/AM base station for sale. It is in decent condition, comes with 3 prong mic, has AC/DC power, I don't have the DC cord though. Has PA and external speaker jacks, takes standard PL259 antenna. I can reach PA turnpike no problems (about 7 miles) on a K40 mobile antenna from my basement, but the unit probably DEFINITELY needs tuned (I am assuming) about a 7 cosmetically but everything is there and works ok. Has S/RF and Mod. meter

I want to get into 2 meter so I am selling my old gear.

asking $75 obo

Please email inquiries

A good troll gets people upset enough to respond. A great one gets
complaints to various organizations and federal agencies.

Since most people just transmit for short periods can u get a larger amp
then the alternator pumps out and consider the current drain during transmit
kinda like the drain from the starter motor. As I remember series wound dc
motors use more current the slower they spin and produce huge amounts of
torque with huge current draw. Therefore can you use a large amp and just
let the battery charge back up after saying AUDDIIOOOO:)

Two meter repeaters are not representative of most hams - especially in any
major city. Try working some two meter SSB, or better yet, spend some time
on HF. You will find a completely different type of operator.

No wonder people sell "illegal" radios on CB newsgroups! In the regular
amateur market, these things NEVER sell for more than $300.

Apparently some members have sent e-mails to the FCC with the same name as the "rat-out" crowd.
Some of the e-mails have been : alien ham gear STOLEN from area 51 being sold on rec.radio.cb.
The fcc is getting TONS of e-mail telling them that the following is being sold here: Norad radar modified for 11 meters, encryption gear, Nike missles w/ warhead to win keydowns with EMP damage to competitors, illigal radio gear from apollo 13 lunar lander, same for shuttle challenger, VOA gear modified for 11m, Various alien items, an entire stealth bomber!, The radar dish from the USS Enterprise modified fro 11m, The radar dish from the starship USS Enterprise is aslo reported as being sold here. I am sure the fcc will spend the time and effort to hunt down the real sale items so keep sending them e-mails boys! Ha Ha Ha

A thought:

I believe you can operate an amp successfully on a lower
voltage than the radio. If you can keep the radio from seeing the same
voltage drop that the amp initiates then why not run a big amp on a
standard alternator. Especially if the duty cycle is low as it is on
uncompressed SSB.The amp won't put out as much but it will still put
out.

A method of accomplishing the no voltage drop at the radio is
to hook up a second battery for the amp only. Use the standard large
gauge wire to feed the amp but only tie the secondary battery to
the charging primary battery by the use of a restricted route. A
restricted route could be any combination of a smaller gauge
longer length wire for the purpose of slow charging but not allowing
great current flow during transmit.

The ideal charging wire would heat up and increase a voltage drop
during transmit in order to isolate the radio from a voltage drop.

Has anyone tried this?

I'm not one of the "rat out" crowd, but I can tell ya what FCC DID do.
according to Rain Report. They nailed somebody for unlicensed operation
on 10 meters. Didn't give a name, but it'll probably be revealed later.
They might not jump 10 feet high at every email (I think flooding them
with email is a bad idea because it equates with the boy that cried
WOLF and makes them even less inclined to respond), but they DO respond
to SOME things.

I kinda agree with you. As long as the amps and modded rigs are kept
within the 40 channels, FCC couldn't care less. I do think, however,
that the fellas who are straying farther and farther afield onto fre-
quencies and bands they have no business on are going to attract the
wrong kind of attention sooner or later. Just as the complaints of
constituents to their senators/reps brought on the "local" enforcement
thing (effectiveness of which remains to be seen), their activities
will cause complaints from other radio users/services that *could* bring
on unforeseen results--to the detriment of all. Again, as far as the
regular 40 channels is concerned, I think the "snitches" are wasting
their time. The only things that WILL happen (eventually) will be to
the bold ones who "bootleg" on others' frequencies. Sooner or later,
they will step into a trap. JMHO.

From: Mike Yetsko <joe@user.com>
Message-ID: <tate3scte9d1c0@corp.supernews.com>
Source record: 75437

You can get 14v lamps from a number of sources.

But, since the 12v lamps are 'on the wall', just put one or
two diodes in series with them. Each diode (use a 1N4001
or whatever is cheap) will drop about .7v in series.

The old crystal scanners used to pop bulbs all the time.
14v bulbs would pop with time. 12v from the wall in a
month or two. I used to use the diodes and the bulbs would
last a LONG time.

Sure you will, W6DKN. Have you been to 3.860 MHz lately? The two-meter operators are not any better or worse than any other ham. I take that back, at least the two-meter operators don't usually go around promoting bigotry towards their fellow hams.

So, if you know where the jerks are, why waste your time there? At least they occupy a small, known piece of the band so the trash is easy to avoid - unless you're the type that likes this stuff. (Yes, I have heard about the crap on 3.860, but I have no desire to waste my time with it)

Personally I prefer to work DX and do very little stateside work (which seems to be where most of the problem operators are on HF). I work 12, 17, 20, and 40 almost every day and I have never had anything but great QSO's. I do work VHF/UHF also, but I only do SSB or FM simplex and SATS. There are very few "garbage operators" in these modes.

At least on HF, the jerks stay in a small, relatively consistent spot and it is fairly common knowledge where they are, so they are very easy to avoid. Very different than the VHF repeaters in the big cities, where the jerks get their kicks from going from machine to machine to see what trouble they can cause (just like 11 meters).

I am going to do one thing in my life to act like the man that I am. I am going to admit once and for all that I am a pathetic loser. There are other patetic losers on this group that are not man enough to admit it but darn it, I am. I have no business being on a NG whose topic I know nothing about. Being the loser that I am though, I have nothing better to do with my life than bug CBers. I am a Ham so therefore I know everything there is to know about CBs or at least I think I do when I have all my ham/FLRC loser friends to back me up. I am king, damn it, and it is time that you CBers acknowledge the fact and do as I say not as I do. I am here as an FCC Rat and take it in the rear like a real man. One of these days I will actually get a CB to see if it is as bad as I tell everyone that it is. If you have any questions, feel free to e-mail me because I am a ham and know it all. Just remember to thank me for allowing all you pathetic idiots to post on this NG. Did I forget to tell you that I also own this NG? Have a good day hahahahahahahahaha!

That thought had not eluded me, however the gauge remains pegged when the
ignition is switched off and thus power is removed from the instrumentation.

Thank you for you response.

From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <trhuat0odde49hagqndd364e30ith9i0q3@4ax.com>
Source record: 75605

Greetings!

You do have a point, and what makes this tough is, to rack my brain over the deal. Can't remember everything about the radio - but it was a piece of work - literally. It's been close to 5 years, see below.

All I do know, is the requirement for this 2970 on the bench, needed a 40 amp fuse to hold.

The low power setting took nearly 12 amps to simply use SSB. Going to high power required the use of a p/s using a battery back up to offer the current. Didn't have any p/s large enough to hold it steady without using batteries to hold the draw.

Putting it on a Fluke rated for 20 amps, popped the meters internal shunt fuse being rated 20 amps. We wound up using a car ammeter to see just how much current it needed.

As far as where I got into it, was to return it to stock. That required use of the service manual the owner brought along. Whomever owned this thing before we got it had a lot of work done to it. The owner claimed it was using SD 1446's, but we found the 2879 used inside with a lot of re-soldering work. So whomever did the original job, reversed it. There was also evidence that the original called for a 1969 driver final, we found a 2312. The "second final spot" was also taken out, no idea what was put in there by the previous owner.

After the replacement of the ALC and AMC amp transistors, the thing still took 30 amps to work. And we got over 120W in SSB modes, originally we got close to 200W - but quite possibly due to the 2nd harmonics being produced too. This is a good indication to others reading this thread that when you have these types of readings, you might have a bigger problem with drive. Too much drive and lack of AMC/ALC control gives you these "readings" to easily with heavy current draw.

We decided to quit there and AFAIK it's still around - I'll check back with him and verify a few notes. We used the 40 amp because it would still blow the 30 amp. So, when you mentioned stock versus peaked, you are correct, I was turning it down to stock and resetting the frequencies.

They are fun little units to play with, but are h*llacious for interference. Thats where I had been asked to help.

On a side note, I don't understand the "dis-belief" over the current draw. The original 2950, being from the 2900 series - took a 10 or 15

amp fuse [earlier used the 15] and that only used a dual final similar
to 1969's found in a Galaxy.

I thought I was discussing the older 2970's - not the newer ones. I
see that things may have changed considerably. I'm not familiar with
the new style - which I understand uses SMD's.

Greetings!

Yes they are, but when they properly done, they can outdo, if not match, a separate 2pill head-to-head. Thats what makes the 2970 such a hit, a radio with an internal 2pill.

But you have to provide for it. And it means a lot of work inside. The original specs, I believe, calls for AB biasing. It will cut power using that scheme, runs hotter and stays cleaner, then placing the amp into class C to give you the power, less heat, but with some harmonics too.

The point is that the 2-meter versus HF operator nonsense you mentioned earlier has absolutely nothing to do with it - the "jerks" are the same on both (the only difference between 2-meters and HF is the limited number of repeaters on 2-meters - harder to avoid the "jerks" if you stay mainly on the repeaters).

Therefore, you should not have said earlier that the "two meter repeaters are not representative of most hams" (you said "hams" here) and that he should "spend some time on HF" because he "will find a completely different type of operator." That is not true. There are no more "jerks" on 2 meters than on HF - they're only a little more difficult to avoid because of the limited number of repeaters.

If the "jerks" really disturb you, then I agree with your suggestion - simply avoid the repeaters. Its far easier to avoid them on the SSB frequencies (just like on HF).

Take care, W6DKN.

Lets take a survey of the number of jerks and lids out of 1000 QSO's on the
2 meter repeaters in Los Angeles, and do the same with 1000 HF QSO's on 17
meters. If you are correct, the ratios should be about the same...

It has certainly been my experience over the last several years in/around the Los Angeles area of So CA. Maybe in your area things are different. But, like most people, we base our opinions on our personal experiences.

And let's not forget that my original response was to a post stating that from listening to 2 meters, the poster concluded that ham radio in general was just like 11 meters.

> If the "jerks" really disturb you, then I agree with your suggestion -

They don't disturb me - in fact they have no effect on me one way or the other - because I choose not to pay any attention to them.

Excellent post. To summarize, you're saying that after modification, some of the current draw, and some of those high wattmeter readings from the antenna connector, may be due to JUNK signals being added to the output.

If that's true, all you have done is impress your friends, annoy your neighbors, and fool yourself......and how much did it cost you? Some days, we radio hounds can be SO STUPID!

Is there a way to unstick a Troll Meter which has pegged (without having to remove it from the computer)?

Can you use a fuse (like the one on a V-O-M) to protect a Troll Meter against high readings?

If you've ever seen the output of a 2970 or the various forms of the base radio (Galaxy Saturn Turbo et al), on a spectrum analyzer, you would be sick to the stomach. These RCI radios have to be the dirtiest radios that I've ever seen. Spurious outputs in 10 meters, and many other places. Most of which are caused by poor filter design in the radio itself. Some can be reduced by careful alignment of the drive and mixer coils. But they can never be eliminated. The amplifier is also a bit dirty and will add to the mix.

This is certainly not a radio to run on a base if you value your relationship with your neighbors.

Good way to start a fire. Just make sure you stick "The ideal charging wire"
under/over something like carpeting, or rubber mats, between the alternator
and the amplifier battery location. You don't need to use any fuses either.

You might find that the trunk is not electrically part of the car.
Floating deck lids do not make super-good ground planes. An investment in
some braid and related items to join the lid to the car might pay you some
huge and cheap dividends.

> I would make up a special wire just for you

Thanks for the offer, but I don't need any. Where I work we actually use water cooled cables at times. These are typically constructed of several strands of either bare 2/0 or 4/0 copper cable inside of a 3/4" or 1 1/2" ID hose. The copper strands are then crimped to special flare fitting on each end. When the cables are installed the flare fittings conduct the current while at the same time they provide the path for the liquid coolant to pass through the hose, with the copper cable strands inside, thus cooling them.

We also use a fair amount of "Litz" wire, thick walled copper pipe, and copper plate too. Some of that is also custom made to our specifications for use in power circuit interconnections, and transformer windings. Some of our power equipment designs use 1/2", or 3/4", copper pipe for power circuit connections. That pipe is also water cooled too. Then for really high current runs we have used 1/4" thick copper plate, anywhere from 2" to 8" wide, with one or more "passes" of 1/2" copper tube soldered to it, for power interconnections. Of course these are water cooled too, using the 1/2" tubes.

SNIP! ***
one, two, three or more thousand dollars on a radio. It's up to me as a (here we go with those words again) RESPONSIBLE and CONSCIENTIOUS amateur operator to observe the limits and abide by them.

"I agree. Same can be said for cbers. We are responsible for our own actions. Another op is NOT responsible for what I do, nor does another have to answer for my actions."

When an illegal operator gets on the air and starts interfering with me, then it's MY business

"Again, here I agree. BUT, NOT ONE of us are talking interference until now. That isn't or WAS the issue and I'm not going to let you change it."

- whether I'm on 80, 40, 10, or 11 meters. The general opinion you seem to be expressing is that you're going to do what you feel you are entitled to do, and to hell with those who have to deal with the results of your actions.

"In what way do you have to deal with me running a clean station on 27.555?"

Problem is,

"Problem is YOURS, not mine. You just want to make it mine only I won't let you. Therein really lies your beef."

that opinion seems to be prevelant on the 11-meter band, which is why that portion of the spectrum has become regarded as the cesspool of radio.

"(Sigh) Like 3950? Like 381oh never mind."

To answer your question... I go by what the operator states when judging power levels. You are correct, I am taking a person's word, and have no equipment here to measure the power field of a station operating several hundred to several thousand miles away. When an operator says he's operating at 1,000 watts, I have to take his word for it, the same as I so when some CB'er in the next town over is bragging about his 500 watt linear.
"Your examples are extremely biased. Did you do this intentionally? What about the op in the next town who is running ANY amp? Would you not consider HIM to be bragging?"

Your statement is a non-sequetor.

"J.C.! If you want to at least APPEAR refined, at least spell it correctly (non-sequitur) and use it in proper context. My question WAS pertinent...too bad you can not understand it and know not the meaning of, "non-sequetor (sic)"

What the hell are you referring to? Did I do WHAT intentionally? How can I be "biased" when I say that I believe the ham operator who says he's running 1000 watts the same as I believe the CBer who says he's running 500? Your statement makes no sense in the context of the message thread.

"Again, you demonstrate what you can not comprehend. So I will reiterate, in careful context, would you not refer to a ham running 1000 watts in the next town as bragging, as you alluded you would the cber? Are you saying that legal status of the radio dictates the operators modesty? You can't be serious!"

What can I say... I tend to take people at their word until they've given me good reason to believe that they are not telling me the truth

"So do I. Unless they are heavily biased, then their word rapidly loses merit."

Regarding regulating the power on an amateur's amplifer, it is the responsibility of the operator to monitor power output levels.

"Again. Same can be said for a cber IF he is running extra power. And don't tell me it can't be done responsibly."

If a CBer is running extra power, then the CBer is doing so ILLEGALLY. Illegal operation is irresponsible operation. So I tell you... A CBer running extra power CANNOT BE DOING IT RESPONSIBLY

"And just 'cause you say it, don't make it so."

Do what I did - put a couple of 1N4001 diodes in parallel (opposite polarities) to clip off the high peaks in the modem line. That last one caused a 5.3 to 1 SWR on my telephone line.

73 from Rochester, NY

How can you file charges for fraud when you yourself are committing a
federal offense by owning and using an amplifier on the 11 meter band.
Sorry for your loss, but thats the way I see it like the pot calling
the kettle black.

So, are you being deliberately obtuse?

Fine. A StardustER is a 10 meter 1/2 center fed vertical.
Basically a dipole. The main point is still the same. There
is no significant advantage over a wire dipole. Perhaps a
minor bandwidth improvement due to the conductor size but
sense your original application was addressing a 20 mtr
version of the antenna that bandwidth consideration is
irrelevant. The omni-directional aspects would seem like
more of a disadvantage than an advantage. Besides the fact
that in most cases listening with a horizontally polarized
antenna is an improvement over a vertical one.

So, let me get this straight. The guy bought a door stop for $360. He got stiffed for the money because the seller was dishonest. I don't blame him for being very angry with the seller. If I had paid that much for a doorstop I would be expecting to receive in very short order a very nice one. I presume the seller had no real name to divulge, probably no actual street address, and has either run away with the money, bought a bunch of beer with the money and has forgotten the transaction, or used the cash to buy parts to build another couple doorstops in the evenings when he isn't driving his crosscountry route. Or, if the buyer had intended the door stop to be used in a manner which would by statute be illegal, then one party has committed a crime by the manufacture and sale, and the other has planned to violate federal law by the use of same.

I don't mean to dig at anyone, but surely someone will take it that way. Bottom line is that if you sleep with dogs, you shouldn't be surprised when you have to scratch.

>relationship with your neighbors.
>

You're right about that, Dave! Ask me about the Saturn Turbo! It sure looked impressive sitting on the radio desk. But the neighbors threw a party the day I sold it!

I've gotten smart in my old age. I run the RCI-2970 mobile. It's hard to hit a moving target!

>These RCI radios have to be the dirtiest
>radios that I've ever seen. Spurious outputs in 10 meters, and many
>other places.

Here's something important to remember when using RCI gear in a vehicle. Install a good filter on the DC line. Otherwise, you will hear alternator whine when the audio is squelched.

They all need the filter--2950's, 2970's, etc. Go ahead and install it while you're running the power cables. Radio Shack has a good 20 Amp filter in modular form. Three wires to connect: Postive in, Positive out, and Ground.

Just wanted to share something I saw today. A friend of mine has one of the very best looking Tram D201s around. I got a chance to examine it today. I kid you not, it looks as if it came out of the box yesterday! There is not a spot, a stain, a speck of dust anywhere on this radio. It is one of the hand wired ones, and the wood on the sides is highly polished oak (He had a friend who is a cabinet maker to make these), and it gleams! It is not modded, tricked, or changed in any way. He is the original owner. No, it is not for sale, but I just wanted to share this. You know how it is; once in awhile, you run across something that is just beautiful, and this Tram is. I just have never seen any radio that looks newer than this one. He even had a cover custom made for it and it stays covered except on the rare occasion when he fires it up. Just to show you how "much" he wants to sell it, he told me what it would take to get it--it IS that nice. $1250!! Now don't tell me I'm crazy. He doesn't WANT to sell it, so he set the price WAY out of line! I don't blame him, either!

Jerry

I got this in an e-mail.....

Subject: bank robbery

Excerpted from an article which appeared in the Dublin Times about a bank
robbery on March 2,1999:

Once inside the bank shortly after midnight, their efforts at disabling the
internal security system got underway immediately. The robbers, who expected
to find one or two large safes filled with cash and valuables, were
surprised to see hundreds of smaller safes scattered throughout the bank.

The robbers cracked the first safe's combination, and inside they found only
a bowl of vanilla pudding. As recorded on the bank's audiotape system, one
robber said, "At least we'll have a bit to eat." The robbers opened up a
second safe, and it also contained nothing but vanilla pudding. The process
continued until all the safes were opened.

They found not one pound sterling, a diamond, or an ounce of gold. Instead,
all the safes contained covered bowls of pudding. Disappointed, the robbers
made a quiet exit, each leaving with nothing more than a queasy,
uncomfortably full stomach.

The newspaper headline read: IRELAND'S LARGEST SPERM BANK ROBBED EARLY THIS
MORNING

Send this to anyone you think needs a good laugh.

I just wanted to warn potential No-Name customers that something is wrong in the No-Name camp..I sent a money order for 360.00 on January 12, 2001 for a 5lb maul.. The money order cleared my bank on January 22,2001..Still haven't received my amp and have had various e-mails from Stickman that either the amp would be shipped, (which it wasn't), or they had a break-in and gosh, my amp was stolen..Not to worry though,Stickman said he will suck my cock when he hand carries my amp to me. it was to be shipped That week 27 ILLEGAL FAGGOT KEYCLOWNS has come and gone in Stickman's ILLEGAL FAGGOT KEYCLOWN ass. In several weeks he sucked off HUNDREDS of ILLEGAL FAGGOT KEYCLOWNS, just like me!..It will be 9 weeks this Friday and still no amp or replies to my e-mails..I had to file Fraud charges because he spits out the jizz instead of swallowing it, and will see what happens..Be very careful of this amp maker, he may have AIDS...Loren

SNIP! ***
one, two, three or more thousand dollars on a radio. It's up to me as a (here we go with those words again) RESPONSIBLE and CONSCIENTIOUS amateur operator to observe the limits and abide by them.

"I agree. Same can be said for cbers. We are responsible for our own actions. Another op is NOT responsible for what I do, nor does another have to answer for my actions."

When an illegal operator gets on the air and starts interfering with me, then it's MY business

"Again, here I agree. BUT, NOT ONE of us are talking interference until now. That isn't or WAS the issue and I'm not going to let you change it."

- whether I'm on 80, 40, 10, or 11 meters. The general opinion you seem to be expressing is that you're going to do what you feel you are entitled to do, and to hell with those who have to deal with the results of your actions.

"In what way do you have to deal with me running a clean station on 27.555?"

Problem is,

"Problem is YOURS, not mine. You just want to make it mine only I won't let you. Therein really lies your beef."

that opinion seems to be prevelant on the 11-meter band, which is why that portion of the spectrum has become regarded as the cesspool of radio.

"(Sigh) Like 3950? Like 381oh never mind."

To answer your question... I go by what the operator states when judging power levels. You are correct, I am taking a person's word, and have no equipment here to measure the power field of a station operating several hundred to several thousand miles away. When an operator says he's operating at

1,000 watts, I have to take his word for it, the same as I so when some CB'er in the next town over is bragging about his 500 watt linear.
"Your examples are extremely biased. Did you do this intentionally? What about the op in the next town who is running ANY amp? Would you not consider HIM to be bragging?"

Your statement is a non-sequetor.

"J.C.! If you want to at least APPEAR refined, at least spell it correctly (non-sequitur) and use it in proper context. My question WAS pertinent...too bad you can not understand it and know not the meaning of, "non-sequetor (sic)"

What the hell are you referring to? Did I do WHAT intentionally? How can I be "biased" when I say that I believe the ham operator who says he's running 1000 watts the same as I believe the CBer who says he's running 500? Your statement makes no sense in the context of the message thread.

"Again, you demonstrate what you can not comprehend. So I will reiterate, in careful context, would you not refer to a ham running 1000 watts in the next town as bragging, as you alluded you would the cber? Are you saying that legal status of the radio dictates the operators modesty? You can't be serious!"

What can I say... I tend to take people at their word until they've given me good reason to believe that they are not telling me the truth
"So do I. Unless they are heavily biased, then their word rapidly loses merit."
Regarding regulating the
power on an amateur's amplifer, it is the responsibility of the operator to monitor power output levels.
"Again. Same can be said for a cber IF he is running extra power. And don't tell me it can't be done responsibly."
If a CBer is running
extra power, then the CBer is doing so ILLEGALLY. Illegal operation is irresponsible operation. So I tell you... A CBer running extra power CANNOT BE DOING IT RESPONSIBLY

"And just 'cause you say it, don't make it so."

Don't be so touchy, Train. This is not a ham versus CB thing. Its the law (even though N4JZH has it slightly wrong). Since No-Name is not legally allowed to sell an amplifier designed for CB use, and Loren is not licensed to legally use such an amplifier, there would probably be no legal recourse in the laws. Its a long standing legal tradition - the law does not protect a person in the act of breaking the law.

At this point, Loren's best, and likely only, recourse is to tell others about his experience with No-Name. Perhaps a little negative publicity will convince No-Name to respond a little more positively.

Gee, didn't mean to confuse you there with the reference to fleas and dogs. Let me make it a little more plain. If you are attempting to buy for your use a product which you can not legally use from a person who can not legally manufacture or sell it, both individuals are party to a conspiracy to commit a crime. Why should one party expect the other party to be honest in their dealings when the foundation of the deal is at its core illegal? In other words, if you sleep with dogs, you shouldn't be surprised when you have to scratch.

There are plenty of hams in this NG, and they DO care about people. There are some good non-ham CB operators here who also care.

And there are a few who don't care about anybody or anything.

It's not difficult to tell who is whom. Generally speaking, when you find someone who puts down entire groups of people (hams, SSBers, or whatever), you're seeing one of those in the non-caring group.

: It would appear that it is also populated by those who do not want to
: upgrade.

Point well taken, however its been my experience that many older hams follow Mark Twains axiom that "A classic book is one that is often quoted but never read". For years Ive been hearing older Hams say; "Weve got to get more young people into the hobby". They usually say this with great expectation and vigor.

Yet, when someone from the CB arena acquires their initial Tech license, then hops on the local repeater for the first time, and accidently says my "20" is here or 10-4, 8 or 9 of these older guys jump on the air and tear the kid a new one. In my area, back in the early 70's, a group of friends and I were Novice class operators who, because of our equipment (SWAN) used to slightly drop below 28.300 into the 10 meter CW zone (a few cycles, not a few kilocycles). This would usually prompt the local radio cops to air their frustrations by giving us the scolding that they would have love to give their own kids, in addition to "Older than Moses" OO's who felt it was their duty to remind us to ID every 10 minutes. Out of a group of 7 of us, it is only myself that is still licensed to date.

The amateur radio hobby has got to come to grips with the reality that most new amateur operators WILL most likely come from CB. Soliciting schools and Boy Scout meetings hasnt worked for almost 20 years in adding any serious members to the hobby, nor will they ever work again because "those days are over". The problem is that most amateurs arent willing to accept the fact that the "CBer of today" is most likely the "Ham" of tomorrow due to the fact that the CBer is already half way there by having some sort of interest in "Radio" in general. Instead of alienating them, the Ham community should be embracing them.

The wheat will seperate itself from the chaff if both wheat and chaff are given an equal shot.

And that's really the sad part. It is a good looking radio, but for the
money that they want for one (The saturn turbo), you could buy a
slightly used ham HF radio and have more features and a clean 100 watt
output.

>
> I've gotten smart in my old age. I run the RCI-2970 mobile. It's hard to hit a
> moving target!

I use a 2950, with an external amp. The '70 is pretty much limited to
what it puts out, which should be no more than 35 watts carrier on AM if
you want full modulation capability. Trying to drive an amp with a '70
is tricky, unless you get specifically designed for high drive.

The 2950 is also slightly cleaner spectrally, without the amp pancake.

They sure do. They also have those other contributors whose mail appears to go through from the senders end, but is deleted and trashed before it even shows up at the FCC.

As it happens I have eased the path of a number of SSB CBers, outlaws to a man, into the hobby and have several long-term friends among them. There is no proselyte like the convert so I think you will find that most of those who are giving the fugitives from the CB community the most grief are themselves only recently out of the fold. The real pains on this newsgripe are codeless Techs, not ancient Advanced and Extras.

I felt called upon to comment on this particular case for several reasons. The first being that he is (use QRZ.com) a Tech Plus who, by his own words, started in 1981. It is more than likely that he is an old time Tech who was renewed Tech Plus in 1996. This, assuming he has an old license or something to prove he was around prior to 1990, means he is in fact a 'Paperwork General', all he needs is ten bucks to be a General. Now that is a real example of reluctance to upgrade or general cluelessness; take your pick.

It would also make him a prime example of Lifer Tech Syndrome which seems to cause Leland to break out in great gobs of righteous indignation whenever I mention it. One of the unfortunate aspects of the Tech ticket for 50 years is that it becomes a dead end; the time for the code practice never seems to come and pretty soon we spend the time railing against code tests (and successful code testees), becoming walking experts on the regs and arcane propagation phenomena, and buying hardware on numerous trips to Dayton. In short a major exercise in self-deception. So I do not view the Tech as the entry-level ticket; might change my mind if the Techs themselves took up viewing it that way. So I advise taking the code test as well as the Tech and General writtens. Hell, you might even pass.

Back when the 1x2s were new a number of us enjoyed coming up on the repeater with 'breaker 85' and interspersing things with 10-4s and such. This was more to stir up the strak old farts which we had done for years b ut doing it with a 20wpm Extra really got their goat. Again, most of the real strak types you meet on 2 meters are Codeless Techs. It is not your problem if they got the suppositories in sideways.

Can't disagree with anything you said. But I think you might find the real problem is with your newbie brethren than with us mellow old guys :-)

I am not sure the FCC can do that although it is probably diverted thru a Bozo Filter to an archive tape somewhere.

Some years ago two guys petitioned the FCC to reserve some UHF channels for real educational use in the LA basin before Gene Scott bought them all. The Commission wasn't having any part of that can of worms and dismissed the petition. But it got into the God Squad underground press as a petition to outlaw religious broadcasting so the FCC got mail out the wazoo, fortunately with the proper RM number on the envelope so it could be ignored.

But the law at that time required them to keep it for three years and soon every inch of real estate the Commission had was covered with mail trays. It took an act of Congress to allow them to shred it. The only happy ones were the paper recyclers and the Postal Service that got its trays back. It was right out of Bil the Galactic Hero if you read the Harry Harrison novel.

I would suspect e-mail is also subject to the three year rule so the auditors and Congressmen have something to read.

Hello Hank!

Sounds like you have an early model 300 Gray amp.

If you install the 2SC2879's in this amp. you should change the input and output devider/combiner. also since this amp is operated as class c, you may want to rework the keying circuit so that the extra 20 to 40 watts of drive that it will take to get full power may blow that circuit.
Your input matching circuit should also be reworked, so that there will be good swr between your radio and the amp.
finally you will need to remove the small trimmer capacitor on the output, it will short after about 350 watts. replace it with a ceramic cap. 100pf. 1kv

Take care, and good luck.

Art.

If the FCC is not interested in reading this list, what makes him think they
will read his e-mail forwards.
By what he is trying to do he has made himself a CB'er, and a mud duck at that.
Its like telling the FBI to watch the evening news because he thinks they are
selling drugs on the air.
Oh, what the heck no one has ever gave us CB'er including him, any credit for
being political correct!

Take care,

Hound dog

That would be fine for side band, but on AM you would have an instant load as soon as you keyed the amp which would mean a huge voltage drop, and a huge power drop. then you yell auuddiioo and this loads the amp further, and more voltage drop occurs.
Just keep in mind that a starter will work just fine all the way down to about 9 vdc, however your amp needs sustained voltage of 12 vdc or more.

Source record: 75587

If you use a large enough wire, #2 or larger, depending on the power required, all you would be doing is running the battery down faster than your alternator could recharge it. A typical car battery can take a sustained discharge rate of 200 amps for a couple of minutes before it begins to show a significant voltage drop. If you add your alternator's max charge rate of say 100 amps then you could draw up to about 300 amps. If you are afraid of running your battery down then add an additional battery with a very large coupling strap between the two batteries. If you have the room that is.

Note: I don't recommend extremely high discharge rates on standard car batteries or even deep cycle "marine" batteries. This tends to warp the plates and can cause internal shorts. I've seen batteries explode during extremely high discharge/recharge cycles. You are much safer using several moderately sized batteries in parallel rather than one big-mamma battery.

Kevin, WB5RUE

disclaimer: amps are illegal on CB

You show me a statute from the Gov that says he cannot own the amp, show me where he cannot buy the amp in kit form, show me why he cannot use the amp on 10 meters, how do you know every last detail of his deal? You don't he may be buying the thing with no pills in it , is that illegal? No its not perhaps he is making a experimental medical device and would like to run it into a dummy load. You have no info other than he got ripped off, Why not stick to the facts of what we do know, Not your assinine presumed use, and assumptions. When you provide me any info I asked for maybe then you will be credible other than that they are all your opinions.

Asinine 'presumed' use? Look, I never commented about the guy owning the amp other than to say it was not legal to use and that to do so would have constituted a conspiracy between buyer and seller. It IS illegal for an amateur to build more than one copy of a particular amp in a calendar year, so if the thing is as apparently is the case, then that is illegal. Why would the guy spend that kind of money on a 10 meter only amp when for a little more he could buy a general use-10-160 amp if he was a ham? Why would he be griping on the CB newsgripe if he was a ham? If it isn't just real apparent to you, then I can't help you. Why should anyone expect to find an honorable person selling an illegal product? Isn't an honest criminal a oxymoron?

I really do feel badly that the guy got screwed on the deal, but when you are purchasing a not so legal product from someone with a name like Skippy, well, maybe you shouldn't expect American Express to honor their anything goes guarantee.

Damn I really stirred the pot on this one.
You would NEVER see a person named stickman or any other handle
selling in QST or Amateur Radio Trader or other publications in fear
of getting there ass busted for selling illegal amps.
My dad always said it is hard to hide the fact that no matter how you
disguise it chickenshit is chickenshit. same applies to stickmans 5-lb
maul. nuff said.

Ok, i have the radio. I've tried the mods i've found on the net to allow the radio to function in international mode yet they dont work. When i purchased the radio i had a sheet that said "10 Meter Version" on it and has two solder joints/jumpers that it says to remove on it but i would rather not open the radio unless i have to. I havent ever even seen this modification info before so i guess thats why im asking.

Thanks in advance,
David

FWIW, here is the relevant portion of the CFR. You guys can haggle
about the interpretation.

Rick

[Code of Federal Regulations]
[Title 47, Volume 1, Parts 0 to 19]
[Revised as of October 1, 1999]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR2.815]

[Page 552-553]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 2--FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND
REGULATIONS--Table of Contents

Subpart I--Marketing of Radio-frequency Devices

Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power
amplifier is any device which, (1) when used in conjunction with a radio
transmitter as a signal source is capable of amplification of that
signal, and (2) is not an integral part of a radio transmitter as
manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or
lease), or import, ship, or distribute for the purpose of selling or
leasing or offering for sale or lease, any external radio frequency
power amplifier or amplifier kit capable of operation on any frequency
or frequencies between 24 and 35 MHz.

[[Page 553]]

Note: For purposes of this part, the amplifier will be deemed
incapable of operation between 24 and 35 MHz if:
(1) The amplifier has no more than 6 decibels of gain between 24 and
26 MHz and between 28 and 35 MHz. (This gain is determined by the ratio
of the input RF driving signal (mean power measurement) to the mean RF
output power of the amplifier.); and
(2) The amplifier exhibits no amplification (0 decibels of gain)
between 26 and 28 MHz.

(c) No person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease) or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies below 144 MHz unless the amplifier has received a grant of type acceptance in accordance with subpart J of this part and subpart C of part 97 or other relevant parts of this chapter. No more than 10 external radio frequency power amplifiers or amplifier kits may be constructed for evaluation purposes in preparation for the submission of an application for a grant of type acceptance.

Note: For the purposes of this part, an amplifier will be deemed incapable of operation below 144 MHz if the amplifier is not capable of being easily modified to increase its amplification characteristics below 120 MHz, and either:
(1) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 decibels or less gain is exhibited at 120 MHz and below 120 MHz; or
(2) The amplifier is not capable of even short periods of operation below 120 MHz without sustaining permanent damage to its amplification circuitry.

(d) The proscription in paragraph (b) of this section shall not apply to the marketing, as defined in paragraph (b) of this section, by a licensed amateur radio operator to another licensed amateur radio operator of an external radio frequency power amplifier fabricated in not more than one unit of the same model in a calendar year by that operator provided the amplifier is for the amateur operator's personal use at his licensed amateur radio station and the requirements of Secs. 97.315 and 97.317 of this chapter are met.
(e) The proscription in paragraph (c) of this section shall not apply in the marketing, as defined in paragraph (c) of this section, by a licensed amateur radio operator to another licensed amateur radio operator of an external radio frequency power amplifier if the amplifier is for the amateur operator's personal use at his licensed amateur radio station and the requirements of Secs. 97.315 and 97.317 of this chapter are met.

[40 FR 1246, Jan. 7, 1975; 40 FR 6474, Feb. 12, 1975, as amended at 43 FR 12687, Mar. 27, 1978; 43 FR 33725, Aug. 1, 1978; 46 FR 18981, Mar. 27, 1981; 62 FR 10470, Mar. 7, 1997]

David,

Leave the jumpers in. Solder the lead that says "+12V" to ground, that will
open the radio up on all bands and increase power and loudness.

1087. International Broadcasting on CB?

Newsgroup: rec.radio.cb
Date: 2001-03-16 01:35:55 UTC
From: nigelnyckid@aol.com
Message-ID: <20010315203555.02932.00000709@ng-mk1.aol.com>
Source record: 75522

Greetings!

Tuesday morning I was on my way to work, channel surfing the CB like I do every morning, when I heard on channels 19, 25, and 37 what sounded like International broadcast stations. (On AM, not SSB)

On those said channels, it sounded like 20 stations all broadcasting at once, in different languages like German, Italian, Dutch, Etc. And many other stations speaking English in a British accent.

My question is, are there some European countries that broadcast on the CB frequencies? It was pretty interesting to listen to, even though it was impossible to understand anything they were saying, because of the MANY broadcasts all coming in at once.

The broadcast stations eventually faded out and the CB on those said channels was quiet again.

Pretty strange, I've never heard that happen before. Weird......

P.S. My radio is a bone stock Cobra 148 with no extra channels, so this happened on the legal 40 channels, not the freeband.

Nigel.

No. By ITU rule, 27 MHz is assigned to land mobile type uses. It is possible for a single station to be generating a harmonic on the band but just a bit too much coincidence for more than one, and then on the specific frequencies you are listening to as well. More likely a couple guys are playing back broadcasts they have recorded, generating the usual QRM on the channels.

Oh MARTIN PERHAPS YOU HAVE SEEN THE INFLUX OF HAMS IN THE "CB" Newsgroup, i couldn't think of a better place. The point remains how do you know the end-users intention. I see many hams at Hamfest buying Texas Stars am I to assume they are using them on 11 meters or are they going to use them in the mobile with a 2950 on 10 meters ?. So are you saying that Visa and Master Cards have been laundering illegal amp money from all these companies on the internet selling them and taking plastic.
? We probably know what he was going to be using the amp for, I am not naive but the person just got whacked from a normally trusting illegal CB amp maker.

thats what I thought it was for rock and roll ... Well some guy in a chat
room said he had a no named amp for sale that did 500 watts rms a channel
now me not being real bright figured, that would make one hell of a kicker.
He told me nonames were the loudest amps out there, So i sent the money ..

What a moron! If its being done in the US of A, its being done worldwide.
Freebanding is in because of the Sunspot activity creating contact
conditions on all bands. Stop the nonsense Gary!

Don't sweat it. Hey, I dropped my tickets back around 1981 or so and decided to get them back. So, newly licensed (or relicensed), I got on the local repeater and made what apparently was a GRAVE error. I said the handle was Jim. Ooooppppsssie! I got jumped on; however, when I was active in the 60s, this was common usage. Apparently the CBers picked it up and then the hams would never touch it again. Now, I guess it is 'preferred name' on CB. Whatever. Don't sweat the small stuff. Paybacks are SOoooo much fun. One guy was going on and on about the necessity of CW. So .... we switched to 40 WPM F2 emission on the repeater! Always try and accommodate folks, I say. Still on 440 FM. Still can handle 40. So what? Just have fun.

You should have been up Watertown, NY way or further North and East a couple of years ago. Cell phone? Har ... they were asking for mobil hams with HF capabilities. Also food and batteries. One repeater tower and antenna were pressed into use for the police. No power and no phones for hundreds of miles. Quite an ice storm. Of course, I suppose if your cell phone is out you can always call the telephone company ...

You answered your own question at the end. Good Semantics.

I see many hams at Hamfest buying Texas Stars am I to
> assume they are using them on 11 meters or are they going to use them in the
> mobile with a 2950 on 10 meters ?.

Assume (ASS U ME), never assume anything since it will probably make an
ASS out
of U or ME. But some pretty strong clues were dropped.

So are you saying that Visa and Master
> Cards have been laundering illegal amp money from all these companies on the
> internet selling them and taking plastic.

Your interpretation, I haven't even touched on Visa/MC and their role
since they
weren't mentioned (check was sent, remember).

> ? We probably know what he was going to be using the amp for, I am not naive

Thanks semantic master, you just answered your own question.

> but the person just got whacked from a normally trusting illegal CB amp
> maker.
OXYMORON, trusting and illegal used together. Since our AMP isn't
kosher,
what makes you think the seller is? Best thing to remember about this
episode,
is the fact of trying to deal with persons selling nefarous gear (of any
type)
aren't operating in the open and clear, always in the gray mists and
hard
to pin down if a deal goes sour,

the only oxy- moron is you, So you are saying anyone who sells a cb amp
cannot be trusted? Because they are selling a so called "illegal product" Is
that the stupid arguement you present. And I guess you think its ok that a
ham or a cber can buy the same texas star but it would be "illegal" for a
cber to buy it, and the person the cber is buying it from would be the same
shady, gray mist dealing untrusting guy, but it would be ok for the ham to
buy it from the same guy and he be cools as shit .. Come On! Qsl...

Oh where has warped old Twistedhed gone?
Our favorite little illegal CB friend
Who thinks UFO's and CIA are after him
Yeah he's a freebander and an illegal keyclown
"Stealin' is OK if you don't get caught" is his motto
And a certain man in Ohio is his worst nightmare
So little Twisty has run away crying, CRYING
"Run away Twisty, Run away!" weeps Tnom and Scottiekins
"Oh them hammies are so mean" blubbers Dweebo
So Twisty has run away
So Twisty has run away!

Damn right BadaBing. I don't see why we can't break a few laws without these prudes acting all holy. After all it's us who have to pay the price if we get caught. Unfair laws are meant to be ignored. We're just giving people what they want. Who says it's illegal? Ham cops should keep their noses out of our business. They wouldn't last a second on the street. Enuf said.

Yo guys,

I worked two K8 stations on ten yesterday, and there was terrible interference on 28305. I wonder if there might be a slight possibility that the interference came from illegal, pirate CB stations?

Greetings!

You have a good point, but the bigger problem is the charge rate for recovery in the battery itself.

Unfortunately, the standard automotive battery does take time to recoup a charge.

The better benefits if you wish to remain with the simpler outfits is to try the following...but check vehicle warranty for possible "conversion" problems...

Increase AWG size of wire from output post of alternator and route this directly to the main engine buss feed that the original alternator wire used. Shorter runs are better...

Upgrade the battery, use a 800 CCA? Try 1000 CCA upgrade if it will fit - highly recommended anyways to replace the used battery.

Solder the connections from both the battery post terminal connections and the alternator wire - to improve conductivity and reduce resistance.

As far as soldering, this is best left without the battery - remove it first. Which is why I recommend the upgrade of the battery CCA capacity, at least you get a fresher battery and a larger amp capacity - it can be done at this time.

For soldering, I use a propane torch and being careful, low flame, not to overheat or braze wires and plumbing for the fuel, apply a flux and heat the connectors and solder well. This concept works best with newer wiring on a vehicle. Fresh copper takes to tinning better than older, oxidized wiring.

For easier working, remove the wire, or at least dislocate it from the main harness to allow you to get the wire connector hot to take the solder without messing up everything else. Many vehicles have their main battery feeds soldered at the factory, but many are not, and are left to the mercy of the environment and corrode easily.

Solder the connector lugs too, the ones that go to the engine block for ground are always neglected. A good coat of solder on the lug at the terminal where the crimp is the way to go. Re-attach the wires and reposition in the loom if necessary.

At this time re-work the jumper that goes from frame to the battery post too, on the ground side, to decrease resistance and increase service life. If you can, make this a short run to help reduce ground

currents and eddies that will form between the block and frame grounds. Less noise is the usual result.

There is also help in using a conductive paste that really helps reduce the corrosion problems on battery posts, a grease based copper lube for coating the battery post and lug connections really help in winter and salt spray environments. Just a little goes a long way, don't over do the amounts, a little to seal the gaps in the posts and lug to bolt/thread connections is enough to make this work. It removes or displaces air and water entry - keeps the connections better and virtually eliminates corrosion when it's applied.

This may seem like a lot of work, but many problems are due to corrosion and lack of proper conductivity when parts age. I can do this in the time it takes to read this letter. It's that simple. And taking the time to do the job, makes the vehicle far more dependable when you need it most.

Just to let you know where I am coming from, I think Sparky is a calming influence on this ng and even if I don't always agree with what he writes, I am glad he is here and I have learned a couple of things from him.
I think where Sparky wrote that he was not a ham in reference to the Sparky-voobner troll was a misunderstanding. Sparky, this is not my personal opinion that follows but what I think that idiot was refering to. I think he was refering to you as one of the "FLRC loser friends to back me up."
What I really want to know though is how do we get rid of people that post drivel like that post and all the queer crap that is always associated with Doug and others in reference to Twistedhed and Tim. Why can't people just act like MATURE adults? I can understand disagreeing with someones opinion and voiceing your opposition to their activities but do people have to act like second graders to do it?
There is enough hatred and discontent on the airwaves, do we really need that crap here too?

Thanks, I appreciate that. And if someone were to agree with me all the time I would start to worry -- they would have to be a real basketcase ;-)

>I think where Sparky wrote that he was not a ham in reference to the >Sparky-voobner troll was a misunderstanding. Sparky, this is not my >personal opinion that follows but what I think that idiot was refering >to. I think he was refering to you as one of the "FLRC loser friends to >back me up."

I have nothing against hams in general, and I'm sure there are a few bad apples in the ham community as well as CB radio. But there seems to be a perception that anyone who opposes the use of illegal equipment is a ham, and some hams seem to think that all the problems come from the CBers. I subscribe to neither of these bogus attitudes, but that troll-post accused me of belonging to both camps. This was the reason for my response, nothing else.

BTW, I speak only for myself. FLRC only means that I oppose illegal operation in the CB. That doesn't mean I am a covert warrior for the cause, which I am not.

>What I really want to know though is how do we get rid of people that >post drivel like that post and all the queer crap that is always >associated with Doug and others in reference to Twistedhed and Tim. Why >can't people just act like MATURE adults?

That's the easiest question ever posed on this ng: They are, IMHO, like the illegal ops -- they won't follow the rules (of civil behavior, of CB radio, etc) because they don't want to. But because they oppose the same behavior they exhibit, these types of trolls are the biggest hypocrites on this ng.

> I can understand disagreeing >with someones opinion and voiceing your opposition to their activities >but do people have to act like second graders to do it?

Perhaps they are second graders -- the mental/educational/emotional equivalent.

>There is enough hatred and discontent on the airwaves, do we really need
>that crap here too?

Only to make the rest of us look civilized.

It doesn't matter what her license status is, Tim. As far as I know, nobody is allowed to use an amplifier designed for CB use. And most ham operators would not use such an amplifier because it's probably too poorly designed (not clean enough, or filtered enough, to prevent unauthorised emissions outside the ham frequencies).

> stickman was building a 10 meter amp?

If Loren were license, I certainly would not recommend an amplifier such as this. Most of these home-made linears are simply not built cleanly enough, or are not filtered well enough, to prevent unauthorized emissions outside the ham frequencies. In other words, if Loren were licensed, using an amplifier like this would be a sure way to lose that license.

But you missed an important part of my explination (or perhaps I didn't mention it). No-Name knows what the amp was for, and their best defense when the "guys" he files the fraud charges with show up is to simply point out the law that prohibits No-Name from selling the amp.

Since they're not legally allowed to sell the amp, the person cannot get his money back that was offered in an attempt to cause them to violate the law. Now Loren can claim that he didn't know about the law (which any lawyer would immediately challenge), but the court's response will likely be that famous old saying (all together now) - "ignorance of the law is no defense."

I really wish I could think of a way for him to get his money back, but the more I think about this the more I think he is simply screwed.

dwight, hams use texas stars all the time and there cb amps. a good ham would know how to rework the amp and clean it up for there use if they really wanted to. as i pointed out to somebody else these 1 driving four amps cant be beat as far as qrp rigs go. a 5 watt qrp rig would be a perfect match for a texas start 667v and be nice and clean as well no matter which hf band from 80 to 10

1143. The "Beast"

Newsgroup: rec.radio.cb
Date: 2001-03-16 15:58:16 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3AB23818.9F168174@qnet.com>
Source record: 75711

The ï¿½Beastï¿½, a WW II Vintage Linear Amplifier:

I grew up in the 60ï¿½s and 70ï¿½s, and dear old Dad had a big Linear Amplifier custom made from several ART13 Collins Military Aircraft HF transmitters, and other W.W.II surplus equipment. This custom made Linear Amplifier had a high voltage power supply that was at least four feet high and had to weigh 280+ pounds. The Linear Amplifier set on top of the massive power supply, giving the look of a six foot tall by 3 feet wide broadcast station transmitter. This big Linear Amplifier used a single 6146A tube driving four 813 World War II tubes. In a parallel, push pull circuit. The 813 tube was a large milk bottle sized tube with a tungsten plate with a plate power dissipation of 125 watts. This monster had a variable RF output adjustment, that dad kept turned down most of time. When the RF control was turned up I could see the wattmeter needle go off the 1000 watt scale, on voice peaks. But normally the RF control was usually set at full counter clock wise, which throttled the Beast Linear Amplifier back to a mere 100 watts. The Beast was driven by a General Radiotelephone MC-11A, a old tube type CB radio. And the antennas used where a Scanner, Quad, and a Moonraker 4.

When the Beast was turned on you could distantly hear large relays engaging and see the four milk bottle 813ï¿½s tubes light up, behind a RF proof, wire screened window. And it had a smell all its own. When you talked you could hear your voice it the four 813 tubes, what a conception of getting out. What a magnificent marvel of engineering. You could imagine all the parts that made up the Beast, being in a B17, C47, B24, B29 or PBY flying over a enemy target. I asked Dad if it were possible if any of the transmitter parts were in a radio that possibly radioed back to Pearl Harbor the exact location of the Japanese fleet just before the Midway battle....or something like that? ï¿½Nhaaaaaï¿½ the old man would growl ï¿½Probably in some warehouse for years then sold as surplus, for pennies on the dollar. The government needed the warehouse space to store paper clips.ï¿½ dad would thunderously declare.

When my Mom would entertain her Bridge Club, she would just try to ignore the Beast setting over in the corner looking like a old military communications radio shack. But it still got plenty of looks from all the ladies. And when I appeared and tried to explain what it was, and what it did, Mom would send me to my room..... What Dadï¿½s Radio Room needed was a W.W.II enemy aircraft identification chart, ammo boxes, swords on the wall, gun rack, and a American Flag. But Mom didnï¿½t think so.

The beast is long gone, but Iï¿½ll never forget it, or its magic aura, and awe it projected. And I am sure the locals will never forget it either,

or the guys in Arkansas, Alabama, Georgia, or Florida.....

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

So you think its ok to take Loren's money?

After all it's us who have to pay the price

But are unwilling to pay if they can get out of paying the price.

if we
> > get caught. Unfair laws are meant to be ignored.

Hey, why should the $360 hafta be repaid, maybe the "seller" thought
it was unfair?

We're just giving people
> > what they want.

No arguement there, free enterprise.

Who says it's illegal?

Some wiseacre gave my LEO friend the same question when he was stopped for no licnese plate, result was the same, Look in the Law Book, tell it to
the judge (Judges are hard to amuse)(learned on the street, school of hard
knocks).

Ham cops should keep their noses
> out
> > of our business.

What is a "Ham Cop"? VOOB and Crew? N8WWM? How about the Amateur Radio Guy around the street. With the "RAT LINE" to the FCC, via e-mail, anybody could now be a "HAM COP" or a Radio Hound.

They wouldn't last a second on the street. Enuf said.
> >
> >
Been on the Street for years, traveled some, and understand the subject matter
better than you think I do. Bada, I just made a comment about the integrity
issue, not about the issue of "illegal amps", could really care less about em.
Don't run em, don't need em. I don't apoligize for being both an AMATEUR RADIO
OP and CB USER, but I don't gloat over poor Loren's Misfortune but have a deep
understanding into what happened,

THE FACTS OF THE CASE:

Loren sent a $360.00 bank check to cover the purchase price of (1) One NO NAME which the check cleared the bank but no "product" was received.

NOW: Did Loren use US MAIL (If so, then mail fraud charges are applicable)
If sent by private courrier (Fed ex and the like) then a different route must be followed (usually local charges and the like).

It may or may not come up about the nature of the item of commerce, but if
it does, you can bet some officer of the court will try to do some damage control (READ SPIN) to color the case in his favor.

I hope this can be resolved but the lesson I recieved from this whole incident was:

1. Order an item of commerce not permitted by current rules or law and a person must realize that they take a certain risk.

2. If a person breaks a law, they will probably break their word of honor.

If a person can't be trust to keep the law, how can a person be trusted to
keep their word?

Unless you just wanta troll for comments from the
Peanut Gallery, consider this thread at an end, I
don't engage in silly childish name calling.

Do you have any constructive comments? What is wrong with what I suggested, other than the foolishness of putting a high power amp in a car in the first place? I've built high power 12-volt "generators" based on this idea with high power lawn-mower engines and "automobile" alternators.

They are almost always on AM, most too stupid to know how to use SSB. When they do sometimes use SSB it is a dead give away that they are illegal cb ops. They always use the incorrect side band that is normally used on 10 meters.

I can think of safer jobs than the radio room on the Yorktown.

There are indeed those who are mired firmly in the past although their numbers are decreasing rapidly. As I noted, some of the most strack (Youse vil march in schtrait lines und you vil like it) ops are the lost souls on the repeaters. There was at one time a fairly strict seniority system in place which I have had the good fortune to see dismantled by the

FCC over my career. So the old ops have lived to see their once-treasured old W#xxx held by the newest Tech in the block and my ancient 1x2 can be held by a kid with good study habits. Big deal.

While there are those in the clubs who do feel it their civic duty to initiate the newbie, particularly the Codeless Techs, into the realities of the universe -- not the least of which is that you join the fraternity with a General ticket -- a certain amount of this is to get him off of his dead can with respect to the code. A number of us fought our way out of the Technician Trap so, right or wrong, we are going to be a bit more sharing of reality (some would call it sheer bigotry) than some others. So things are not entirely what they may appear at first encounter.

Every village needs an atheist, an idiot, a drunk, and a curmudgeon or it wouldn't be a village. Pass out mikes and keyboards and you will get the same cast of characters.

You remind me of the fabled experiment in a looney bin where four guys convinced they were Jesus were handed basins and sponges during Easter week and told to wash each others feet. Whatever came of it was guaranteed to be spectacular. Lock up the Lifer Techs with the TOFs and watch the sparks. Nice touch. I like it.

OK guys, I looked at all the responses and I figured I should tell you the story....This was a present for my husband as we just celebrated our 10th anniversary..I do not know anything about CB radios, but my husband wanted this for his radio, (yes he is a trucker)..It took me a long time to save for his present and after seven weeks of it not coming, I looked at the No-Name website and found the disclaimer about not using the amps on CB radios..I e-mailed No-Name demanding a refund..I do not want the amp..My husband doesn't need any trouble..I figured I'd spend the money on something else for him, but No-Name will not respond and I haven't received a refund..
If I knew they were illegal, I never would have sent the money order..Thanks for your time,
Loren

Forget it. Ham radio went through a similar craze of gadgets to - try to -
make a two-meter handheld double as a car radio several years ago; add up the
cost of the various gadgets - and you could buy a good mobile CB when your
favorite local truck stop runs a sale.
Try having a handheld double as a car radio, and you will have to disconnect
and reconnect antennas - and likely mikes - every time you want to use it
handheld.
Been there in the earlier days of two-meter ham radio - used an Icom
handheld as a car radio.

They can posture all they want on their amateur bands and on the amateur groups,. but while they're here they should behave themselves. Although against their nature they should attempt to act mature like the full time CB'ers do when posting to this group. Stop the self aggrandizing and act normal.

I think Dana meant to say the above.

Just as a clarification, may I ask a question or two? It is a fact that amplifiers used within the Amateur bands DO have to meet certain criteria like, for example, spectral purity. Will the NoName amp meet these criteria as stated in FCC regulations? Is it multi-band, or just designed for a single band such as 10 or 11 meters. Correct me if I am wrong, and I don't mind criticism nor am I trying to stir up angst, but my understanding is that no mfr. may build amps capable of operation between 24 and 32 MHZ "out the door". And a ham may not build more than 1(??) per year for his own use--and I assume this would be a multi-band design as well. So will a NoName fire right up on 11 meters right out the mfr's door? Now, tell me if I am wrong about this next question. Do the regulations not say that IF FCC finds reason to inspect a CB station, AND find an amplifier on site (and I realize there *could* be mitigating circumstances), they *will* assume it is being used in conjuction with a CB and assign penalties?

Yes, it is easy to jump to the conclusion that a buyer is going to use a NoName amp for CB. Come on, guys, we know what these things are really for, now, don't we? It *IS* possible that he could be using the amp for something other than CB, but if the white Chevy van pulls up outside and the occupants don't find a medical lab on premises, the jig is up. Those gentlemen in the van will jump to the same "conclusion" lots of us are!

I hate to see someone get ripped off. I have had a number of dealings on the net, and I always try to send what is ordered quickly and see to it they get what they want. And to prevent that from happening to me, *I* would deal with old line, established companies and buy well-known equipment from legitimate factories--you know, the ones who have 1-800 telephone numbers and somebody in customer service I can talk to?? It is just that, while i have all the sympathy in the world for anyone who send money for a product they don't get, a buyer must beware. The problem is, the names NOName, DaveMade, Texas Star, Palomar, MoWatts, et al, will automatically (in most minds) be irrevocably linked with CB just as Yaesu, Collins 30L-1, Al-80 series, Icom, etc., are normally linked with Amateur radio. I mean, those of us who are familiar with the various accessories linked with radio just kinda "know" what goes with what just like one knows which tie goes which suit. We don't mean to be critical-it just comes to mind that way, OK?

I think what has been point out is that due to these "associations" that IMHO are only natural, and, yes, "assuming" that the NoName was to be used for the purpose for which it "really" was designed for, then a purchaser *could* have a "rah-thuh sticky wicket" insofar as legal recourse is concerned. In order to raise the issue of fraud, he then must cause

the authorities to become aware of the company with which he is dealing.
If, in the process of so doing, he calls attention to himself and *if*
his station is-was-will be illegal, then he *could* end up causing the
proposition to be more costly that the money he lost. I'm not trying to
be argumentive, I am just bringing up some points to consider. And I
believe, this was mentioned earlier. These are just thoughts and
questions and there are no "flames" to be inferred from it.

How many watts will this amplifier be producing?????
Really this will decide how much power you need, and then you will get the best advice from the experts here.

Hound dog.

That's strange. The 840 will do 100 watts as is on sideband, and likely around 25 to 30 watts dead key on AM. Not only that but it does work mobile too. Your not going to do much better with the setup you mentioned above in a mobile. Of course your not supposed to be using an amplifier anyway. So when I see something like what you posted, the red flag goes up, meaning is there something wrong with the rig, and that's why do you want to get rig of it?

Ah, you bring back memories, Jay! As a high school student in the 1960's, I bought a converted ART-13 and ran it on CW and AM for many years. In addition to the high voltage power supply (866 mercury vapors), I had 28 Volts at 10 amps to run the original relays and auto-tune motors.

On CW, the vacuum relay in the antenna circuit sounded like a machine gun when you hit the "dot" side of the bug!

I don't know what the radio weighed, but it's a miracle the aircraft got off the ground! My receiver was a BC-342, and it weighted over 50 lbs. The ART-13 was even heavier!
Jay added:
>When my Mom would entertain her Bridge Club, she would just try to
>ignore the Beast setting over in the corner looking like a old military
>communications radio shack.

Like a Paul Harvey broadcast, we're waiting for "The REST of the Story".....

(Sample ending: "When Dad died, Mom buried the Beast with him. Dad thought the radio was Heavenly; Mom called it the Radio from Hell. Hopefully, St. Peter got this sorted out in Eternity!") :)

Jerry, A ham may build 1 amp per year and it does not have to meet any spectral purity criteria, and it can be for One band use only, Imagine a first timer trying to build a tank circuit, matching network, power supply, bias circuit, etc for a first time amp. With a single band amp it is much easier, and much cheaper to build of course. Will the Noname meet the fcc specs I guess it all depends on how he builds it, is it class c, ab,b? tube , transistor? The noname as well as most all CB amps will fire up on 10-80 it is a HF amplifier and the transistors are 2-30 MHz.

Let me ask you this, assume you are a ham, and you went to a hamfest and saw a used noname amp sitting there for sale. Is it ok for you to buy it and use it on 10 meters ? Let me ask another hypothetical question. You are a ham and have never built anything in your life but you know you are allowed to build a amp

Can you have Mr. Noname help you build the amp, can he supply you with the parts? No One whether you are a Ham or not builds an amp from scratch, Motorola /Toshiba makes the transistors for you, amphenol makes the so-239, potter& Brumfield make the relay, Amidon makes the ferrite, Wakefield makes the heatsink, I guess you get the picture. Can mr NoName help me with the layout? It is not a 24-32 mhz amp until it is tuned and completly assembled. I think Texas Star worked around this with there CW Transmitter fake amplifiers.

Dwight thats the Ham holier than thow attitude. Have you ever tested a noname amp and I am not sticking up for noname at all but have you tested any amps on a Spec Analyzer? They are all hf amps 2-30 mhz now some will have more power than others across the freq range but if you built your own amp how do you know if it would compare to the noname as far as spec purity. the term CB amp is a farce a yasue or kenwood or any amp for that matter works 11 meters does that make it a CB Amp? My Cb amp has a LC matching network which is a 2 pole filter which reduces harmonics by 12 db the 1st harmonic is 35 db down Is that good enough ? Do you really know what is good enough? Don't get me wrong there are many poorly made amps out there that say cb on them but just because it is a "ham amplifier" doesnt mean it is the greatest thing since sliced bread. The only thing is they must meet specifications set by the fcc. So don't kid yourself

>No-Name will not respond and I haven't
>received a refund..

First, congratultions on being married ten years. Trucking is a difficult occupation which takes its toll on the drivers, and their families.

I hope the worst-case scenerio is not what happened: which would be if the FCC hit No-Name and shut them down, freezing their assets with the threat of a NAL. (Or, the alternative, the company runs with no capital in order to avoid the use of financial leverage by FCC, IRS, etc.)

>If I knew they were illegal, I never would have sent the money
>order..

That's the position you should stick with, especially if your husband is NOT an independent with his own rig. Otherwise, their is a chance it could affect his employment. Let me explain:

As you may have noticed in the three major Trucker magazines, there is an increased awareness among the larger trucking companies concerning illegal radios. If the company cannot show a specific, written policy which has been communicated to its drivers, it is subject to a fine if one of its rigs is found to contain illegal equipment. (Same as if a company has no Sexual Harrassment policy and someone files a complaint against an employee for a job-related incident).

Obviously, if you and your husband own your own tractor, you can do what you want. With the larger organizations, their legal departments have pre-arranged the following defense:
"Your Honor, it is our Standard of Practice
that all radio equipment used in the performance
of a driver's duties shall be type-accepted and
operated according to the appropriate Rules and
Regulations. This is a written policy which has
been communicated to all drivers in the following
ways....."

If you are Independents, check all conditions of contracts under which you haul for large corporations. This language sometimes is incorporated under the "obey all laws" clause.

The Trucking Life is hard enough. Don't let a radio add to the turmoil. And God bless you and your husband. Trucking keeps this country running!

White Chevy vans, Jerry? You mean, (shudder) that the guys in the black helicopters in my airspace have actually taken to the ground? And they actually drive around in white Chevy vans? My God, man! They got to you, too! Does anyone else know about this? Right after the closed circuit, infra-red monitoring system, motion and sound detectors, security bot, dogs, booby traps, and astronomy telescope (so I can see the government saucers the next time they come after me) I need to line the alley with nails. I KNEW it was only a matter of time.

I must interject. I would feel much more secure buying from a regular "known" in here than from an unfamiliar source. I would give the benefit of the doubt to a few regs in here concerning a purchase. I doubt this would be the place that a regular would try to burn someone. I am certain someone can cite an exception example, as one exists to every rule, but I don't think Tim is one of them. I am curious as to why you feel the rig may be messed up. Did it ever occur to you that Cobra 2000 sounds better on AM?

I'm looking for a guide on CB modifications or CB amplifiers (stuff that Radio Shack won't mention in their guides), and i'd like to trade a guidebook that I have entitled "How to Receive Free Satellite TV and Obtain Low-cost (or Free) Equipment", which is great. It shows you how to receive hundreds of free legal satellite TV feeds, where to get low-cost new, used, and even free equipment, and other information, advice, tips and resources. This guide is fairly new, not one of those typical old satellite TV books from the 1980's.

If you're interested, please e-mail me with details on your guide. I'd be interested in scanner mod guides as well.

Thanks!

Bing, my dear fellow:
Did I EVER say the poor sucker "deserves" to get ripped off? NO, I
stated
about dealing with the gray market area and the apparant lack of
integrity.
Read LOREN's recent post and QRM's words of consolation and advice, the
story
is about closed and so is this thread,

The lessons learned from an earlier post holds true, QRM was a lot more
tactful
and diplomatic on its delivery. A truly caring person does not hate the
sinner, just the sin.

All the best,
Martin

HI, CAN YOU REMOVE THE 2 DRIVERS IN THE GOLDEN EAGLE 1KW, IT HAS 2-20LF6'S DRIVING 6-20LF6'S, AND USED IT AS A HIGH DRIVE AMP, THE AMP IS BLACK IN COLOR, HAS 2 METERS , WITH A PRE-AMP,AND MODULATION BARS IN BOTTOM RIGHT CORNER, ADJUSTABLE SSB DELAY AND ADJUSTABLE WATTAGE, I DON'T KNOW IF IT WAS MADE BY GENRICH OR NOT, THEY WERE BROWN IN COLOR, THANKS ,
....

1184. WANTED: Quality Tube AMP!

Newsgroup: rec.radio.cb
Date: 2001-03-17 02:12:35 UTC
From: masterchief516@home.com
Message-ID: <nKzs6.428205$ge4.151006479@news2.rdc2.tx.home.com>
Source record: 75494

Hello, I would like to buy a QUALITY tube amp that runs on REAL RF tubes!

Approx 350 to 500 watts is all I want. A preamp is NOT necessary.
26.9 to 27.4 is all the bandwidth I need. The radio is an AM only radio
so SSB is not required. It should run on 110V AC.

This is not a joke. Please respond to PRIVATE e-mail (or to the group).

Let me know what the drive should be and the tube compliment. Rumor has it
that a QUALITY amp is made in Oregon somewhere. I don't know.

If you can help me, I would appreciate it!

I used to own a 300a and liked it. The power was perfect but I didn't like
the tubes. 572Bs should work good if driven correctly I would think. Or
even 6146s. I DON'T want a KW! 350 to 500 watts of CLEAN power on AM is
what I want.

Any suggestions or is there anyone out here who is capable of building this
perfect beast? I do not want transistors....thanks, but no.

Master Chief

Congratulations on the realism. AM linear service is a bitch: you do have to run them fairly low on the curve to keep linearity and have a high duty cycle with the carrier so cooling is a major consideration. I would personally run whatever tube is selected AB so your 300 watts out will also give you about 400 in heat, not a lot less in Class B. With a 165 watt per tube plate dissipation a pair of 572s is marginal at best and 6146Bs at 35 each is unthinkable. This is one reason broadcast stations did not use linears except in odd cases. With CB being the only service left on AM, there is not a whole lot of expertise in the area, particularly where cleanliness is a consideration. Don't be too surprised if a quality amp builder suggests something like a pair of 4CX250s with forced air cooling, chimneys, the whole schtick. Doing it right will not

be cheap.

Good luck.

Dick N&#65533;BK and DSJO, very jr grade.

>Hello, I would like to buy a QUALITY tube amp that runs on REAL RF tubes!

Is there any particular reason you want tubes?

>Approx 350 to 500 watts is all I want.

That's quite a bit, considering you can work the globe with 100 watts
and a good antenna, or 10 watts and a very good antenna.

> A preamp is NOT necessary.

That depends on the drive requirements.

>26.9 to 27.4 is all the bandwidth I need.

How about something that includes other bands, just in case you ever
decide to get your license? And that way the FCC might not destroy it
after it has been confiscated.

> The radio is an AM only radio
>so SSB is not required.

If it's linear, it doesn't matter. An amp can be built to demodulate
and remodulate at class-C, but at this power level it would be
overkill.

> It should run on 110V AC.

Any amp will run on 110VAC provided you have the correct power supply.

>This is not a joke. Please respond to PRIVATE e-mail (or to the group).

>what I want.

It will take quite a few 6146s to get 500 watts. A pair of 4CX250s or
a single 5-500A with reduced drive will get you there with much less
hassle. But if you really like the glow, there are many other options.
The only real problem is the power supply, and that's not hard if you

know how to handle a couple thousand volts.

>Any suggestions or is there anyone out here who is capable of building this
>perfect beast? I do not want transistors....thanks, but no.
>
>Master Chief

I can custom-build any amp to specs, but be prepared to pay. If you
want to use it illegally, then expect to pay upfront. I recommend
getting a license.

Hello QRN2000

Yes that story does bring back memories, I have had a lot of e-mail on this story. This was reposted by request. This story was published in Woody's Worlds CB Gazette a few years ago. His Gazette's are now collectors items. And he is writing a book on CB radio, and the CB boom, he just has so much material, its difficult to wade thru all of it. See Woody's absolutely great web site at:
http://www.cbgazette.com/gaz1.html

Qrm2000 wrote:
>
> Ah, you bring back memories, Jay! As a high school student in the 1960's, I
> bought a converted ART-13 and ran it on CW and AM for many years.

It was a barn burner on the CB band. The two 811's plate modulating the single 813, sounded great. I think the old carbon mic added a little dissertation that gave the transmitter a distink sound.

The High School that I went to, (I didn't attend it willingly) had the old Graymark 505 AM Transmitter Kits that you had to build, and test and take measurements along the way as you were assembling it. It had a 12AX7, and two each 50C5 tubes, but had very little output power, and couldn't be heard over any distance that a radio buff type teenager would be interested in. One of the radio surplus outfits in down town Los Angles had a sale on military items, and the BC or Broadcast Band Oscillator for the ART/13 (that fit in the top center of the ART/13) was one of the items that was offered for sale.

I took the bus down to LA to but the Broadcast Band Oscillator, plug in unit, I got two of them, Dad never missed me, it took all day to ride the bus.

The manuals for the Broadcast Band Oscillator were very well written, I had the ART/13 on the broadcast band in nothing flat, and the 300 foot long wire antenna worked great. Mom drove us down to the freeway about 8 miles away and you could still hear the ART/13 signal loud and clear.

WE had the ART/13 working so well on the AM Broadcast Band, that fellow students wanted to know how to soup up their Graymark 505 AM transmitters. I had a bunch of friends over that would take turns talking into the mic and making all kinds of neat sounds. Sounds like us today on 2 meters, we had a great time.

> In addition
> to the high voltage power supply (866 mercury vapors), I had 28 Volts at 10
> amps to run the original relays and auto-tune motors.

Yes this sounds like the old Military Power Supply. As a novice to such large radio type things. I had looked up in the old RCA transmitting manual the 866 Mercury Vapor Tubes, I thought that there where gassy or had both of them has developed a leak in the vacuum seal of the tubes. But the old RCA Transmitting Tube Manual, had a application note that set the operator straight. And as a young teenager of course the old hams would try to ask the age old question about the rectifiers tube being gassy. So after a few of these zingers, I had memorized the application note out of the RCA manual, and would repeat it word for word and explain to them all the 866 rectifier tubes were working just fine. But was still a novice on most other radio things.

> On CW, the vacuum relay in the antenna circuit sounded like a machine gun when
> you hit the "dot" side of the bug!

I never used the CW function on the ART/13's I got to play with. It had a MCW Modulated Continuous Wave mode that was neat to hear.

> I don't know what the radio weighed, but it's a miracle the aircraft got off
> the ground!

If I remember right it was made for heavy long range bomber type aircraft. It was defined in the TO manual for the radio.

But smaller aircraft like the Lockheed Skunk Works P38 Lighting had these monster transmitters in them, in some configurations. Maybe voice tramsmissions for re-con missions?

> My receiver was a BC-342, and it weighted over 50 lbs. The ART-13
> was even heavier!

Yes the ART/13 was a real monster, size and weight wise. I used a National NC-303 as a receiver, that had come with all the surplus radio equipment that Dad had picked up from all his ham buddies.

The function of throwing switches to go from transmit to receive was work.

> Peter got this sorted out in Eternity!") :)

> QRM

The Beast was sold for some where around 1000 dollars if my memory serves me correctly. Amateur 2KW input amps would not do what the Beast could do for a lot more money. We had moved several times is a year or so, and one of the CB'ers offered dear old Dad a cool grand, and would

offer the Beast to be transported all we had to do was unplug it. Well Mom said go ahead and sell the damn thing and keep the money for whatever, and that sealed that fate of the Beast.

One of the old ART/13's that I had put on the Broadcast Band had survived! Just after being married, and moved into a new neighbor hood. I noticed a distinctive noise on my AM radio in the garage. Someone took the radio station completely off the air. The audio was of teenagers making all kinds of noises and such. The belching contest hour was differently was not a normal broadcast type of thing. I found the old ART/13 just down the neighbor hood a block or two down the street. I could see the kids standing around the old ART/13 transmitter, having a ball.

I stopped, and walked over to the open garage and told them that I was the guy who had gotten the ART/13 on the broadcast band, and offered them any help if they needed. For a moment it was dead silent, then one of the boys bust out and asked how do we make it transmit farther. Well I replied read the manual, 300 feet of wire will work wonders, and I would give them the wire if they would keep off my favorite oldie but goodie AM station. A deal was struck! But at times I could still hear my AM radio station being taking out by a sweep of the VFO Dial down a block or two. The 300 feet of wire in the tree's worked just as it did back in the 1960's, great!

> I
>would give them the wire if they would keep off my favorite oldie but
>goodie AM station.

Great story!

I used to browse the Surplus houses (Fair Radio Sales). I knew the Broadcast Band VFO existed, but I never ran across one.

You're right about the carbon mike and its distinctive audio! I heard about a mod to convert to something better, and that's what would have made a great AM transmitter!

The original configuration was a pair of 811's modulating the PLATE circuit of the 813. What a great set up. With the mike change, it would have sounded like a broadcast station.

Yrac

Q. How many CBers does it take to change a light bulb?

A. Zero. Real CBers are not afraid of the dark.

>It is a good looking radio, but for the
>money that they want for one (The saturn turbo), you could buy a
>slightly used ham HF radio and have more features and a clean 100 watt
>output.

I agree. But there is *something* about the black panel, Chrome handles, and all those meters and knobs!

I remember the day I saw my first one. I walked into a CB shop and the owner had one set up beside his repair bench. It was love at first sight.

"I want one of those!" I exclaimed.

They told me the price.

"I didn't realize they were sold by the pound," I responded. "But ring it up. I want it!"

$10/lb for a radio! More expensive than steak, but look how long they last!

Ahhh, Jerry just used, "white vans" out of convenience. I thought I'd have fun and run with it to avoid having to accept and deal with the reality that the feds really are out to get us. Besides, everyone knows they don't drive on the ground. They fly in black helicopters and bombard us with invisible waves from RF guns as part of thought control, only it's not perfected yet, which is why some undesirabes still exist.

1202. Re: WANTED: Quality Tube AMP!

Hello Donald: Yes the 300A where good amps, but always something breaking down on those, and the tubes are prety expensive to replace. The tube sockets where cheap, and the plate cap connectors would fall apart if moved to many times. And the diodes in the voltage doubler circuit where constantly shorting out causing the fuse to blow.

If you can find a old Pride DX-300 amp, it uses a single 4CX250B ceramic tube. It can do the power levels you menation. But remember that a truly linear amp for AM, you want the dead key RF carrier to be one forth the PEP, say dead key at 100 watts and modulate to 400 watts. And you will need a peak reading wattmeter to be able to see the 400 watts, or you can see on a bird wattmeter knowing what the average reading are.

The old Yaesu's FL2100 used a pair of 572B's. I have seen these amps dead key at 125 and swing to 500 with a Yaesu 902M driving them, great audio quality.

Someone said here that a pair of 4CX250's in Class AB1 or class B push-pull would be a great amp also. I agree. Dennis and I talked about a amp using a pair of 4CX250's or 350's or 400's or 800's. the great thing here is that that the amp could be made to work off the drive a standard CB radio. But the cost and time involved would be a long one I would think, not a project for a begener. It might be cheaper to just buy a good ham rig and amp.

On Ten Meters, around 29 MHz there's a bunch of guys who still use AM radios and linear amplifiers. There great to listen to. There's also a magazine published just for the pld AM stuff, but I can't recall it's name right now. Maybe someone can recall the name of it.

Ah yes, the wonders of Peak Reverse Voltage strike again. And the problem
of meeting a price point when one is making bathtub gin.

>

The need to keep linearity over the 4:1 range is the major problem of
building AM linears, no doubt about that. There are a number of approachs
to the issue other than peak-reading meters, I was always partial to
trapezoid patterns on scopes and simple linearity detectors -- basically
Wheatstone bridges.

Assume you are reading peaks. That is well within the tolerances of
572Bs.

Great Shitpots of metal bending but not all that remarkable. The trick,
as it is I am sure with your fine antenna designs, is to have it all
worked out on paper beforehand before digging out the old Greenlee
punches. This also lets you recover from turning white and shaking when

you price it. There are ham rigs capable of 300-500 watts of Ancient Modulation but they are also capable of legal limit on SSB etc. AM is an afterthought.

>
> On Ten Meters, around 29 MHz there's a bunch of guys who still use AM
> radios and linear amplifiers. There great to listen to. There's also a

You will find hardware older than either of us perking away, converted CB rigs of all vintages including amps that are run somewhere near linearity, brand new rice boxes but not all that many decent linears. When AM was king on the ham bands you did it high-level modulated Class C finals, something like a pair of 811s (better modulators than rf amps BTW) modulating a tungsten plate 813 glowing merrily at 500 watts or so. The linear amp came in with SSB because the power outputs available were low: The early Central Electronics phasing sideband rigs had all of 10 or 20 watts output. Most of the hams of that vintage, raised on the MOPA (master oscillator, power amp) designs had to relearn everything they ever knew about amps and especially power supplies.

When the sideband rigs started to put out decent power barefoot, the problem turned to matching the rig to the amp, using more drive than you needed, and the grounded-grid Class B linear was born or rather staggered into existence. So the classic linear designs, 3-500Z (the Z means zero bias) or 811/572B four-packs biased from a spare 6.3 winding and the voltage doublers you so love came to be. These are totally useless with only 4 watts of drive.

During this period, Eitel and McCulloch, EiMac brought out their line of tubes for military and broadcast use. The tetrodes (numbers beginning with 4) were rugged and very sensitive so that 5 watts could drive 500 with ease. These progressed thru the dash, X, and CX series, generally lowering plate voltages and increasing current draw for a given output. The standard 5 kw FM rig of the 60s was a 4CX5000A at something like 5.5kv and 1.2 amps. Incidentally, the 5000 was the plate dissipation if you cooled it the way EiMac recommended so it would do 5kw into a dead short for days.

But AM was outlawed on the Marine freqs in 1972 along with most military and aircraft usage and the SSB revolution took over the ham bands so there really was never a demand for AM linears even to extend the life of old hardware. There are no magic bullets available at 29 MHz.

AM amps are a funny dog. The big enemy is just pure heat.

Actually Kari the man makes a point. You will hear better Castilian Spanish in Havana and South Florida than you will hear in Castile; the Cubans take great pride in it to the point of referring to other Spanish speakers as 'wetbacks' (term derived from swimming the Rio Grande).

Now when low-class looking to be high-class ladies in the LA basin affect the Castilian lisp, the most notable example being Marcia Clark of OJ Simpson trial fame, it tends to cause us Mid-Continenters to throw large and heavy objects. Had I been on the Simpson jury and had to listen to her, they'd have been trying ME for murder; might have lasted two weeks before strangling her.

Ha! I forwarded your post to my wife. She watched it at one time. I swear, I never saw the show, not once. Not much for tee-vee. Wasn't that long ago she persuaded me to get rid of the "Kill your television set" bumper sticker, and the only reason I gave that up was because the vw bus just had to go..a sort of birth control thingy. Truly the magic bus. Anyways, I do like a good documentary here and there, but I must confess, as I was sitting here one night pounding the keys, I heard some pretty funny stuff coming from the TV room. If she would have closed the tv room door, it never would have happened, but alas, I'm hooked on the "Sopranos". The boss is one funny dude, and that goon of his, ya' know the one with the Elvis hairdo, permanent scowl, and always shaking his head, well that just wraps my Sunday night. I have nothing to compare it to as the last tv show I watched on a regular basis was "Room 222", or maybe it was "Welcome Back Kotter".

Those that assume something is wrong with Tim's 840 better think again. I borrowed a radio and got on 27.580. After wishing a couple of Irish guys Happy St. Patty's day, I called for and got an answer from KP-82. That radio sure sounded good in my little mobile. Nice talking to you, Tim.

Happy St. Patty's Day to all, and if you drink too much green beer, you may pee green!

SPRING CLEANING!

Anyone looking for some older radios? I have a couple mobiles here. AM and AM/SSB.
Walkie Talkies too. These radios do work. Have some too that don't, and may be able to be used for parts or maybe repaired. Radios brought here and left. Have some older portable and base scanners too, if interested. CB xtals, scanner xtals, lots more.

Mics and mics for parts. One particular mic is a Turner Single Sideband mic and the one for parts is "Similar" to Turner in make. Unsure of it's manufacture at moment. The SSB mic was working when last used, not sure about now. Other things here. Cleaning out inventory. Can send an e-mail of items on display, but if looking for anything specific, ask!
I have some things not on display, I can dig out.

Postal money orders only accepted and gets same day shipping as funds received. See below for rest of details

Hello Yrac: How did you came by to be called Yrac?????

Yes the old carbon mic was a give ah way that I was on the ART/13, but did sound kind of neat. If we made it sound like a broadcast station, that might have been to much for us kids to handle!?!?!? We piped the audio thru a .1uF cap for music on the broadcast band, the audio wasn't all that great but we did get requests until the old man found out we where broadcasting his phone number out over the air.

Yes CB'ers ain't afraid of the dark, I wish I had a nickel for every time the lights went out from the circuit breaker poping open.

Had to pull the 20 amp fuse out of the heater motor in my F250 truck, for the linear, in the very cold cold weather. The fuse only lasted a few key downs, but some aluminum foil from a gum wrapper was used to keep the amp humming. The truck got real cold. I pulled in to a gas station for a pack of 20 and 30 amp 3AG fuses, as I remember I gave em a 10 dollar bill and just got a few cents back, I didn't complain. Neither did the ol lady with her freezing feet.

Okay, I'll accept that. One of these might make a good project for a ham without the skills to start from scratch. However, once all the filtering is added, it probably wouldn't be the cheapest way to go (a ham linear would probably be cheaper), but that seldom stops the person determined to do it himself.

I'm trying to remember the exact wording, but I think its one of a particular design or something like that, Jerry. In other words, a ham can build more than one amplifier per year, but not of the same design (or type, or something like that). The idea is to allow the ham to build as many amplifiers as he wants, but limit the potential to sell those amps.

I'm not sure that would change this situation. True, the fact that
No-Name is selling these things may make the judge more sympathetic, but I
don't know if that would be enough to override the long-term legal tradition
I described.

Sorry, I wasn't trying to present that attitude, BadaBing. And, no, I haven't looked at the No-Name on any test equipment. However, I have looked at a lot of other amps like this and have yet to find any that I would use under my ham license if I wanted to keep it.

Da Yoo Pee Der Hey

Glorioski. You can spread joy, happiness, a 5-tone Roger Beep, an Echo Board, and the Ishpeming Stompers version of the Half-fast Waltz (not too slow, not too fast, just half-fast) over 5 MHz of spectrum. Now ain't that precious. Haven't seen so much technical achievement in one place since the Army's Divad unlocked from the radar target and shot hell out of a PortaPotty.

There are a few yo-yos who will jack you up about the illegality of it but I will simply ask WHY??
You cover the 10 and 12 meter ham bands in their entirety, CW, data, and FM portions included. For all I know the radio might even perform so far off of design-center. Just who do you expect to talk to? Amateur rules prohibit talking with a pirate and even without the rule after the Roger/ Echo routine most could not contain the laughter long enough to respond.

Around our house things that had no use but took up a lot of space and needed dusting were called Dumflotchies. About all I can do is congratulate you for what has to be one of the more monumental dumflotchies I have seen in a long time. Must be those cold nites in the UP.

Dick NBK

The largest gains in range will be found in the antenna , use quality coax ,
4ft. firestik and
tune the antenna for 1.1:1 SWR @ 27.185Mhz.
A Cobra 25LTD would have been a better choice .

Actually, there may be hope, Jay. I'm in touch with several writers. When you read their work in, say, TIME Magazine, the sentence construction is excellent and the spelling is correct.

When they send an E-Mail, it's as different as listening to Jim Nabors (Gomer Pyle) sing. You want to ask, "Is this the same person?"

A 7 foot Firestik greatly out performs a 4 footer. My KW-7 gives
incredible range barefoot. Over 50 miles on sideband from my mobile.

FWIW, KMart is selling the Cobra Ultra 19 (2) for 44.99 this week.
I'll stick with my Uniden chassis, thank you.

1261. Problem with antenna, PLEASE HELP!!!

Newsgroup: rec.radio.cb
Date: 2001-03-18 14:27:13 UTC
From: BC <basketcase_910@hotmail.com>
Message-ID: <tb9hdj141p74cd@corp.supernews.com>
Source record: 75686

Hi thanks in advance for any help:
I have just purchased a fiberglass whip and ball mount from radio shack for my cobra 148. I proceeded to install it all and when I did got a terrible match (1:5 or so) after tuning I was able to get it down to about 1:4 which I know is still terrible. So thinking that it might be either the mount or the antenna I returned both, got a mirror mount and the same type of whip and installed it (half of the mount not on, the other half bolted to the back of the cab of the truck) I am still getting a TERRIBLE MATCH! I don't understand, I have installed antennas before and never had a problem like this. My first thought was that there was a problem with ground, so I made darn sure it was grounded. My second thought was that the ground and plain might be touching somewhere so I looked from the top of the antenna down to the end of the coax which the radio is hooked up to and found nothing strange. Like I said I have installed antennas before and not had a problem but before I had a separate swr meter, could that be it? Are the internal swr meters known for giving incorrect readings (especially that incorrect)?
Thanks again
BC

Are you trying to say that the swr was 1.5:1 or 5.0:1? Yes, a 5:1 match is terrible and highly unlikely if you installed a new out of the box antenna correctly. a 1.5:1 match is not horrible though it could be improved upon. Use the analyzer on the the coax before you install the radio.

I wondered about the KW7 Scott, being a 3/4wave top-loader is it better than
the 5/8wave design?
Also with it's 7ft. length will it clear a 13'6" bridge when mounted on a
truck?
That was a concern when i recommended the 4' firestik.

Does anybody know where I can find a manual for this antenna, I have lost mine and it has some elements broken and I need to try to find a source for aluminum tubing to repair it and I need to know how long they were.

Thanks

What type of coax are you using and how long is it?
I recommend using 21' of RG8-X or RG58A/U with Amphenol connectors, this should bring
the SWR down.
Personal experience has shown me that 102" whips enjoy that length of coax.
Throw away the RG174 if that is what youre using (the small diameter R/S coax).
Their cable has very high attenuation and poor shielding, also the connectors arent soldered
to the conductors.

Oops, one more thing i forgot to mention. 102" whips use the bottom half of
their length for T/X.
Because of this they dont like any metallic objects in their near-field.
The antenna may be getting a reflection from the cab-roof, I noticed that
you mounted the antenna
to the back of your cab, above the back window would be ideal or at the back
corner of the bed.

Do the math, the driven element is 1/2wave in length.The first reflector is
5% longer and the
first director is 5% shorter.This link will help you-
http://www.diana.bib.uniurb.it/arrl/yagi.htm

Are you tired of having to weed through all the crap on the newsgroup,
dealing with message boards that are out of control?

Check out the Radio Classifieds.
It is a board designed to do away with the trolls of the internet, and
make a nice place where Radio enthusiasts like myself can post their
wares, trade, or get help information.

There are many features to this board and is very close to the
"Infopop's Ultimate Bulletin Board".

There is a wide variety of topics, like CB Radio, Export Radios,
Microphones, Test Equipment, Antenna's, Modifications, Ham Radios,
Parts, Home Entertaiment, Car Audio & Video, plus much much more.

Come by and join up today. You will be glad you did!

The Radio Classifieds:

Source record: 75805

Hello Teddy Banks:

HY-Gain will sell you the old out of production antenna manuals for 5 dollars. The phone number is 800-973-6572

Hy-Gain used (and still does on their new beams) a construction technique called swag reduction. What this does is reduce the aluminum tubing diameter to a smaller diameter to allow the next smaller size diameter tubing to fit inside the reduce swaged tubing.

This is done for two very good reasons:

1) It allows the aluminum tubing to be tapered to a smaller sizes, allowing the elements to be lighter, while still being very strong.

2) When aluminum tubing is sold in mass quantities, (they don't tell ya this in the books) differences in wall thickness will raise their ugly head. Most aluminum tubing used in antenna construction is .058 inches in wall thickness. Just under a 1/16 inch. This allows tubing in 1/8 inch increments to fit inside each other, or telescope inside each other.

Example: 1" .058 wall thickness tubing will allow 7/8 inch diameter to fit inside.

7/8 inch .058 wall thickness tubing will allow 3/4 inch diameter to fit inside, and so on.

Now the reality bits ya in the ass.....
Most aluminum tubing wall thickness has a tolerance of + or - 10%
This means the aluminum tubing for .058 inches wall thickness can be + .0058 or -.0058 inches difference in wall thickness.

If the tubing comes from the manufacture with a thicker wall thickness of +.0058 inches, the wall thickness will be .058" + .0058" = .0638". So now the smaller size tubing will not fit inside the too thick wall thickness tubing now. Let me tell how this will humble ya.

Because of the tubing wall thickness (crap shoot) problem, reduced swaging is a good thing allowing the manufacture not to worry about the tubing wall thickness tolerances.

However, most modern aluminum tubing 6061-T6 and 6063-T8 tubing is pretty good about keeping the tolerances very close to .058 inches wall thickness. But when I walk into the aluminum tubing store, I have a few samples of tubing, to make sure all the tubing pulled off the racks is well within my allowable tolerances.

Most metal supply houses, have left over pieces of tubing called Rim's
that might have what you want. Just ask em.

The Hy-Gain reduced swaged joints can be replace very easily. If I
remember correctly, there 3 sizes that make up the beams elements.
are:
1) 7/8" tubing reduced swaged to 5/8" about 24 to 30 inches long
2) 5/8" tubing reduced swaged to 7/16" about 50 to 60 inches long
3 7/16" tubing, has no reduced swag, about 52 1/8" inches long

If you have the manuals for their present 20 meter, 15 and 10 meter
beams, it's very possible that they may have replacement tubing in
stock. But with different part numbers that whats in the CB 5 element
beam manual.

The 7/8" tubing can have a short 4", 3/4" .058" WT tubing adapter sleeve
put in the end to allow the the 5/8" tubing to fit inside. You may half
to cut the adapter sleeve length wise, and use two hose clamps to make
it tight.

1/2" tubing will fit inside the 5/8" tubing without any adapter sleeve.
Or the 5/8" tubing can be cross cut length wise, about an inch long, on
the end, and the 5/8" will just reduce down with the hose clamp to
tightly hold the 7/16" tubing.

Use good stainless steel marine grade hose clamps.

Hope this wasn't too much info, and hope this helps.

Jay in the Mojave

Thanx again Craig, i dont consider myself better than the next man.
I am simply a person with a quest for knowledge that does'nt mind sharing.
I noticed BadaBing wasted no time in looking up my personal information in a
vague
attempt to discredit me, i suppose the info he attained makes me less of a
ham.
I have a very special place in my Outlook Express program for people like
that.....
Take care Craig.

> the 5/8wave design?

A 5/8 wave won't tune, it has to be extended to 3/4 wave with a matching device.

> Also with it's 7ft. length will it clear a 13'6" bridge when mounted on a
> truck?
> That was a concern when i recommended the 4' firestik.

Mine is on the trunk on my car and on the bumper of my Jeep. Both are below
the 13 6 mark. Other then being directional, they kick ass. The fact I can
aim my signal works great for DX. I've been told the difference is 3 to 6
DB depending on the other guy's meter. I can knock down an offending signal
and still talk to another party. And coax length does NOT matter. They work
as good with 18' as with 7' of RG-8M. I use real grounded mounts, no magnets.

1.5:1 is what you can expect with a 1/4 wave whip. This is because it is a
36 ohm antenna. Anything greater then 1.5:1 is cause for alarm, but the loss
at 1.5:1 is nothing you will notice and you will waste your time trying for
a lower SWR. And remember, coax length does NOT matter. You can't change your
SWR with 50 ohm coax, only with stubs of different impedance coax.

> I thought tubes were used mostly for amps beyond 1kw due to heat.
>
> --
> Sincerely,
> Ken

That is certainly one reason. There are others.

1. Being able to use one or two devices (tubes) rather than many in parallel cuts the risk of cascading failure.

2. Even at 20 volts (yes there are 50 volt transistors) a kw is 50 amps which is a mechanical challenge to get out of a power supply let alone feed it. Unless you own stock in a copper mine there are advantages to higher impedance circuits. If w is heat loss, remember W=I**2 times R.

3. Transforming the resultant .4 ohm collector impedance to 50 ohms takes some remarkable tank circuits. The 5-6 k of a typical tube circuit is a whole lot easier to deal with.

I am waiting to see what the threatened 42 volt electrical systems in newer cars will do. Keep your eye on power FETs and FET amp modules.

It seems rather odd to switch from one setup to another where there appears
to be little to gain.

> Did it ever occur to you that Cobra 2000 sounds better on AM?

That's possible. However Tim did not appear to be much of an "AM" operator
from looking at his past activities, more like SSB above the legal 40. I do
have to admit some modern ham rigs don't do AM very well. In some of those
cases replacing the standard built-in AM filter(s) seems to help a lot. It
might pay to look around for something like for the FT-840 instead of
screwing around with another setup.

That's what i came here with but i have gained tremendous knowledge from the group,
my thanx go out to everyone that contributed.
I made the mistake of posting my call letters and letting the cat out of the bag by identifying
myself as a "ham".
I always made a conscience effort to help when i could and avoid confrontation,but it has been
made clear to me "i am no longer welcome" on this group.
Good Luck and 73's to all of you.

You were inquiring about a mobile HF setup in another thread. Specifically one with an HF amplifier. I just put two and two together.

> its a old collectors qaulity large sized base rig when in good shape and worth alot of > money. almost as much as a 840.

To each his own as far as collecting old rigs. About it being worth as much as your 840, well that's up to you.

> why are you always trying be a dick?

Why do you insist on operating as a illegal radio priate Tim?

> its clear you have no idea what your talking about when it comes to anything hf
> or cb.

What you really mean is when I catch you with your foot in the mouth. For example the time you claim that 27.700 was not a UK frequency comes to mind. You made the same comments then as you just did above. I had to finally post the the URL, from a CBer web site no less, with the UK frequencies listed. Funny how you dropped out of sight after that, and then changed your frequency, 27.700, for SSTV to it's current value on your web site right after that too! Hum........?

> i want a good 2000 to be sitting next to all my turner mics i have. i'll
> be able to buy another 840 or something better anytime but it wont be much
> longer when all the good 2000's are gone for good.

Better start saving your money then.

A HAM GOD IS DETERMINED BY THE FOLLOWING FACTORS:

1. CAN RECITE TITLE 47 CFR BY ROTE.
2. ABLE TO RECIEVE RTTY, PACKET AND PSK31 BY EAR.
3. ABLE TO BUILD SSB TRANCEIVER FROM JUNK BOX AND BY MEMORY.
4. OPERATES A FIELD DAY STATION WITH NO BATHROOM BREAKS.
5. DICTATES CW MESSAGES FROM MEMORY.
6. HAS SCRAPPED A TV SET TO GET ON 160 METERS.
7. CAN WORK AUSTRALIA ON 2 METERS WITH 5/9 SIGNAL.
8. CAN DO TELEPATHY ON 75 METERS.
9. CAN TRACK UNKNOWN SIGNALS WITH ONLY A STOVE PIPE SHIELD AND A
HANDHELD.
10. BUILDS QST PROJECTS JUST TO RELAX.

THIS LIST PRETTY SPELLS OUT THE REQUIREMENTS FOR BEING DESIGNATED AS A
"HAM GOD" ALL OTHERS ARE IMPOSTERS.

LITTLE KNOWN FACT:

MOST RADIO GUYS (AND GALS) BELIEVE THAT WITH A BIG ANTENNA, POWERFUL AMP
AND A WONDER RADIO THEY ARE THE CHOSEN ONES.

THE SAD TRUTH IS:

THEY ARE A GREAT PAIN TO BE AROUND, AN EMBARRASSMENT TO THE HOBBY
AND IT GENERALLY ANNOYS THE NEIGHBORS.

BEWARE THE RADIO GODS.

Good Lord, why? Everyone with an interest in radio at some point takes the Amateur exams unless he likes buying his gear at the drug store. And everyone starts at the bottom. So you have a three-month old Tech, BFD.

I have said many times that I do not consider the Tech as an entry-level license. The old Tech Plus was. There are many reasons for my outlook but none of them are that serious until you develop Lifer Tech Syndrome and become a pain in the buns to CB and the Amateur Service alike. You may or may not have encountered Leland Scott, the poster boy of the decade for LTS. Lifer Techs are the source of most of the animosity created on this newsgripe.

The key point here is that CB and HF Amateur are simply two facets of the human urge to communicate and fiddle; they are different for sure but not rivals. It is not necessary to be one or the other. So being judgmental -- from either direction -- is pointless as is pigeonholing each and every body that wanders by. You were pigeonholed, blow it off. Not every problem in the world is yours and in no way are you responsible for suppositories inserted sideways. Learn from it and move on.

You have arrived at an interesting point, haven't you? So what do you plan to do about it? Before you start having a vested interest in the status or lack thereof of the Codeless Tech might I suggest taking the time to turn the 3-month old Tech into a 6-month old General? Download Morse Academy from http://ah0a.org . Set it for 13-16 wpm characters at 6wpm and go to it. One quiet day, it will become clear and you will come out of the fog a Plus. At some point you will take up using Element 3 for bathroom reading and it will become clear as well. It is

the Drivers License book on a larger scale; you won't know any more electronics then than you do now.

The plus allows you to utilize any gear you may have on 28.3-28.5 and if you find you like dittybopping on the four old Novice bands. It also allows you even at a young and tender age to engage in stirring up the Lifer Techs. Maybe you can piss off Leland, too.

Ham
> License? Thanks!

To your specific question http://www.arrl.org and press the Licensing
button.

You will also want to bookmark http://www.qrz.com for sample exams and
http://ah0a.org
for Morse Academy, a tried and true piece of freeware that has been used
by everyone from hams to the military.

There are four exams in the Amateur Service leading to 3 1/2 licenses.

Element 1: Morse at 5wpm. Characters are sent at 13-16 but spaced to 5.
You pass by getting 25 of the 125 plain text in a row or 8 of 10
questions.

Element 2: A pretty basic written exam for which many good books are
available.

Element 3: In which the FCC discharges all its obligations under treaties
and other Federal laws and takes you thru a lot of ways to get in the
soup. The most technical thing in it is sunspots.

Element 4: Advanced exam that I won't discuss here.

These elements combine as follows:

Technician: Element 2. All privileges above 50 MHz
Tech with Code Certificate: adds 28.3-28.5 phone and four old novice code
bands.

General: 1,2,3 All amateur bands but not all freqs within them.

Extra: All amateur privileges.

If you have any questions after the research, feel free to rattle my
e-mail.
Were you a good friend I would urge you strongly about the head and
shoulders to get the code going.

Thanx Richard,
I have passed all the General class practice tests at
100% and i have been ready to take the General class exam, the way i
understand it is i have 1 year after getting the General ticket
to pass the code test.
My commercial driving career has kept me very busy but i will find time to
learn C/W.
I let my guard down and got very annoyed albeit temporarily, the kill-file
grew in size however.
I greatly value the knowledge i gain from you,Sparky,Bill,Jay & others.
Thanx for the support.

If you took it and passed you would get a cert good for 365 days to be used in lieu of taking Element 3 again.

Back in the days before compooters we used some tapes from 73 Magazine which are no longer available. They were just a cassette of 6wpm groups with the 13-16 letters. I used it to get to 20 for the Extra at that time and used the 6 teaching. You might be able to do it yourself with a software program -- it is tough to get the levels straight on square-wave audio.

Pull down Morse Academy from http://ah0a.org and maybe you can come up with a way; there are lots of approaches that work.

Good Luck

Dick

Okay, but the vehicle in question is a semi-tractor with west coast mirrors,
the KW7 won't
clear the bridge, 5' may be the maximum length that will clear.
Almost all modern trailers are 13'6" high, the 14' are all but extinct.
The longest antenna is best as long as it does not extend beyond the height
of the trailer.
I did not understand what you said about not being able to tune a 5/8wave
top-loader.
Please explain........
I have tuned a dozen of these with great success, their not very
broad-banded but work okay
on C.B.
A matcher simply fools the radio by presenting it with a 50ohm load
impedance, it wont change
the resonant frequency of a antenna.
A significant Impedance mismatch would present itself with a high SWR.

Hello all:

I bought a Grant LT awhile back and found it to be a excellent
reciever. Both on AM and SSB. I was wondering about the
people I hear on LSB 38. Calling from many states and even
the guy across the street. Do these people have great antennas,
good skip, or using power? The guy across the street has a Antron
99 in his tree. His townhome doesn't allow antennas on the roof.
Thanks

1338. Re: LSB 38

Newsgroup: rec.radio.cb

Source record: 75764

Its a combination of all three elements. However, with the right skip conditions I have hit people with 30db's from thousands of miles away with only 3.5 watts swinging to 15 through an old Antron99 about 50 feet in the air. A bare bones decent system would be a an Antron99 up in the air with the base of the antenna at least a wavelength above the ground, through some RG58 coax with the SWR below 1.5, so that your wattage actually radiates out from the antenna. You have a good radio, and with the low cost system decribed, you can talk thousands of miles when the skip conditions are right. A linear will allow you to kind of create your own favorable conditions, making up somewhat for any lackluster skip conditions, but brings possible negative baggage along with it in the form of increased chance of your radio signal bleeding over onto your neighbors televisions, stereos, computers and phones.

These bleedover effects can be reduced with different coax, antenna and fine tuning of your system etc....but in general your chances of pissing off your neighbors go up considerately with the use of a linear. Hope this helps.

I don't se what the big problem is. It's a radio with a few extras added to it externally. Where's the problem? It does the same 10-watts any export or so called 10-meter radio does... It has a few more bands... Big deal... I don't transmit in the ham bands...

What type of equipment do you own and run???? Are you any "better" then I am?

For some reason, my ham fellows around the world say that my "Spanish" is the notorious South American variation. Maybe it's the trips to EA8 that have caused this side effect, hi. The "lisp" sounds very funny to my old ears, I guess.

73, Kari

1345. A-99 Safety (was: LSB 38)

>through some RG58 coax.....

The A-99 is an awesome antenna! With long runs of coax, RG-8 is the minimum you should use, and there are better (and more expensive) types which one should consider. Not only will this give a better signal, but you will HEAR more signals, too.

Make certain there is a HEAVY ground wire hooked to the A-99. It picks up a lot of static electricity every time a cloud passes overhead. This is not to be confused with a radial kit. You need a direct connection to ground via #6 or larger stranded cable with no sharp bends. (If you have to turn a corner, turn wide.)

Yes, there is something wrong. Where on the vehicle is the antenna mounted now? I presume to the rear bumper. Your talking about a single whip, not a dual, right? Is the surface it is attached to steel, and is there continuity between that point and the rest of the body? If the coax is not molded into the base, and again I presume it is not. check to see the manner in which you attached it to the base of the antenna. Check to see that you have continuity between the coax shield and ground. Check to see that you have continuity through the coax--that it isn't broken inside somewhere. Use another meter to check with or use your meter on another setup that is known to be good. The meter might be bad, since you have no basis to assume otherwise. Finally get your hands oin an antenna analyzer to see where the point of resonance is on the antenna.

Cobra 148DX+ is a CB? Since when? Imagine that, a 10 meter HAM rig on a 10 meter HAM frequency. What is this world coming to when 10 meter rigs get used on 10 meters? You can't tell a CB from a 10 meter radio and you have the gall to call him a dumbass. If you are going to call other people dumbasses, at least get your own facts straight first.

What a dumbass!

Already have everything I pretty much want, with the exception of maybe a few more antennas. Since we are on a fantasy set-up, I would like to resonate and tune the ENTIRE electric fence, almost two miles worth, in a triangular pattern to be radiating in an adjustable, but directional manner. Frequencies are already wide open when one is a freebander. The FCC rules are irrelevant pertaining to whether they are up to date. They aren't, which is why the FCC dumped responsibility to the locals...and they ain't having none of it. How long has it been since 2346 was enacted? Last November? How many locales acted on it? Let me rephrase that, how many locales even know it exists. That's right. Stay off the hammie bands, and there has never been a better time than now to get active all up and down the bands or to run some heat to get that exotic DX. With strong signals coming in daily from some serious powered stations all over the word, you ain't gonna hurt a damn thing with a few hunnert (sic) watts, except some sensitive (read: effeminate) shack dwellers feelings amongst us.

Disconnect both ends of the coax and test it. If you bought it at
Radio Shaft, if it has crimp conntectors, or if it is a foam-type
coax, replace it. Disassemble the antenna mount, then reassemble
carefully, making sure the washers seat properly in the hole. Test it
to make sure. Make sure you have an adequate ground plane, i.e, plenty
of metal connected to the shield under the antenna. Make sure the
antenna mast isn't mounted closer than a foot or two from any large
metal objects. If you have another antenna mounted nearby, remove it.

Put it all back together and it should work.

Sparky, FLRC

I would like to see two freebands: one for FM with a maximum of 10
watts, and another for AM/SSB/RTTY with a max power of 100 watts. I
think they should be licensed with minimal or no testing, and
callsigns should be required.

Just my opinion.

Mad Dog:

From your other post you were looking for a way to learn code
on the go, may I suggest the Gorden West Audio Tapes which can
get from W5YI 800-669-9594 which will keep you company on your
long trips.

My late father (best damn trucker in the world, OK I'm biased,
but what kid ain't) tauaght us kids code while driving down the
highway, learned just enuff to be dangerous as well as how to drive
a truck. Dad had a 75 meter rig in the truck since he worked the
TN-KY run for A&P Food stores and several other truckers were
hams as well (WW II turned out Morse Boys by the Millions). He

experimented with a trailer mounted long wire and various whips
before he and the gang hit upon a front bumper mounted joy stick
which "replaced" the bumper indicator on his international longnose
truck.

He had CBs before the gas crunch and a set up at the house for mom
to call him around town (Memphis, TN) with which 5 watts (OK, Radio GODS
that how they were rated back then) and a sixty foot antenna
(RANGER TRIC STICK, still in my possession) she could reach him upto
40 miles out. No QRM or Loudmouths back then, most ops were very civil
and would relay if they thought it would help. A 23 Channel Cobra
tube job and blackface johnson in the truck. Boys those were the days.

Well Mad Dog, take care, and wish you all the best numbers, time to
get off my soap box and get back to work.

#1 me and trip keyed for shits and giggles....he did key on me locally...but never got his name called once in skip did he? any way you can say all you want..i keyed 6000 talked 4400...trip was keying 5000 talking 3900....i had my variable boost at 1200position which means i had about 4000 watts more to go but anyway im not one to key in competions...if you truly know who i am....i talk skip all day every day and like i said 222 is a real good friend of mine and we keyed for shits and giggles....can you explain why he was beating me to a a target 3 miles down the road? and then on the bowl didnt get his name called once while i was on the key looking at each other...? {same spot same location} i d like the explanation...but anyway
bottom line if i really wanted to pump up 8500 it would have been all over ,but hey if you give me $225 each amperex tube ill key all day and then it will be a different story..so its safe to say i cruised that 3 tuber at 4400 grand....the key word here is|"cruised".....413 have a good day

1375. SSB Radio's to trade

Newsgroup: rec.radio.cb
Date: 2001-03-19 19:16:59 UTC
From: "S.J" <s1j3@hotmail.com>
Message-ID: <995lutekd1@uranium.btinternet.com>
Source record: 75850

Hi
I have three SSB radio's that I no longer use, (TVI problems) They are a

1-President Lincoln, 26.000 to 30.000MHz, AM/FM/USB/LSB/CW, immaculate condition, boxed with all acssesories that came with it when it was new 4 months ago. If you go to this URL the radio I have is here, it is the EXPORT model.
http://www.cbshop.com/president_lincoln.htm

2-President George, as above except 26.065 to 28.755MHz this can be seen at
http://www.cbshop.com/president_george.htm
it is also boxed with accessories as new 9 months ago

3-Ranger TR296F-DX--26.000 to 30.000MHz. (modified).AM/FM/USB/LSB/CW excellent condition unmarked.See this one at
http://www.exportradios.com/radios/cb/texasranger/
it is about 7 months old
The three radio's are in immaculate unmarked condition and are working perfectly.

I am looking for a good base SCANNER, will trade either one, two, or all three for a good base unit. For all three it must be a top range base model
Will ship world-wide, (Air-Mail) I am in the UK.
Please e-mail if interested.
regards
S.J

Douglas,

The radio is an Export 10 meter Ham radio. The radio was designed to go to that frequency already. I don't think the FCC will do anything about it.

You've got some good answers to check into. I would also suggest taking a crack at morse. Since all the licenses are only 5 WPM now, you might as well load up if you can. It costs no more to take several tests than it does for one. I have taken this advice myself. Years ago, I drove to the FCC in Buffalo to get a ticket to get into broadcasting. I didn't study, rather I took all the tests. All I needed was a broadcast endorsed 3rd class radiotelephone license. I ended up failing element 4, but passed a radar endorsed 2nd class FCC license. I also learned that I had to memorize the TV channel split points (I knew the relationship between band ends, audio and video carriers) and the color burst frequency beyond 3 significant figures. I got the 1st class ticket the next time around. I also didn't study but went in for my amateur license in 1993. I took all the tests. And passed (yes, I used to hold a commercial telegraph ticket!). Total cost for the amateur tests was a bit under $6.00 at the time.

Hello,

I have a Radio Shack TRC-485.
I'm living in the Netherlands (Europe) and we use the FM modulation.
My CB (Radio Shack TRC-485) can only send and receive in AM /USB and LSB modulation.
Does anybody know how to modify my Radio Shack TRC-485 to a FM modulation ?
If you know, please help me !
You can send a reply to this message or email me to trappie@multiweb.nl

Tnx

GRTz Trappie

413, You may have about 4000 watts more of deadkey but your talk power is nothing even remotely close to 8500 watts. Ghostriders 3000's are lucky to talk about 8500. Big Deadkey wattage means nothing unless you go around dropping a hanger on people. As far as you wanting an explination what type of antenna system were each of you running. Ill also admit 3 miles away is not a good indicator.

Mad Dog, The code is rough unless you can spend the time doing it , If you are on the road play a morse code tape, subliminal listening will help even though you cannot copy the code while you drive. There is a tape out there called Rhythm of the Code which is really good. Personally I didn't mean to demean you or your Class of Ham license but you made it sound like you were a lifer..Hang in there when you get the time you will study the code...

Source record: 75871

The Novice was certainly intended that way. It became a bit unpopular with the advent of the Plus. The two kind of flowed together because the code speed was the same and both exams were fairly trivial. The Novice is no longer available but will probably be being renewed forever or the FCC data people kill it. I was also trying to keep it in real time without delivering a history lesson.

The key to all of this is Mr. Morse's code. It will be phased out sometime in this decade maybe but in terms of existential 'facts on the ground' it is still part of the drill. Sane human beings handle this in stride and move on. Some others get their knickers in a major twist and indulge in fantasyland attempting to obfuscate their unwillingness or whatever to walk the walk.

In the days of 5 wpm there is just no sane reason not to just get it done.

When testing for morse after the code portion a 10 question test is
given on what was sent. Some tests sites use multiple choice,some use
fill in the blanks. Starting in July there will be no more multiple
choice, it's all fill in the blanks. This is for the CODE only.

Because if you run it that way it is wrong, you swing the Bird Meter
backwards which equals negative modulation

I know who you got the box from and If you swing backwards on bird you run the box incorrectly. I can show you big numbers with your amp, It is called feed thru power. Do you know what that is ?

Hey, it don't take much to make the contact! I run an
Elecraft K2 for all my HAM stuff on HF. My antenna
is a dipole that was made from a piece of 18ga speaker
wire cut for 40M (about 7Mhz) then peeled into two
pieces. I feed it with 300 ohm twinlead from RS. It's
hardly noticeable. I use that antenna on 80M up through
10M (28.7Mhz or so) with the K2's built in antenna
tuner.

You'd be surprised how well some 'hidden' antennas
can work.

I work all OVER the place with the K2, which has a
MAXIMUM power out of about 12w. And in 99%
of what I do, I dial it to 5W out, just because I LIKE
saying I'm QRP and meaning it.

Mike

I hope you didn't pay too much for it. If the protection diode was
blown open then the power cord wasn't fused properly. That means
almost anything could be wrong with it, and as soon as you fix one
thing you will find something else wrong. Even if you get it working,
it won't work for very long because electrolytic caps and many
semiconductors are weakened, if not destroyed, by reverse power. For
all practical purposes, it is scrap.

I hate to say that something can't be done, but this comes pretty
close. You could modulate the VCO with a varactor, but you would need
to modify the lock, add a limiter, and rebuild the entire RF section
right through the final. And that's just for the transmitter - the
receiver is ten times worse (discriminator, limiter, etc). Sorry. But
it's a nice radio anyway.

I will not tell you it can not be done. I will tell you it is difficult. It is not so much a modification as it is a renovation or addition.

At some point in your transmitter, AM is generated and then filtered to produce SSB. FM is an entirely different process applied at a different point in the unit. The most common way to do it these days is to apply audio to the 'error' voltage circuit in the Phase locked loop and cause the transmit frequency to be shifted by audio. Because it is 'true FM' the audio requires treatment called pre-emphasis to sound right. Older methods included a 'reactance modulator' which essentially detuned a circuit at an audio rate. These were called 'phase modulation'. In your case, both would require an external unit to do it right and it would have to be engineered specifically for the unit.

You have also noticed that FM does not receive well on your unit. I would suspect you have to use the clarifier to make the AM detector do what is called 'slope detection' on the side of the FM signal. This will cause some loss of signal. To do it right will require a detector that both capable of FM but which is also not affected by signal strength to take full advantage of the 'quieting' effect of FM. This too is an outboard unit but one which may be available.

In short, there really is no simple modification. The unit was designed for AM and SSB on both transmit and receive. FM is an add-on and not an easy one. Perhaps the easy solution is to start saving up the guilders and Euros now.

Sorry.

Dick

: my DX in an area like this, without using a linear amp or a pre-amp?

Why should the cellular phone operator make it difficult? Cellular
frequencies are a long way away from CB frequencies. If you are worried
about interfering, just install a good low pass filter in your coax.

: a 10 meter HAM FREQUENCY.

: Way to go, DUMBASS. Complaint sent to the FCC with reccomendation that YOU be
: made an example of.

And, just what is illegal about that? It the rig transmitting? If not, it
is not illegal to modify a Cobra CB radio to have Ham Band capabilities. You
can listen legally all you want. But the radio is no longer legal for use
on the CB band.

I have modified quite a few CB radios to operate on the CAP frequency. The
modifications were legal - as there is no commercial CAP gear. We have to
modify existing equipment.

It could be done, but it would require almost a complete redesign of the
rig. The transmit mod is relatively simple - but modifying the receiver
would be a real chore.

My advice would be to do one of the following:

1) use it as it was designed to be used
2) sell it to someone who will use it and buy yourself a new CB radio
with FM that covers the frequencies used in your country
3) get a Ham license and modify it for 10 meter use

Don't we all mine our own business? After all, in the twenty first century, mining is not limited to raw natural resources from the earth. It could just as easily reference one's ability to grow a business, as in mining for customers.

I have a Kraco 23 channel CB does anyone have the mods that will let me run lots of power and go from 22 to 32 mhz (I'll just LISTEN ha ha) and be really loud? Is this a simple clip of resisters or do I need to buy a kicker or swing kit? Please someone help.

There's nuthin illegal about this damn stuff. SO WHAT if the guy is a CBer and says he operates it on CB. There's nothing illegal about modding stuff to work on ham bands and only using it on 3950 or 14310 and joining in the fun or even bootlegging on 10 meters (it's practically part of CB anyway) so STFU and go back to policing the ham bands and leave us freedom loving revolutionary heroes to use the radio rights that god gave us.

CB radios can NOT be modified so that it RX or TX anything other than the 40 CB "channels". Listening to a 10 meter ham frequency on a CB is therefore illegal, since a CB should not be able to RX on the 10 ham band.

A ham radio can be modified to RX on ANY frequency (except for cell phone freqs of course), and they can be modified to TX on any other ham band and on CAPS/MARS if an appropriate license exists by the operator.

Awrite, Sparky, good thoughts: with that you'd be able to work legally on
the allocated ssb freqs, maybe there would be no need to do any
"freebanding"?
Also, small beams might make the hobby more interesting: less output power
would be needed, hence less QRM.

Not likely, since there will always be morons who, giving up on the
hope that they will ever get laid, think that 'power' is the
end-all-beat-all of human existance. The real problem is getting those
same morons to actually understand and control the power they are
messing with. Laws don't work -- they need the feedback of the
community. So if the FCC should ever let us get serious about our
radios, maybe we can get serious about those that abuse them. But then
again, if the ham community is any indication ...

Despite all that, I really think that two freebands could and should
be allotted: one for local use and one for DX. The maximum power
should be the minimum needed for intended use. If someone wants to use
more power, he/she can upgrade their license. Give the truckers their
own band nearby (it's not like they need all 40 channels). Allow a
couple freqs for low-power broadcasting of road and weather
conditions. Licensing can include a provision where abuse (nuisances)
can be handled by private prosecution (case law will eventually
establish limitations).

>Also, small beams might make the hobby more interesting: less output power
>would be needed, hence less QRM.
>
> 73, Gary

I like the idea of "experimental" bands, like the 160-190kHz band. I'm
sure the FCC could find some more holes in the spectrum for the RF
geeks to play with. In fact, most non-commercial services could be
addressed within two or three small freebands.

Are you sure? Greased hinges are not good for an RF ground. You need to take some copper braid and attach the trunk lid to a more secure part of the car. DC and RF act completely different.

If the average CBer type could re-write the regulations what would we
see? hmmm...

Power restrictions expressed in "pills" rather than watts. A repeal of
those silly "spurious emissions" rules. Mandatory "roger-beeps" at the
end of every transmission. A new band-plan with 100 Khz wide AM
channels from 25.000 - 26-500, 26.500-27.000 would be for important
expiremental modes like echo-mics and noize toys. 27.000-27.500 for
CB operators that are wannabe hams - LSB, pretend callsigns, and
mis-used ham jargon are required. 27.500-28.000 would be reserved for
taxi cabs.

For far too long CBers have been ridiculed as a pack of illiterate
morons with no technical skills. It is time to put an end to this myth
forever. In addition to changing FCC rules, the goverment should start
investing in some of the innovations that have come out of the CB
community in order to improve radio services for our goverment
agencies. Perhaps government can recruit CB technicians from the
nation's truck stops to look into the radio communications at the
Armed Forces- I'll bet that we could improve our defense communcitions
by clipping limiters for super modulation and tuning antennas for low
swr by adjusting the coax length. And speaking of antennas- why are
our fighting-forces crippled with single whip antennas on tanks and
humvees while many civilian pickup trucks have sophisticated
mirror-mounted co-phased two-foot whips?

Wow, u never know what results u could get working on LF, in Finland hams
got the right to work on137 kHz and some have had a good time on the
kilometer band...

Arf arf, humor.
Actually, I was merely trying to see if CBers had any good ideas of
developing the hobby, even in theory. The FCC, CBers, hams and other radio
users sure have their own ideas about what we should be able to do with,

say, a CB rig. Some brainstorm type of thinking never hurt anyone, did it? Some of my Finnish CB friends are thrilled to have gotten themselves ssb rights after so many years of wishful thinking. Now, after all the dust has settled, they can't get any legal radios with ssb capabilities on the market. You never win...

Power restrictions expressed in "pills" rather than watts. A repeal of those silly "spurious emissions" rules. Mandatory "roger-beeps" at the end of every transmission. A new band-plan with 100 Khz wide AM channels from 25.000 - 26-500, 26.500-27.000 would be for important expiremental modes like echo-mics and noize toys. 27.000-27.500 for CB operators that are wannabe hams

Your slip is showing. I realize it is difficult for some of you to comprehend, and your feelings get hurt, but the majority of DXers on the 27 megs freeband have no interest in being even remotely associated with hammies. If you believe otherwise, you are only fooling yourself.

- LSB, pretend callsigns,

What is a "pretend" call sign? Alfa Tango requires 100 confirmed separate DX divisions for consideration. I'd say those calls are earned, NOT BOUGHT, like so many today.

and mis-used ham jargon are required.

Ah, so that's a part of what ails ya'! Who cares? HAmmie Jargon don't apply, 10-4 driver?

27.500-28.000 would be reserved for taxi cabs.
For far too long CBers have been ridiculed as a pack of illiterate morons with no technical skills. It is time to put an end to this myth forever. In addition to changing FCC rules, the goverment should start investing in some of the innovations that have come out of the CB community in order to improve radio services for our goverment agencies.

Man, you certainly are desperate aren't you? Maybe a letter to your Congressman and some long overdue therapy will assist you with your personal issues and manufactured dilemmas.

Perhaps government can recruit CB technicians from the nation's truck stops to look into the radio communications at the Armed Forces- I'll bet that we could improve our defense communcitions

Er, scratch that letter to your Congressman. He won't realize you are of legal voting age. Maybe you should call him instead of writing him as a means of communcitions (sic), er, communications.

by clipping limiters for super modulation and tuning antennas for low swr by adjusting the coax length. And speaking of antennas- why are our fighting-forces crippled with single whip antennas on tanks and humvees while many civilian pickup trucks have sophisticated mirror-mounted co-phased two-foot whips?

Good question. Probably the same answer as to why the officers get to sit their duffs on 1500 dollar toilet seats that carry as many germs and are as cold as the ones Kmart carries that the rest of the country uses, and why the soldier working on the General's personal auto has a Craftsman wrench without the name stamped on it that cost 750 bucks..

THANKS FOR THE REPLY SPARKY
THIS IS WHAT I FOUND.
MODULATION TRANSISTOR BAD
MODULATION DRIVER BAD
OUTPUTS BAD [2]
OUTPUT DRIVER BAD
2 BAD DIODES
REPLACED ALL AND IT WORKS GREAT, COULD HAVE SWORN THAT I CHECKED THE OUTPUTS PREVIOUSLY, THIS IS THE FIRST RADIO I HAVE REPAIRED AND ALSO THE FIRST I HAVE TRIED TO REPAIR. THEY ARE PRETTY EASY TO WORK ON.
I HAVE A TV AND COMPUTER SHOP AND HAVE REPAIRED TV,VCR,CAMCORDER AND COMPUTERS FOR 18 YEARS AND THESE HAVE TO BE THE EASIEST REPAIRS I HAVE EVER DONE. AGAIN, THANKS FOR THE REPLY

> sorry leland. 27.700 was not a UK freq then and isnt one now.

This should refresh your memory for the second time Tim.

http://www.geocities.com/rf-man/spectrum.html#b27

Scan down until you find the listing for "27.601..CB, to 27.99125 (27/81) UK ONLY - 40 FM 10 khz channels". Using the conveniently supplied formula the UK channel 11 is calculated as

(11 * 0.01) + 27.59125 = 27.70125 MHz.

Oh, one more thing, pay attention to the comments about "foreign" SSB signals on their FM channels too. I guess they don't like them. SSB and FM don't mix well.

Operating on 27.700 MHz puts you also exactly on the center frequency for the UK CB FM channel 11. Since you have never done any FM work, being 1 KHz off channel center would not be noticeable, i.e would do as good a job of wrecking a QSO in progress on that channel. The filters used for FM work are likely at least 7 to 8 KHz wide for 2.5 KHz deviation, and 15 Khz or more wide for 5 KHz deviation.

I hope you are getting a 2950 (old style), i dont care for the new DX'r.
Like any good 10-12meter rig they need to be aligned yearly if used mobile.
If you enjoy SSB you should get something else, but the AM is unbeatable.
2950's are famous for a very powerful receiver, then again front-end
overload
can be a asset when used correctly.

Hook up the radio to a Astron 20amp power-supply, with the radio turned on
depress the PTT
button and simultaneously clip both the Red & Blk. wires that come out the
back of the radio, this will give you the coverage you need..... /:-}

Message-ID: <998c6v$6cg7$1@ID-20128.news.dfncis.de>
Source record: 76052

A reading of 5:1 indicates a dead-short between the center conductor and the
ground braid.
Check the coax and inspect the mount, goto http://www.firestik.com, they
have a Tech-help
section that should help you diagnose the problem.

Umm ... 40 to 60 miles on six triple a alkaline batteries in a handheld.
Usually run 1.5 watts, sometimes 3.
That is 24/7 coverage.

Dick NØBK

Ha! I know of some fine amateurs that DX on the freeband. (Was that sentence worded correctly to fashion a passable hook, due to what some are certain to call an oxymoron?) :) Matter of fact, if you didn't know them personally, you wouldn't even know they were hams..they been there and done that. I am sure they will become active after this round of DX dies again, but for now they reside in the zone.

The best deal is when both parties feel they received the better deal. I can think of a perfect example. A friend who wasn't into radio, had a 40 channel Navaho laying around in a box forever. Seems his brother bought it many years ago and went into the service and shelved it. He was cleaning out his house, plugged it in and it didn't work, so he was going to toss it. Got it for next to nothing, he put a bit of jingle in his pocket, all it needed was a voltage regulator. This thing is cherry, was still sitting in the styrofoam inside the box, and get this, we both were happy with our deal.

Not to many. The statement was "no interest in being even remotely associated with". While this is very true and vise versa true as well, it is unfortunate because the dislike stems from the same ignorance as racism and any other kind of bigotry. Like Rodney King said, " Cant we all just get along"?

I think there is a difference between "no interest" and "dislike".
Seperatism <> hatred. Just because men and women have seperate public
restrooms doesn't mean that men and women must hate each other. It
just means that there are differences between the two, and that those
differences are significant enough to warrant seperation.

If a ham doesn't want to be called a freebander, and vice-versa, that
doesn't make either of them a bigot.

Sparky, FLRC

It would, of course, depend on what the individual person wants to do.
I have NO problem as defining CB, "CITIZEN'S BAND", as whatever part
of the radio spectrum a person wants to use, and one would hope that
this person would be sure to NOT purposefully interfere with others
use of the radio spectrum: rights have responsibilities.

As to equipment: I like the Icom IC-746 coupled to an Ameritron
AL-811H amplifier being fed into and Ameritron ATR-15 tuner, a low
pass filter (HF bands) and then on along to assorted antennas via
Belden 9913 coax.
Not the most powerful station around but it does what I want it to do
and that's all I ask of any equipment.

My dream setup would be a bunch of "free" bands that would be exclusively ours starting below 3 Mhz for statewide DX and going up into microwave for experimental stuff. All modes LSB,USB,AM,FM,FSK,PK32 etc. would be able to be used, and there would be sub bands for each. (For guys that wanna use CW we would even save a little part of the beginning of each "freeband"). Power would be unlimited up to somewhere around 1500 or 2000 PEP. Everybody would get callsigns that nobody could steal, so maybe they'd be issued by the feds or by some national organization. There'd be a simple test anyone could pass, sort of like a drivers license test for radio. Every "freebander" would give his word to operate responsibly and obey the rules.

Uh oh!

Damn.....wait a minute! I just described...

....HAM RADIO!!!!!!!

73 and Good DX,
Tim

Exactly. There's no law against "listening" to frequencies above the legal 40. They have to "prove" you're transmitting and they'll never catch you, just like when I'm smoking crack, there's no chance I'll get busted unless they actually SEE me doin it. HAHAHAHAHA.

Hi all,

I know very little about radios and frequencies, etc.
(other than the airbands I use as a pilot)

I would like to be able to communicate with my home whenever
I find my self over-flying. I have an airband xcvr that I'd like
to use to talk to some kind of base station. I'm looking for
something old and cheap. Can anyone recommend a radio
rcvr/xcvr that I could place at home and leave on whenever
I'm out flying so I could call up home?

Thanks.

Can't disagree and I are one. From a perfectly selfish POV they do make
some damned good Amateurs though. When was the last time you saw one
return to haunt you?
Dick N&#65533;BK

Ha! I know of some fine amateurs that DX on the freeband. (Was that
sentence worded correctly to fashion a passable hook, due to what some
are certain to call an oxymoron?) :) Matter of fact, if you didn't know
them personally, you wouldn't even know they were hams..they been there
and done that. I am sure they will become active after this round of DX
dies again, but for now they reside in the zone.

****
Well, they are not all telling you about being illegal :-)

Just 'cause I don't understand it doesn't make it any less real

Dick

They're coming to take me away, ha ha was done in his living room by a guy calling himself Napoleon XVII if I remember right. In those days you didn't need $50 million Quincy Jones production numbers to prove you can't sing a lick (listening Janet?) just a decent tape machine and a label dumb enough to issue it.

Anyone remember Leader of the Laundromat?? My daddy's shorts were everywhere.

You guys are really dumbasses. Here's your proof, a quote from Part 95, Subpart D of the FCC rules (AKA The rules that CBers have to follow):

RULE 9 - Equipment
{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance'label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.

You will notice that part B states that a mod can't be made to a CB. Plain and simple. No CB is manufactured for sale in the US that can monitor anything other than CB channels and some have the WX channels.

And for those of you that lack the ability to work a search engine, here's Rule 25, as refered to in the above rule:

RULE 25 - Modifications to Transmitters {A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.

Depends on how much you want to spend. If you are going to pay for a
groundplane kit for the A99, you might as well get the Imax 2000, which is a
much better antenna and will run you about the same as an A-99 with the GP
kit... check out http://www.copper.com. They have some good prices on antennas.

Source record: 76094

The A99 will serve you well, the ground plane kit will lower the angle of radiation and help bring the
Impedance closer to 50ohms.
The A99 is a tad short for 11meter work but "firestik" makes a replacement top-section
that cures that for ($20.oo).
The I-Max2000 is a 5/8wave design that has tuning rings like the A99 but it does'nt require
the GPK and it will out-perform the A99.
If ya want something that you dont have to tune then shell out the bucks for a "Shakespeare
ABS1600" ,all it needs is quality coax and a little fire in the wire....
To answer your question the A99 is the minimum u need, it is your basic end-fed 1/2wave
omni-directional vertical dipole.

:>can listen legally all you want. But the radio is no longer legal for use
:>on the CB band.
:>

: CB radios can NOT be modified so that it RX or TX anything other than the 40 CB
: "channels". Listening to a 10 meter ham frequency on a CB is therefore illegal,
: since a CB should not be able to RX on the 10 ham band.

Really? I think the FCC would be surprised by your claim. It is not in
their regulations. Note that I DID state that it would no longer be
type accepted for CB.

: You guys are really dumbasses. Here's your proof, a quote from Part 95, Subpart
: D of the FCC rules (AKA The rules that CBers have to follow):

: RULE 9 - Equipment
: {A} You must use an FCC type accepted CB transmitter at your CB station. You
: can identify an FCC type accepted transmitter by the 'type acceptance'label
: placed on it by the manufacturer. You may examine a list of type-accepted
: equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter
: which is not FCC type-accepted voids your authority to operate the station.
: {B} You must not make, or have made, any internal modifications to a
: type-accepted CB transmitter. (*read Rule 25) Any internal modification to a
: type-accepted CB transmitter cancels the type-acceptance, and use of such a
: transmitter voids your authority to operate the station.

I said nothing about using it for CB. I think YOU are the one that is the
"dumbass", as you apparently cannot comprehend the simple statements that
I did make.

... deleted ... for the same reason. It applies to CB usage only - not
to equipment modified for services other than CB.

>lots of power and go from 22 to 32 mhz

Mount the radio upside down. A gravity switch on the circuit board will close, eliminating the necessity of cliping wires or moving jumpers.

Only the Kraco 23 channel radio had this feature. It was banned by the FCC immediately after it was introduced and most of the inventory was destroyed. You have a rare survivor, which probably is worth up to $2.57.

We might be interested in doing a segment about this equipment when we are filming in your city later this year.

Best regards,

>

They work and sound great if you leave them stock.

I have some which have been in service for years. One has been transmitting CW at full power as a beacon. Never had a problem. Good signal reports.

Ranger gear needs an adequate power supply. And in a vehicle, a DC filter is a must!

Thats a cool stealth setup. Those lower frequencies really bounce for days! Your station is really adhering to the policy of good amature practice. Had no idea a length of wire could get out so well.

>Really? I think the FCC would be surprised by your claim. It is not in
>their regulations. Note that I DID state that it would no longer be
>type accepted for CB.

For those of you in the cheap seats, I'll post this again (Part 95 Subpart D of the FCC Rules):

{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.

You can not operate the station. Disconnect it from the power supply and throw it in your junk bin. You can not operate the radio. Turning on the radio is operating and don't try to say it isn't. When you turn on a shortwave receiver or scanner, are you not operating it? Give it up.

CB's can not legally be modified for any purpose. If you don't believe me, email Riley Hollingsworth. Oh, and while you're at it, give him your exact QTH and the times you operate in case he wants to stop by for a cup of tea.

Thanks for the replies, gentlemen,

Looks like my doubts were correct: some people believe that hi output power with fancy rigs is the key to working. Too bad - in my experience excessive use of output power only destroys the bands- there are so many examples of this on the twenty meter band, for instance.

I agree that a 75 meter type of domestic band could be useful for national communication, but what's the difference between a test-free CB station and a ham station, who has passed quite a few tests and done a bit of studying to get privileges on, say, 3 megs?

I was hoping to get more replies like those of Sparky, and maybe even a few nice proposals on how to develop the hobby. Thanks anyway - with the exception of the "gee seven" moron, whose comments are always so predictable.

Enjoy your radios, see ya later!

Not bad. Tim maybe better off shopping around at some of the local
electronic flea markets for his dream CB. Finding one for a few bucks, even
in a non-functional state, would be good for him. That way he will find out
just how much, or little, he knows about electronics, and gives him a chance
to improve his trouble shooting skills. May Hams do the same thing. They
have just as much fun restoring the old boat anchors as they do operating
them. All part of the hobby.

I don't do Flu shots, Spark. They definitely recommend them for the seniors (funny, I had you pegged just a tad bit younger :)) but the bottom line is, inserting a dead hybrid virus into your body only protects against a certain strain. Murphy's law applies aptly here. Get the shot for the season's predicted Albanian flu, and damned if one from Uganda isn't gonna turn around and bite you in your ass.

This falls under one of those "legaleeze" areas. If you take the rule,
it basically says that any internal modifications voids type acceptance.
So if you carry that over to station's rules it basically says that only
type accepted transmitters are allowed on CB. So voiding type
acceptance is akin to saying the radio can no longer legally be used as
a part 95 CB radio.

Now, of course, you can modify a CB to do anything you want on the
receive side. But you can no longer legally use its transmitter on 27
Mhz. So if you want to butcher up a CB to "monitor" 10 meters, and sit
it on the shelf beside your unmodified CB that you use to transmit, that
would be perfectly fine. They just can't be the same radio.

For those of you in the cheap seats,

Translaion: Anyone who doesn't read it the way I read it.

I'll post this again

Post away. You won't be the firstand won't be the last. Seems the folks referring to the rules over and over are the ones who know the least about them.

(Part 95 Subpart D of the FCC Rules):
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB

There is your first problem. You said CB. Why can you not get past this fact? Sold as ten meter radios, they are NOT type aceepted. What part do you not understand? Save your semantics.

transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.
You can not operate the station.

Correct. I don't have a ticket.

Disconnect it from the power supply and throw it in your junk bin.

Why?

You can not operate the radio.

You have already stated that. Why stutter now?

Turning on the radio is operating and don't try to say it isn't. When you turn on a shortwave receiver or scanner, are you not operating it? Give it up.
CB's can not legally be modified for any purpose.

Repeat stutter.

If you don't believe me, email Riley Hollingsworth

Have. Many times. When info is needed, go straight to the source.

Oh, and while you're at it, give him your exact QTH

He already has it.

and the times you operate in case he wants to stop by for a cup of tea.

He could care less, as I am not a ham and don't screw with the hams or my neighbors. But you are correct in one aspect, he probably drinks tea. I'm more curious in how you so quickly identified with his beverage of choice.

Up to 10,000 miles on SSB (Toronto Canada to Sydney Australia). But usually 3,500 miles is more the norm (Canada to Europe).

That's using a Ranger 2970 and a K-40 antenna on the trunk, no extra linear.

Richard.

You have no idea what you're talking about. A CB radio CAN legally be modified
to operate on the 10-meter ham band. Amateurs have been doing this for years,
since SSB CBs can be easilly modified into inexpensive mobile rigs for
10-meters. In case you forgot, FCC type acceptance is NOT required for
10-meter ham gear.

Of course, once altered, such a radio would no longer meet type acceptance for
CB use and would NOT be legal as a CB radio.

Read my other posts, quoting from Part 95, Subsection D. A CB can not be modified in any way shape or form. Period. If it is, it can no longer be operated, which means you can so much as turn it on. The rules clearly state this. A ham can NOT legally modify a CB to transmit on 10 meters.

>Now, of course, you can modify a CB to do anything you want on the
>receive side.

Read my other posts quoting from Part 95, Subsection D of the FCC rules. It is clearly stated in there that a CB can not be modified for ANY purpose. You can't so much as turn a little pod in there to adjust the audio or the power output, unless it's part of a repair. Modifying a CB to "RX" on 10 meters is not legal, not even for a ham.

Check out http://www.reactintl.org/rules-cb.htm for the complete Part 95, Subsection D rules.

newsman,
___Probably one of the 'cheapest' ways of doing that would be to
find a used radio somewhere. Then, you'd only need a 12 volt power
supply and an antenna. It's been lots of years since I've done
any flying, and I'm not sure if I ever knew to start with, but I
think I'd check into licensing your radio at home (if you can).
I'm almost positive that a unicom/intercom radio has to be licensed.
'Doc

Admirable! Try Element 3; it will be like reading a giant Drivers License manual. While you are about it download Morse Academy from http://ah0a.org set it for 16 wpm characters spaced 6 after reading how to install it in Windows (it is a DOS program). In a month or so you can take the General.

Not of any giant value on 2 meters except that it allows you to stay the hell out of the kiddie games. You can pontificate about all the seabag lawyering from people who have never taken an exam on Part 97. You can look for the little G on the address label on the junkmail you will get. All in all a rewarding experience.

Yes, I Guess I am A BAD American. I like big cars, big boats, big houses and big dogs.
I believe the money I make belongs to me and my family, not some mid-level
governmental functionary with a bad comb-over who wants to give it away to
crack addicts squirting out babies.
I don't care about appearing compassionate. I think playing with toy guns doesn't
make you a killer.
I believe it's called the Boy Scouts for a reason. I think I'm doing better than the homeless. I don't think being a minority makes you noble or victimized. I have the right not to be tolerant of others because they are different, weird or
piss me off. I am better off now than ever before.
I don't celebrate Kwanzaa or Hanukkah. But if you want to that's fine; just don't feel like everyone
else should have to.
I believe that if you are selling me a Dairy queen shake, pack of cigarettes, or hotel
room, you do it in English. As of matter of fact, if you are an American citizen you
should speak English. My father and grandfather shouldn't have to die in vain so you
can leave the countries you were born in to come disrespect ours.
I think the cops have every right to shoot your sorry ass if you're running from them
after they tell you to stop. If you can't understand the word freeze or stop in English,
see the previous line. I don't use the excuse "it's for the children" as a shield for
unpopular opinions or actions.
I know how to count votes and I feel much safer letting a machine with no political
affiliation recount when needed. They just need to invent one that is capable of counting ballots other than by the hundreds of thousands.
I know what the definition of lying is.
I don't think just because you were not born in this country, you qualify for any special
loan programs, government sponsored bank loans, etc., so you can you can open a hotel,
c-store, trinket shop, or any damn thing else.
I didn't take the initiative in inventing the Internet. I thought the Taco Bell dog was funny.

I want them to bring back safe and sane fireworks.
I believe no one ever died because of something Ozzy Osbourne, Ice-T or Marilyn
Manson sang, but that doesn't mean I want to listen to that crap from someone else's
car when I'm stopped at a red light. But I respect your right to.
My father did not go to some foreign country and risk his life in vain and defend our
constitution so that decades later you can tell us it's a living document ever-changing
and is open to interpretation.
I don't hate the rich.
I know wrestling is fake.
I've never owned or was a slave, and a large percentage or our forefathers weren't
wealthy enough to own one either.
I believe a right winger conservative or an extreme liberal with a cause is more dangerous than a Hell's Angel
with an attitude.
I want to know which church is it exactly where the "Rev." Jessie Jackson preaches;
and besides, what exactly is his job function? I own a gun, you can own a gun, and any
red blooded American should be allowed to own a gun, but if you use it in a crime then
you will serve the time.
A rubber band and a paper clip is a dangerous weapon in the hands of someone with
malicious intent. So is a baseball bat.
I think Bill Gates has every right to keep every penny he made and continue to make
more. If it pisses you off, invent the next operating system that's better and put your
name on the building.
I don't believe in hate crime legislation. Even suggesting it pisses me off.You're telling
me that someone who is a minority, gay, disabled, another nationality, or otherwise
different from the mainstream of this country has more value as a human being than I do
as a red-blooded heterosexual male. Hell, if someone kills anyone, I'd say that it's a hate crime.
I like the convenience of buying oranges from a sidewalk vendor or while I'm waiting at
a stop-light, and I'm pretty sure the Latin midget selling them to me is glad she no longer
lives in a refrigerator box in East Dallas or is sleeping in the streets of her home country.
We don't need more laws! Let's enforce the ones we already have. I think turkey bacon,

turkey beef, turkey fake anything sucks.
I believe that it doesn't take a village to raise a child, it takes a parent with the brains to
stand up to the kid, kick his ass and say "NO".
I think tattoos and piercings are fine if you want them, but please don't pretend they are a
political statement.
I believe you don't have to speak with a lisp to pick out a couch for your living room.
I'll admit that the only movie that ever made me cry was Ole Yeller. I didn't realize Dr. Seuss was a genius until I had a kid.
I will not be frowned upon or be looked down upon or be made to keep silent because I
have these beliefs and opinions.
I thought this country allowed me that right.
I will not conform or compromise just to keep from hurting somebody's feelings.
I'm neither angry nor disenfranchised, no matter how desperately the mainstream media nor those who have nothing better to do than attempt to assail me would
like the world to believe otherwise. People will be people. I cut my own path and if you don't like it, it's your problem.

1579. Hams vs. CBers!

Newsgroup: rec.radio.cb
Date: 2001-03-21 22:30:48 UTC
From: BC <basketcase_910@hotmail.com>
Message-ID: <tbias9i21qkk89@corp.supernews.com>
Source record: 76004

Ok I am a CB'er and have been for years now, a little interested in getting a license but not important enough to me to do it right now. with that aside, I would like to address what seems to be a constant argument on this NG. You "freebanders" (as you seem to call your selves) are CRAZY if you think that
1: You will EVER get 10, 12, 2, etc meters from the hams
2: That the FCC will never catch you, especially if you use above 28 mhz
3: You NEED all those extra channels

Hams you are crazy if you think that
1: You'll ever get rid of the people you can't stand so much
2: absolutely none should be in between bands (eg. 27.555 etc)
3: That calling anybody a keyclown, faggot, gay, or whatever the hell other names have been thrown around here makes me or many other people want to be a ham like you, you should be setting an example!

Now with that aside I would like to explain a few things and why I believe them, also if most people stuck to this way of thinking I think there would be a lot less crap on this NG and the air waves.
Like I said before I am a CB'er! in fact the kind hams tend to hate I am an agitator, I don't hide behind the mic and only act like a dick when I am on the radio I am just an annoying person, PERIOD. But I will admit that on the radio its more fun than anything. Another thing, I don't have a problem at all with using frequencies that are in between bands (or in between channels for that matter) They gotta be used for something! I don't have a problem with any mod that either you or I do on a radio as long as it has been done well, this means no bleeding (onto anything else at all), that's about it anything else is ok even if you sound like crap it doesn't matter to me I just chuckle and move on (but I might tell ya first),, besides I know I sound good that's all that really matters. Now as far as amps go, I don't have a problem with running power (even though I dont, don't need to) as along as it (again) doesn't bleed and I can hear you on all 40 when your on 19. Hell I don't care if you were running 50,000 watts, I'd probably be jealous. But the point is that both sides need to respect each other here. All the hams want is for us to stay the hell off there frequencies and all you should want is to be able to be on the air at all, consider yourself LUCKY that we even have a free band! RESPECT MAN I'M TELLING YOU, RESPECT!
I'm sorry I have gone on for so long about this and probably repeated my self a few times but this whole fude between you guys is retarded to say the least get on to the help and the questions and the camaraderie that should exist on this NG but doesn't (just like CB :])
One more thing I would like to say thank you to all the people that have helped recently (who I believe to be mostly hams), I appreciate it, you've been a great help
(that's what this group should be all about)

Hi,

Are there any mods to improve the receive for my RCI (Mirage) 2950 ?
I think the ears could be improved.

Thanks,
Chris

Really?????
That's strange, I'm looking at a February 1967 QST magazine that has specific mods to convert CB radios of that time to 10 meter operation...

Nigel.

I got the album! It's the best of Herman's Hermits. It was a hand-me-down
that ended in my pile of records. And I've got a WORKING record player!

Nah, I'd have to drag out the amp and the speakers...too much like work.

1584. I just want a simple home/base CB...

Newsgroup: rec.radio.cb
Date: 2001-03-21 23:06:17 UTC
From: Brianne <briannes@nexx.net>
Message-ID: <01c0b26c$54883a80$0132a8c0@mom>
Source record: 76010

I am not a hobbyist (yet) nor into the technicals.
I would just like to have a CB radio at home to talk to my husband while he's in his truck as he drives around town.
(We live in a small town - about 4 or 5 miles is farthest away; but usual distance would be about 2 miles, maybe 3).
All I know about his radio is that it is a 20 year old CB.(We've never used it, it came with the truck; it seems to work...).
I was wondering if someone could point me to an inexpensine ($150.00ish) CB radio that I could use at home.
Also, would a base be better than a hand held? Do hand helds plug into a wall socket? And will I also need an antenna? (We have a scanner antenna, from Radio Shack, it looks like a cone with some sprouts at the top).
Thanks for your advice,
--
Brianne

You are wrong you can modify the radio once it is done however, it then does not meet type acceptance, and you need a radio that is type accepted radio for cb band, you don't need a type accepted radio ham use.
You are incorrect VHF but then again what would you know about a HF Rig.

If it's the big long chrome colored antenna, it's not worth it. They are only fancy 1/4 wave antennas. They have a lot of wind resistance so you need a strong mount into solid metal for grounding. If you are going to do that kind of mounting, I would recommend the longest Firestik you dare put on it. I talk long distances using a KW-7. Shorter whips give increasingly worse results. I never use my 3 footer, it's useless. Xmit sucks as bad as receive. Glad it was free!

Go visit your local pawn shop and pick up just about any old radio
with 40 channels. If it doesn't have an AC cord, you will also need a
12V power supply. I would also recommend an external speaker, because
the sound quality from the speakers inside the radios can give you a
headache.

>Also, would a base be better than a hand held? Do hand helds plug into a
>wall socket?

Don't even mess with a handheld. You will be terribly disappointed.

> And will I also need an antenna? (We have a scanner antenna,
>from Radio Shack, it looks like a cone with some sprouts at the top).

A discone antenna for scanners will not work. A decent and simple CB
base antenna should cost you no more than $75. Since almost all CB
radios transmit with the same power (4 watts), your antenna is where
the bulk of your money should be spent.

Pay special attention to lightning protection -- disconnect the
antenna when it's not being used.

Naw, TW,

Mighta been just a couple years after. The guy is crazy(?) and is worried that the fellas in the white coats are coming after him. So the lyrics are as previously quoted and get shriller as the song goes along. I don't remember all of it, but, if you recall, it had a kind of march tempo. It just sorta fit what with all the talk about white vans 'n stuff. The Henry the VIII thing had another tune:

Oi'm 'enry the VIII Oi 'yam.
"enry the VIII Oi 'yam, Oi 'yam.
Oi got married to th' widow next doah,
She's been married seven times before.
And Ev'ry one was an 'enry, she wouldn't
'ave uh Willie or uh Sam.
So oi'm 'er 8th old man, now, oi'm uh 'enry.
'enry th' VIII oi 'yam, oi 'yam,
"enry th' VIII oi 'yam.
Whoop-de-Doop!

LOL!

TW,

Do you remember the one (probably not) about Brucie? Uh, I'll likely get harangued, but it was about a gay guy who left his "purse" in the beauty parlor when the hair driers caught fire! About 1969, I think. The oldies stations don't play that one anymore! LOL!

Sigh ... Twist, I don't usually disagree with you and I don't on most of the post. Just be careful and not judge too quickly. Heck, I see your good buddies (I won't mention N8***'s name nor voob***), but my thought on welfare is this (and I'd love a reply - we have no animosities) ... I'd like the govenment guarantee folks a job. Yep. If you can't find work, the government will give you work. Not a lot of money, but better than welfare generally pays. If you refuse work, you go to jail. Period. I heard years ago that Austrailia did this. I'm not being cruel - as I said, it should pay better than welfare. Folks shouldn't go hungry. Assuming, that is, that they are willing to work. You see, I am finding out things these days that are quite fascinating. We have a 'helper'. A low wage grade individual who runs the bench grinder. He has asked for more money but has been told 'all you do is run a bench grinder'. Ok. Sounds good on the surface. Fact is, he was loosing his job and took what he had to. He has applied for jobs as a fork lift operator and other jobs, but the problem is - he is over-qualified. Whaaat? Seems he was a top end tool maker and then went professional. The company loves it. They have a skill set (yes, he has been turning jobs others can't do) and won't pay for it! Nice. He has a kid in college and can't fight the system. He has developed an attitude, however. If someone wants to run 1000 RPM on a 1 inch cutter on stainless or tool steel, he will let them destroy the tool. I don't blame him one bit. Personally, I will have a really funny prank to pull on those folks 1 year and 2 months from now. I will be elegible for retirement. You know, 20 years ago they didn't have any engineers that could program something to develop PLC programs with a PC. They tried and failed. I did it and everyone tried to take the credit. Well, I simply wrapped the cables around my poor old Trash-80 color computer and went home. I find myself working for the same idiots. Fortunately, I discovered the 'back door' to the Allen-Bradley SLC-500s. Well, I will wait a year. Then show them what they have done wrong. I cut cycle time on the Modicon PLCs 5 years ago considerably. I don't need any more $75.00 dinner certificates. They will be impressed. Then they will discover what an OEM lock is. Tough titties, guys. Pay me up front or I sell it to someone else. It makes no difference to me. Heck, I'm willing to bury it. It costs me nothing, but is worth over half a million a year to these folks (yes, I know what it costs to produce the device). So ... all I am saying is don't jump to conclusions since you likely do not have all the facts. E-mail me if you want to flame, I have no problem with that, but, having had conversations with you in the past, doubt that we disagree very much on anything.

Hey Scott, I'm a huge fan of vinyl myself. I still have the Techniques turntable and same Pioneer speakers I have had since 1986, although I did add 2 Bose and 2 Jensens since then. Never did quite make it to the CD changeover yet. I prefer DAT. I mean, I have like, a dozen cd's or so, but no cd player. Gotta use the kids or listen in the truck or car. But the vinyl, ahh, the slick shrink wrap, the smell of a new album, glossy lyric sheets, double fold out albums just made for...I still have well over 300. But no Hermits.

1597. Re: Are you a bad American?

Ha! The thing was received as a forward, much as I would like to claim credit for it, however I did slightly modify it in one aspect. I added the "right winger" because all it said was "liberal" and one can be just as bad as the other. I'll send you the original, James.

Please understand that many of the things you write about are cause by a few (mostly two) individuals. No, not all hams 'hate' CBers. The most fun I ever had was in a CB club in Illinois and with a bunch of CBers in Rochester, NY. As far as the 'extra channels', what extra channels? Who 'owns' them? Check it out, I will not go into details (plus, I don't know and I'm too lazy! How's that for honesty?). As far as power, I, for the most part, don't care. I have stated it before (and taken my licks) that I can understand running 50 watts or so in the car since the skip (and overpowered stations locally) can make communications difficult or impossible beyond 3 or 4 miles in the daytime. I have no sympathy for the guys running a kilowatt or more. Why? I ran phone patches from Guam Island to the US (go look up the Mariannas Islands on your map or globe - try about 14 degrees North of the equator and South of Japan) with 100 watts. We had a guy running phone patches from Guam using only 20 watts! You don't need the 'killer-watts' unless you enjoy 'stomping' on others. Period. You may disagree, that is your right. You won't convince me otherwise. The reality is (and I suspect you already know this) that there are radio enthusiasts on both sides of the fence. We all enjoy communications. Therefore, it behooves us all not to slam each other! Period. There are a bunch of great folks on both sides of the fence. Period. 'Nuff said.

I agree with the job thing, James. Too many lazy chumps around. I heard something sort of what you said concerning down under. If I remember, what I was told is that an employable skill is a prerequisite before moving there and becoming a citizen. Don't know how true it is, but I remember being told that in the eighties. You appear to have done some considerable homework concerning what you were getting into. I'm probably preaching to the choir, but information is the most powerful weapon one can employ. Good luck with it.

Why would I want to read your other posts?

It is very clear that you don't have a clue about
amateur radio.

Here is a small clue: amateur radio is regulated
under part 97 not part 95.

If you wish to know what regulations amateurs
operate under, I suggest that you peruse part 97.

You might be surprised to find that amateur radio
operators can use almost any type of rig that
they want on the amateur bands.

Converting CB radios for use on Ten meters has
been going on for decades, and was really given a
boost when the 23 channel models were phased out
in the late 70's.

Yours in education.
Gary

You may want to take a look at the rec.radio.cb FAQ.
Here's a link: http://kd6tas.conk.com.

If you're old enough (or know someone who is old
enough) to remember what a telephone "party line"
was (or still is in some remote areas), imagine CB
as the biggest "party line" in existence.

If that's what you want to be a part of, buy a base
station radio (can also be a car (mobile) radio and
a battery and/or power supply (AC to DC converter))
and the biggest rooftop antenna you can find. To
get the most range, put that big, ugly antenna up
as high in the air as possible.

If you're a smart shopper, you should be able to get
what you need to put up a base station for $150.

Perhaps rules changed since 1967? Ya ever think maybe in 34 years some
revisions were made? Hmm? Maybe?

Once again - it's in black and white in the FCC Rules - Part 95, Subsection D.
A CB may not be modified. Period. End of discussion.

1621. Re: duplex possible on CB?

Source record: 76044

About 15yrs ago in the Los Angeles area there was a CB repeater called the Pirate system. It had several input freqs including 27mhz and some in the 49mhz and 460mhz range. The output was a conventional CB channel like 27. When I saw the system it had a several section helical filter in the 27mhz receiver and I think it used a separate antenna for that input. At the time it ran full duplex at about 350 watts from Palos Verdes, CA. The point is, yes you can duplex on CB fairly well with some separation between transmit and receive using cavities or other sharp filtering on the transmitter and receiver.
Good luck!

Dude - how can I put it in simpler terms? I can't write in crayon on the internet. There is no debate. Part 95, Subsection D specifically SAYS that a CB may NOT be modified. It goes on to say that if you DO modify a CB, it may no longer be operated. Disconnect it from the power supply, throw it in the junk box. Perhaps you can use the screws or knobs off of it some day to repair another radio. WHY ARE ALL THESE PEOPLE SO DAMN THICK HEADED?!

Before chosing an 11 meter vertical, I did some research and for the money, the IMax 2000 was the best bet, outperforming an A-99 with the ground plane kit for about the same cost, and it takes up less horizontal room. The A-99 works fine, but if you are in a harsh environment, it seems that the A-99 doesn't stand up that well over a long period of time.

>It is very clear that you don't have a clue about
>amateur radio.

Considering that I have been a ham since 1996, I would say I know 1 or 2 things about ham radio. Notice the VHF part of my "screenname".. maybe that should have tipped you off?

>Here is a small clue: amateur radio is regulated
>under part 97 not part 95.

Here's a small clue for YOU: We're talking about CB's, not ham radio. CB's are covered under Part 95.

>If you wish to know what regulations amateurs
>operate under, I suggest that you peruse part 97.

I don't, so I won't.

>You might be surprised to find that amateur radio
>operators can use almost any type of rig that
>they want on the amateur bands.

Except a CB. Read Part 95, Subsection D.
Actually, a ham can only use radios that don't transmit outside of the ham bands with the exception of MARS/CAP with the appropriate license.

>Converting CB radios for use on Ten meters has
>been going on for decades, and was really given a
>boost when the 23 channel models were phased out
>in the late 70's.

We all know it's being done. If you had been reading from the begining you would know that the original question was if a CB was legally allowed to be modified and it has been proven that according to Part 95, Subsection D, that a CB can not be modified. Therefore, a ham can not legally use a converted CB to talk on 10 meters.

Any other questions I can answer for you?

If you are referring to 95.425, you should be aware that these are the
regulations for operation of a Citizen's Band station. Modification
voids certification, and the radio can no longer be used for operation
under those regulations. It doesn't say that it cannot be used for
other legal purposes, such as 10m ham.

I guess people are "so damn thickheaded" because they can't read.

Actually, a ham can use any equipment he or she likes, but
transmitting is limited to the authorized bands.

>We all know it's being done. If you had been reading from the begining you
>would know that the original question was if a CB was legally allowed to be

There is no one in this country that has been convicted of modifying a
CB radio. That's because modification is not illegal: the use of
modified (non-type accepted) equipment by the operator of a Citizen's
Band station is illegal. The code is very clear about this.

Hi. Can anyone point me in the direction of the complete rules for CB radio operation in Canada? I have examined the FCC rules, and while the Canadians use FCC certification for type rating their CB radios, I do believe they have their own distinct set or regulations on the use of citizen's band radio. Any info you can send my way would be appreciated.

Thank you,
aiannone@nis.net

I disagree James.

I don't think that the Government should baby-sit anyone. They (the government) need to take care of their own problems. People who can't find work should get up off their lazy behinds and put some effort into finding one. Even if its flipping burgers at McDonalds. I respect these restaurant workers because it seems as if they know its a "crappy" job but they rather do it than to be waiting in line for an EBT paycheck that doesn't even pay the rent.

Obviously, people are relying on the government to come to their every beck and call. Why can't they take the initiative to help themselves instead of having someone kick start their lazy butts? Because Americans (not all but the ones that can't seem to fend for themselves) are too damned LAZY!

But this is just my own opinion.

How do you define the term "ham" or "Cber"? Both variants contain both legal and illegal stations - I tend to regard someone with a 7 kW linear on ham bands a freebander, just like any illegal CB freebander (I once marveled at a DA station's signal, then I heard his W friends' comments on his military linear...)
A legal Cb station is a good one, better than an illegal ham station.
Hopefully I didn't step on too many toes...

> Good luck!
>

You got it Mike. Amateur practice on two meters is the result of some of the regulations at the time a lot of wideband FM gear became available (part of the same problem that caused CB) so don't use it as a model. Tech class licensees could not go above 147 and FM was not legal below 146. So 600 kHz became the norm for the split between transmit and receive. No sane human being would have attempted it any other way.

The key is separation. There is no rule that says they have to use the same antenna or even the same site. Cavities at 11 meters are physically huge by the way.

Like so many other things, it can be done but why?

Ah Andy, Andy, Andy. You've been around the country and worked from HL, so I am so proud of you, but you haven't learned everything yet. While Part 95 distinctly indicates that it is illegal to modify a CB for continued operation, it certainly CAN be modified for use on 10 meters. Just remember in this case that is no longer a CB because it no longer transmits or receives in that bandwidth, and is no longer covered by Part 95. This is not to suggest that a radio capable of operating on both is legal--it isn't. As clearly stated, a device can not be modified in any way and still be legal for use on the CB channels. Hope you understand the distinction.

Now that I think about it ...

Every band has fixed limitations as to frequency, power, bandwidth,
mode, etc. A "ham" is one that operates within the limitations of the
bands allotted for amateur radio service, and a "CBer" is one that
operates within the Citizen's Band. Therefore, anyone that operates
outside the limits of their authorized band(s) can be considered a
"freebander".

Repeating the same nonsense over and
over will not make it true. You seem to be
unable to accept the fact that you are in error.

Get over it and move on.

Once again... read this slowly.

Part...95...only...covers...Citizens...Band.

Other radio services have other rules, and
surprise, surprise! Those rules allow many
things that are not allowed under part 95.

In as far as it goes, you are correct, a CB
radio cannot be modified for use on the
CB band, BUT and this is a big but, a
CB radio CAN be modified and used on
other bands.

Please open your eyes and realize that
part 95 does not regulate other radio
services.

Gary

> output, unless it's part of a repair. Modifying a CB to "RX" on 10 meters is
> not legal, not even for a ham.
>

That is simply NOT TRUE. You can do anything you want to the radio, including converting it to 10 meters, and using it there (assuming you're a licensed ham). But what you have to understand is the type acceptance part. By modifying the radio, you void the type acceptance, which means that it can no longer legally be used on 11 meter CB. But since the amateur radio service does not require type accepted radios, a modified CB is perfectly legal to be used on the ham bands. It's just that once you do this, you can not ever use it on CB again legally.

And BTW the adjustment is call a "POT", short for potentiometer, not a "POD".

>

You really need to quit now, before you really start looking bad. There
is NOTHING in any rule that says that you cannot convert a CB radio for
use on the ham bands. All that the rules say is that you cannot modify a
CB radio, without voiding type acceptance. Since type acceptance is NOT

required in the ham radio service, it's not an issue. It's only an issue with radio services that require type accepted radios (like CB).

I can not legally modify a CB to be used on a business band. I can't modify a CB to be used on another personal radio service (Assuming I was nuts enough to try).

I CAN modify a CB for 10, 12 or 6 meters, as those bands do not require type acceptance.

See the difference?

Dude, I give up.

If you are a ham, you are still wrong.

I see by your reply that you refuse to read the
regulations that govern your license, so it is
no surprise that you don't have clue.

A good question for you: Why are you so determined
to enforce part 95 here when it is readily apparent
that you have no understanding of part 97?

Again, please peruse part 97. Become familiar
with it. Then you won't look so silly when you
come to this NG and pontificate, OK?

BTW, welcome to ham radio.

Your screen name is indeed a giveaway
of your experience level and intent. Did
uncle Sam give you a nice present last
April 15th? I suspect that he did, and welcome.

But you still need to read part 97, and understand it.

Gary

PS: I did not hide behind a screen name, and I
will leave it up to you to determine MY experience
level and expertise with amateur radio.

>Actually, a ham can use any equipment he or she likes, but
>transmitting is limited to the authorized bands.

Actually, a ham can any equipment he or she likes, but it must not be able to transmit on anything but ham frequencies. For example, I own an Icom IC-V68 2m HT. This is an export HT. According to Icom, the FCC would not approve it for use on the ham bands in the US because it comes out of the box, able to transmit in the area of 132-174mhz.

>There is no one in this country that has been convicted of modifying a
>CB radio. That's because modification is not illegal: the use of
>modified (non-type accepted) equipment by the operator of a Citizen's
>Band station is illegal. The code is very clear about this.

I'm sure SOME people have been in trouble for modifying CB's - ones the FCC wanted to make an example of, but the fact remains that the FCC rules, Part 95, Subsection D SPECIFICALLY SAYS that Modification of a CB is not allowed. Go and read it and you'll see that I am right.

For those of you in the cheap seats, here is the proof that a CB is not allowed to be modified in any way, shape or form. I am not debating the morality of modifying a CB, if people have gotten in trouble for doing it, if hams modify CB's for 10 meters or even if it was legal at one point, which it may have been. Hell, I may have turned a pod or two inside of a CB in the past in order to get 2 or 3 more watts out of it, but I am only trying to dispell the myth that it is legal to modify a CB. This is the latest rule from the FCC and there is no discussion. It is here in black and white:

From http://www.reactintl.org/rules-cb.htm

Part 95 - Subpart D - Rules for CB Service
Citizens Band (CB) Radio Service

RULE 9 - Equipment
{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance'label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.

As you can see, it is clearly stated in part B of this rule "You must not make..any..modification to a..CB transmitter." (paraphrased) Also, it states that "Use of a transmitter which is not FCC type-accepted voids your authority to operate the station." There - so if you modify your CB and so much as turn that puppy on, you are violating the FCC rules.

And here's Rule 25, refered to in the above rule:

RULE 25 - Modifications to Transmitters {A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.

Again, it states "You must not make..any..modification to your CB transmitter."

Someone had told me to "prove it". How much more proof do you need?

I am beginning to think that everyone is missing the point of this thread. The guy that started it was calling the guy that had a website a dumbass for posting what he erroniously tought was was a CB sitting on a 10 meter ham frequency. The picture plainly shows a Cobra 148 DX+ which despite the name brand is a 10 meter ham radio. Last time I checked I was under the impression that 10 meter ham radios were still allowed on the 10 meter band. End of discussion. Type acceptance is not an issue, PERIOD. Why would anyone with a brain cell left want to argue the legalities of using a 10 meter radio on the 10 meter band?

For hams, it is still permissable to 'modify' a CB rig for 10 meter
operation, posess it and use it (on ham bands). Part 95 pertains only to CB
operation, not Ham.
--
__/__ __ /__
__ /__ __/__
_____/_____/___ /~

~~~~~~~~~~~~~~~~
Other than the above... your statements were essentially correct. Strictly
legally speaking, only a licensed radio technician (G.R.O.L or above) may
apply the 'golden screwdriver' to a CB and risks his license if the rig is
modified outside of Part 95 parameters (EXCEPT for the case of a Ham
modifying it for use ONLY on Ham bands).

That STILL does not preclude changing a CB radio over to 10 meters by
a licensed ham. Those rules that you quote apply to a CB transceiver
being operated in the CB band. Type acceptance applies. Type accept-
ance does NOT apply in the Amateur Service. Two different sets of
rules apply to the two different services. NOW! If I make the modi-
fications, as a licensed ham, to cause the CB to operate EXCLUSIVELY
within 10 meters, then the rules that apply to the CB service no longer
apply because the set no LONGER operates on 11 meters!! It is now sub-
ject to the AMATEUR Service rules. Now if I cause it to operate in
BOTH services, then I am in violation of FCC rules. I read the rules
you quoted, and nothing within these rules preclude me from doing the
above.

Incidentally, those rules are intended to prevent illegal CB operations.
They do NOT prevent hams from experimenting/changing a CB to operate
as a HAM radio. Seems pretty clear to me.

Once again - it's in black and white in the FCC Rules - Part 95, Subsection D. A CB may not be modified. Period. End of discussion.

You want to piss up a rope, fine. I'll try once more. You are quoting from part 95 which applies only to CBERS. IT DOES NOT PERTAIN TO AMATEURS! If you want to believe otherwise, you are certainly entitled.

Part 95 applies to ANYONE using a CB, INCLUDING hams. Therefore, a ham must comply with the Part 95, Subsection D rules, which strictly forbid ANYONE from modifying a CB. Even hams.

If there is an FCC rule someplace that says that a ham may modify a CB, please direct me to it. If it exists, then the FCC is contradicting itself.

I am beginning to think that everyone is missing the point of this thread. The guy that started it was calling the guy that had a website a dumbass for posting what he erroniously tought was was a CB sitting on a 10 meter ham frequency. The picture plainly shows a Cobra 148 DX+ which despite the name brand is a 10 meter ham radio. Last time I checked I was under the impression that 10 meter ham radios were still allowed on the 10 meter band. End of discussion. Type acceptance is not an issue, PERIOD. Why would anyone with a brain cell left want to argue the legalities of using a 10 meter radio on the 10 meter band?

Exactly.

OOOooooooo! A ham since 1996!~ WOW! I'm impressed! NOT! Your screen name does indeed *indicate* what you know. Once again, there are 2 different sets of regulations for the two SEPARATE services. Part 95 (CB) requires type acceptance. Part 97 does NOT. Uh, that's the ham regs you claim to know. Once again ~slowly~. IF I modify a CB to produce more power, defeat the modulation limiter, or have "extra" so-called 'channels", I am in violation of Part 95, FCC Rules. There is NO type acceptance requirement in Part 97. Therefore, if I modify a CB set to operate exclusively within the 10, 12, or 6 meter bands, and it NO LONGER will operate on 11 meters, then the radio is perfectly legal to use, and you can whine to Riley Hollingsworth til you're blue in the face, to no avail. Read my lips, son: Part 95 no longer applies because the radio no longer operates within the band covered by said rules. And THAT is the way it REALLY IS!

And BTW, I have been into many forms of radio for 40 years, was licensed in 1989 as a ham, have the Advanced ticket, and *I* know a couple of things about the rules, too~~~~~~~~~~~sonny!

Howdy, a matcher will not change the resonant frequency of a antenna.
The matcher uses a capacitive/inductive circuit to change the load Impedance
to match
the input Impedance of the transceiver, if you adjust the tuning rings all
the way down
on a A99 the SWR will still be lower on 27.405 and higher on 26.965.
This indicates the antenna is too short for that bandwidth.
This is why it makes a fine 10meter antenna but leaves a little to be
desired on 11meter.
If you enjoy freebanding (which is illegal) the antenna works great in the
attic.
Check out the "firestik fire-up 99", it is a specially engineered
replacement top-section
designed to enhance the A99. http://www.firestik.com

I agree AND disagree. In an ideal society, we all would have the choice of a prestigious job. Reality is a bit different. I do think that there are too many lazy people that don't like to work. Is it a problem? Only when tax dollars go to them for any reason. In other words, I do believe one should have the right to NOT work, if one so chooses, but at the same time, if this person can not pay their own way, I believe this entitles them to nothing from us. Guarantee a job? Hmmm. How about if every American born that WANTED a job, was guaranteed one before the immigrants? This could solve a mess of problems. Anyone living in a border state can tell of the multitudes of illegals in the country. Take the official government estimates of illegals in the country, and DOUBLE it, now we are close to a real figure. How about women's lib? I don't mean holding doors and equal rights BS. I mean the work force. Reverse women's lib and what have we? Why, we have a country with so many high dollar jobs suddenly available, that, doggone it, the average family no longer needs two incomes. Dad can go to work and make a liveable wage to support the family AND some extras with REAL insurance (remeber that?), and mom has all the time in the world to take care of whatever she needs to. Funny thing, that women's lib. Can't blame the women of today. Nope. Moms and grandmas screamed for equal work and pay. Now that they have it, the majority of today's women with families would like nothing more than to stay home and go back to the way it was. The women today realize it's a hell of a struggle to work AND raise kids. We have a nation of latchkey kids raised in the last generation. And, they're pissed. Not a problem, but over what? My generation sang about war and love and social change. We were pissed, but over good reason. Then came disco. Everyone was too coked out on decadence and shitty music to really be pissed then. Then came punk. They were pissed because they were outcasts, self-exiled, but outcasts nonetheless, and they sang about it. Then came metal. They were pissed over causes as well. Some, again, were self-imposed, but it didn't stop them. They had reasons. Now we have this nation of kids who are pissed and don't even know why. They have more disposable income than ever before, more material and tangibles than any teen generation before them, singing about....ANGER. This is the same generation that will pull a gun as soon as look at you.This is the angriest generation. This is the scariest generation. One simple question. Why? With all these kids have today, what in hell can they possibly be angry about? Picked on? Tough. Part of growing up. You take your lumps and move on (hopefully to find a big stick). Maybe a parent at home when the kids get home would be a start, instead of Nintendo and TV being the babysitter.

No water, my friend. Water tables are at a 200 year low. The Everglades are actually in danger of burning. My favorite rivers to kayak and canoe are now a muddy trek. The gators are pissy as hell because of the lack of water and are in a very agitative state. Best to stay out of their known haunts for awhile. That leaves fishing for some snook. I don't know if the turtles are on the beaches yet or not. Sometime in the spring...

I don't think you need a license anymore. The FCC has pretty much given up regulating much of anything. The only things I can think of off hand REQUIRING the GROL are maritime radios and aircraft communications devices. Pretty much they simply suggest servicing by a 'qualified' individual (whatever that means). I think I was the only licensed individual in the shop when I used to work on VHF/UHF/trunking radios. The guys would take courses, but there were no licenses issued. The best rule of thumb is take your radio to someone who has some good recommendations - even if you pay a bit more, hopefully you get what you pay for.

Get this thru your thick fucking head ...
We all agree you cannot modify a CB for CB Use, But you certainly can
modify a CB if you are a Ham and use it on the ham bands, We know it cannot
be used on CB legally after this point... other than that why Argue with
this ignorant VHF Buff who hasn't a clue about H.F. Btw, I saw your picture
and you do look like you suck a little dick now and again ... .

That same Cb can now be used by a ham on the ham bands and that same cb would be completly legit... We know it is not legit on the CB band Are you saying that as well NO ...

A few definitions: "You" refers to a person in the operation of a CB
station. "Equipment" to be used for a CB station is defined in this
section.

>Part 95 - Subpart D - Rules for CB Service
>Citizens Band (CB) Radio Service
>
>RULE 9 - Equipment
>
>{A} You must use an FCC type accepted CB transmitter at your CB station.

Key word here is "CB station". If these rules were to apply to any
other station or any other operator, it would specifically say so.

> You
>can identify an FCC type accepted transmitter by the 'type acceptance'label
>placed on it by the manufacturer. You may examine a list of type-accepted
>equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter
>which is not FCC type-accepted voids your authority to operate the station.
>{B} You must not make, or have made, any internal modifications to a
>type-accepted CB transmitter.

The FCC is referring to the radio that the operator is using for his
CB station. There has been no other reference to indicate otherwise.

> (*read Rule 25) Any internal modification to a
>type-accepted CB transmitter cancels the type-acceptance, and use of such a
>transmitter voids your authority to operate the station.
>
>As you can see, it is clearly stated in part B of this rule "You must not
>make..any..modification to a..CB transmitter." (paraphrased)

Paraphrased, "You, in the operation of a CB station, must not modify a
type-accepted CB transmitter for use with a CB station; and you, in
the operation of a CB station, must not use a transmitter for your CB
station that is not type-accepted."

> Also, it states
>that "Use of a transmitter which is not FCC type-accepted voids your authority
>to operate the station." There - so if you modify your CB and so much as turn
>that puppy on, you are violating the FCC rules.

No it doesn't. It says just what it says, which is: If you, in the
operation of your CB station, use a CB transmitter that is not
type-accepted, you no longer have permission to operate your CB
station.

>And here's Rule 25, refered to in the above rule:
>
>RULE 25 - Modifications to Transmitters {A} You must not make or have any one
>else make any internal modification to your CB transmitter.
>{B} Internal modification does NOT include:
>[1] Repair, or servicing of a CB station transmitter; or
>[2] Changing plug-in modules which were type-accepted as part of your CB
>transmitter
>{C} You must not operate a CB transmitter which has been modified by anyone in
>any way, including modification to operate on unauthorized frequencies or with
>illegal power.
>
>Again, it states "You must not make..any..modification to your CB transmitter."
>
>Someone had told me to "prove it". How much more proof do you need?

Proof logical thought and of reading comprehension.

2 Meter "skip" is a product of "Ducting" not from any atmospheric result. Do you know what ducting is??

If anybody could help me with this dilemma, I would appreciate it. My question is which cb is better for all around use? The Cobra Ultra II, or the Uniden Pro520?
Any info on this matter would be greatly appreciated.

that would be tropospheric ducting maybe you can look it up on the net.

Excude me I had misstated and used the word atmospheric.. where ducting
does actually occur..
Most everyday amateur communication using VHF (and above) bands relies on
non-ducting tropospheric propagation. Although at certain times of the year,
and over certain paths, spectacular QSOs are achieved by tropospheric
ducting, or via the ionosphere, scatter and refraction below the tropopause
(between 8 and 20 km above the earth) remain our mainstay.

Max, I'm not suggesting a hand out. I am suggesting that work be made available to those who want it. I honestly believe employment figures are just a bit bogus. Now I see in the paper that it is believe that the number of illegal immigrants has been way underestimated (best 'guess' is by 50%) and they believe that has held back wage increases (if employment levels are too low, wages are supposed to go up). This is why Uncle Sam tries to keep unemployement up a bit - to spare companies from having to pay too much. This is typical government policy - allow energy 'distribution' charges to be passed on with the result the large industries around here pay not much over 8 cents per killowatt hour whilst I pay over 12 cents. Doesn't matter, Republican or Democrat. One champions welfare for big business; the other sponsers welfare for the masses. Please don't misinterpret my post, however. I am suggesting that jobs should be made available to folks that WANT to work. Unemployment figures are based upon people collecting unemployment - which ends after a period of time, you know. Someone in the street who wants a job is not counted as unemployed. Makes for good press. Everything is just fine, thanks.

Not necessarily.. Depends on your location and all kinds of other crap.
Altitude above the receiving station... Yada, yada, yada...

I have achieved distances of up to 50 to 60 miles (On AM) mobile with a C148
and a W1000 while sitting on top the local hill. You go down on the regular
flat-land, and I have achieved upwards of 25 to 35 miles (also on AM). On a
regular basis when skip is low (evenings / nights) I routinely get out a
minimum of 10 to 15 miles in the flats, and 30 to 35 on the hilltop.....

I live in an area rich in iron ore, and it is also rather hilly, as well as
fairly dense in the wooded department. All factors that act against my
signal, yet I have no problem achieving such results...

Bottom line, depends on your surroundings...
